FOREWORD

1. This standard is approved for use by all departments and agencies of the Department of Defense (DOD) and available for use by non-DOD entities (e.g., first responders, United Nations, and multinational partners).

2. This standard provides a standardized, structured set of graphical symbols for the display of information in command and control (C2) systems and applications. A standard method for symbol construction is provided using common building blocks which shall be used to create current symbol sets as well as for creating sets that may be needed in the future. This includes frame, icon, modifier, and amplifier using color, graphic, and alphanumeric representations. It provides requirements for symbol construction and composition with flexibility for special user's needs.

3. In joint military operations, it is imperative to have a common language clearly understood among all users. Graphical representation of objects of interest (e.g., units, installations, equipment, control measures, activities, and meteorological occurrences) are observed and readily understood faster than merely text alone. This is valid even more for a user population with a widely different background of language, component, knowledge, and experience. A common standard of joint military symbols is therefore an important element to enhance efficiency and to contribute to success in joint operations.

4. This revision has resulted in many changes to the standard, but the most significant ones are as follows:

a. Restructuring of the standard to build symbols from components, including frame, icon, first modifier, second modifier, and amplifiers, rather than pre-define all possible symbols.

b. Aligning more closely with North Atlantic Treaty Organization (NATO) Standardization Agreement (STANAG) 2019/Allied Procedural Publication (APP)-6(C), NATO Joint Military Symbology.

c. Realigning appendixes into space, air, land, sea surface, subsurface, activities, control measures, meteorological and oceanographic (METOC), signals intelligence (SIGINT), three dimensional, and cyberspace.

5. Comments, suggestions, or questions on this document should be addressed to Defense Information Systems Agency (DISA) Standards Management Branch (EE32), P.O. Box 549, Ft. Meade, MD 20755-0549, or emailed to disa.meade.EE.mbx.symbology@mail.mil. Since contact information can change, you may want to verify the currency of this address information using the ASSIST [Acquisition Streamlining and Standardization Information System] online database at https://assist.dla.mil/.

1 SCOPE

1.1 Scope. This military standard (MIL-STD) establishes the rules and requirements to develop and display joint military symbology within the Department of Defense (DOD) and non-DOD entities.

2 APPLICABLE DOCUMENTS

2.1 General. The documents listed in this section are specified in sections 3, 4, or 5 of this standard. This section does not include documents cited in other sections of this standard or recommended for additional information or as examples. While every effort has been made to ensure the completeness of this list, document users are cautioned that they must meet all specified requirements of documents cited in this standard, whether or not they are listed.

2.2 Government documents.

2.2.1 Specifications, standards, and handbooks. The following specifications, standards and handbooks form a part of this document to the extent specified herein. Unless otherwise specified, the issues of these documents are those cited in the solicitation or contract.

INTERNATIONAL STANDARDIZATION AGREEMENTS (STANAG)(NATO)

STANAG 1166	-	Standard Ship Designator System
STANAG 1241	-	NATO Standard Identity Description Structure for Tactical Use
STANAG 2019/APP-6	-	NATO Joint Military Symbology
STANAG 2511	-	Intelligence Reports
STANAG 5522	-	NATO Improved Link Eleven (NILE) - Link 22

DEPARTMENT OF DEFENSE (DOD) STANDARDS

MIL-STD-1472	-	Department of Defense Design Criteria Standard: Human Engineering
MIL-STD-1787	-	Aircraft Display Symbology
MIL-STD-2401	-	Department of Defense World Geodetic System (WGS)
MIL-STD-3011	-	Joint Range Extension Application Protocol (JREAP)
MIL-STD-6016	-	Department of Defense Interoperability Standard: Tactical Data Link (TDL) Link-16 Message Standard
MIL-STD-6017	-	Department of Defense Interoperability Standard: Variable Message Format (VMF) Message Standard

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

MIL-STD-6018	-	Department of Defense Interface Standard: Integrated Broadcast Service (IBS) Common Message Format (CMF) Standard
MIL-STD-6040	-	Department of Defense Interface Standard: United States Message Text Format (USMTF) Description

(Copies of these documents are available online at https://assist.dla.mil/, http://quicksearch.dla.mil/ or from the Standardization Document Order Desk, 700 Robbins Avenue, Building 4D, Philadelphia, PA 19111-5094.)

2.2.2 Other Government documents, drawings and publications. The following other Government documents, drawings and publications form a part of this document to the extent specified herein. Unless otherwise specified, the issues of these documents are those cited in the solicitation or contract.

JOINT PUBLICATIONS (JP)

JP 1-02	-	Department of Defense Dictionary of Military and Associated Terms
JP 3-0	-	Joint Operations
JP 3-09	-	Joint Fire Support
JP 3-52	-	Joint Airspace Control
JP 3-59	-	Meteorological and Oceanographic Operations

(Copies of these documents are available at https://jdeis.js.mil/jdeis/.)

NATIONAL GEOSPATIAL-INTELLIGENCE AGENCY (NGA) STANDARD

NGA.STND.0033 - Geopolitical Entities, Names and Codes (GENC) Standard

(Copies of this document are available online at https://nsgreg.nga.mil/genc/registers.jsp.)

2.3 Order of precedence. Unless otherwise noted herein or in the contract, in the event of a conflict between the text of this document and the references cited herein, the text of this document takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

3 DEFINITIONS

3.1 Acronyms and abbreviations used in this standard. The acronyms used in this standard are defined as follows:

AAP	Allied administrative publication
ADP	Army doctrine publication
ADRP	Army doctrine reference publication
AOU	area of uncertainty
APP	allied procedural publication
ASSIST	Acquisition Streamlining and Standardization Information System
C2	command and control
CBRN	chemical, biological, radiological, and nuclear
CIE	Commission Internationale de l'Eclairage
DISA	Defense Information Systems Agency
DOD	Department of Defense
DR	dead reckoning
HSL	hue, saturation and luminance
ISO	International Organization for Standardization
JP	joint publication
JSSG	Joint Service specification guide
METOC	meteorological and oceanographic
MIL-STD	military standard
NATO	North Atlantic Treaty Organization
RGB	red, green, blue
SIGINT	signals intelligence
STANAG	NATO standardization agreement
USMTF	United States message text format
VMF	variable message format

3.2 Definitions used in this standard. Terms used in this document are defined as follows. The source of the definition is cited in parentheses. Unless otherwise annotated, this publication is the proponent for all terms and definitions found in the glossary.

3.2.1 Amplifier. Optional text or graphics that provide additional information about a symbol and are always located outside the frame area.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

3.2.2 Area. 1. A flat piece of ground or open space. 2. A distinct space or surface, or one having a special function. (Refer to FM 1-02 for the definition of specific types of areas.)

3.2.3 Assumed friend. A track which is assumed to be a friend because of its characteristics, behavior, or origin. (STANAG 1241)

3.2.4 Atmospheric environment phenomena. A term used to describe natural phenomena occurring in the envelope of air surrounding the Earth, including its interfaces and interactions with the Earth's solid or liquid surface.

3.2.5 Attribute. A distinctive feature or characteristic such as line, shape, color, texture (fill), edge, mass and value.

3.2.6 Boundary. A line that delineates surface areas for the purpose of facilitating coordination and deconfliction of operations between adjacent units, formations, or areas. (JP 1-02)

3.2.7 C2 (Command and Control). The exercise of authority and direction by a properly designated commander over assigned and attached forces in the accomplishment of the mission. Command and control functions are performed through an arrangement of personnel, equipment, communications, facilities, and procedures employed by a commander in planning, directing, coordinating, and controlling forces and operations in the accomplishment of the mission.

3.2.8 Civil support. Department of Defense support to US civil authorities for domestic emergencies and for designated law enforcement and other activities. (JP 1-02) An overarching term encompassing various military missions, tasks and activities conducted inside the United States in coordination with other instruments of national power to maintain or reestablish a safe and secure environment, provide essential governmental services, emergency infrastructure reconstruction and humanitarian relief.

3.2.9 Combat effectiveness. The ability of a unit to perform its mission. Factors such as ammunition, personnel, fuel status, and weapon systems are evaluated and rated. (ADRP 1-02)

3.2.10 Commission Internationale de l'Eclairage (CIE). A color space chart widely used to describe the range of color seen by the human eye.

3.2.11 Contact. In air intercept, a term meaning, "Unit has an unevaluated target."

3.2.12 Control measure symbol. A category of joint military symbology that provides information about objects necessary for battlefield planning and management.

3.2.13 Defended area. An area the Source Track Number (STN) is capable of defending against ballistic missiles, etc, (i.e., the Source TN is operational with ready weapons and has designated the area for defense). (MIL-STD-6016)

3.2.14 Dynamic amplifier. An amplifier whose size and placement are based on the attributes of an object and can change as these attributes and the scale of the background change.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

3.2.15 Engineering design symbology. Symbology used to design, plan and develop engineering drawings in the chemical, electrical, civil, mechanical and structural engineering fields.

3.2.16 Faker. A friendly track acting as a hostile for exercise purposes. (STANAG 1241)

3.2.17 Field. A defined area in which a limited combination of alphanumeric and other characters, amplifiers and/or abbreviations are grouped/situated in an established way around a symbol/icon, line, area, point, or boundary and used for the purpose of providing additional information about the associated object or operational environment geometry.

3.2.18 Frame. The geometric border of a symbol that provides an indication of the standard identity, battle dimension and status of a joint military object.

3.2.19 Friend. A track belonging to a declared, presumed or recognized friendly nation, faction or group. (STANAG 1241)

3.2.20 Geospatial intelligence (GEOINT). The exploitation and analysis of imagery and geospatial information to describe, assess and visually depict physical features and geographically referenced activities on the Earth. Geospatial intelligence consists of imagery, imagery intelligence and geospatial information. Also called GEOINT. (JP 2-03)

3.2.21 Graphic. Any and all products of the cartographic and photogrammetric art. A graphic may be a map, chart, mosaic or even a film strip that was produced using cartographic techniques. (AAP-6)

3.2.22 Hostile. A track whose characteristics, behaviour or origin indicate that it is a threat to friendly forces. Designation as hostile does not necessarily imply clearance to engage. (STANAG 1241) In identification, the designation given to a track, object or entity whose characteristics, behaviour or origin indicate that it is a threat to friendly forces. Designation as hostile does not necessarily imply clearance to engage. (AAP-6)

3.2.23 Icon. The innermost part of a symbol that provides a graphic representation of an object.

3.2.24 Icon-based symbol. A category of joint symbology that provides information about the standard identity, battle dimension, status and mission of an object.

3.2.25 Installation. A grouping of facilities which support particular functions. Installations may be elements of a base.

3.2.26 Interoperability. The condition achieved among communications-electronics systems or items of communications-electronics equipment when information or services can be exchanged directly and satisfactorily between them and/or their users. The degree of interoperability should be defined when referring to specific cases. (JP 1-02)

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

3.2.27 Joint military symbology. Symbology used to plan and execute joint military operations in support of C2 functions. These symbols fall into two basic categories: icon-based symbols and control measure symbols.

3.2.28 Joker. A friendly track acting as a suspect for exercise purposes. (STANAG 1241)

3.2.29 Kilo. A friendly track of special interest. (STANAG 1241)

3.2.30 Lollipopping. The placing of a symbol above the ground surface on a map using a marker post. The user can set an arbitrary height above the ground surface and drop down lines connecting the symbol to its ground location without having the symbol actually cover the location on the map.

3.2.31 Meteorological symbology. Symbology used in weather/climatic forecasting.

3.2.32 Modifier. A pictorial or alphanumeric component that provides additional information about the icon and are always located inside the frame area.

3.2.33 Neutral. A track or contact whose characteristics, behaviour, origin, or nationality indicate that it is neither supporting nor opposing friendly forces. (STANAG 1241)

3.2.34 Oceanic environment phenomena. A term used to describe natural phenomena occurring on or below the surface of the earth's oceans and seas.

3.2.35 Operational environment. A composite of the conditions, circumstances and influences that affect the employment of capabilities and bear on the decisions of the commander. (JP 1-02)

3.2.36 Ownship. The visual representation of the ship that the operator is currently occupying.

3.2.37 Pending. Tracks which have not been subject to the identification process but which are available for reporting may be reported with a status of pending. (STANAG 1241)

3.2.38 Point. A position, place, spot, or locality. (Refer to FM 1-02 for the definition of specific types of points.) A symbol that has only one set of coordinates.

3.2.39 Signals intelligence (SIGINT). 1. A category of intelligence comprising either individually or in combination all communications intelligence, electronic intelligence, and foreign instrumentation signals intelligence, however transmitted. 2. Intelligence derived from communications, electronics, and foreign instrumentation signals. (JP 1-02)

3.2.40 Staff. A straight line used as a headquarters amplifier in a symbol or used to connect a symbol with its location on a map, chart, or display. The free end of the staff indicates the direction or the intended direction of movement of the track or object.

3.2.41 Static amplifier. An amplifier whose size and placement are fixed and remain constant.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

3.2.42 Suspect. A track that is potentially hostile because of its characteristics, behavior, origin, or nationality. (STANAG 1241)

3.2.43 Symbol. A graphic object that presents information.

3.2.44 Symbol identification code (SIDC). A numeric code based on a hierarchical structure that provides the elements required to construct the basic symbol.

3.2.45 Text. Words, alphanumeric information and other American Standard Code for Information Interchange (ASCII) characters used to define or further designate the meaning of a symbol.

3.2.46 Track. 1. A series of related contacts displayed on a data display console or other display device. 2. To display or record the successive positions of a moving object. 3. The actual path of an aircraft above or a ship on the surface of the earth. (JP 1-02) The course is the path that is planned; the track is the path that is actually taken.

3.2.47 Traveler. A suspect surface track following a recognized travel route. (STANAG 1241)

3.2.48 Unknown. An evaluated track that has not been identified. (STANAG 1241) An identity applied to an evaluated track that has not been identified. (JP 1-02)

3.2.49 Zombie. A suspect air track conforming to air traffic control (ATC) rules or following a recognized traffic pattern. (STANAG 1241)

4 GENERAL REQUIREMENTS

4.1 Command and control symbols. The symbol sets encompass the graphic representation of units, equipment, installations and other elements and activities relevant to joint military operations. They contain the building blocks for joint symbols from the air, land, maritime (sea surface and subsurface) and space physical domains.

4.2 Other symbols. This standard also contains standardized symbols and figures for control measures, meteorological and oceanographic (METOC), signals intelligence (SIGINT) and activities.

4.3 Joint military symbology sets. Figure 1 shows the joint military symbology sets available for planning and conducting joint operations.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

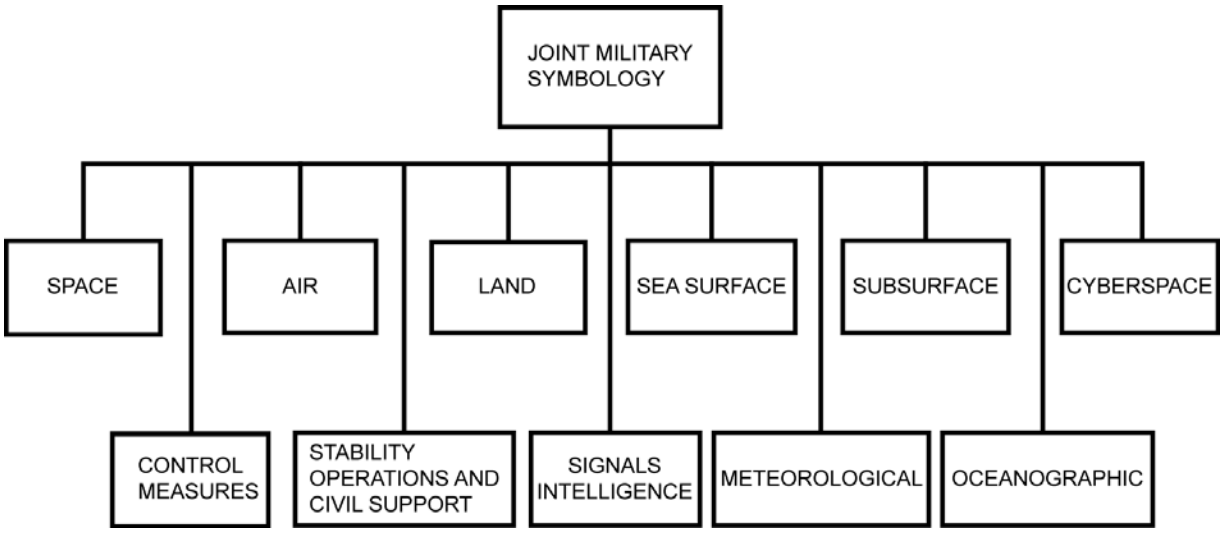

FIGURE 1. Joint military symbology sets.

4.4 Monochromatic and hand-drawn symbols. While the focus of this publication is the display of symbols in modern multi-chromatic electronic systems, all symbols should be usable in monochromatic systems and as hand-drawn symbols.

4.5 Symbol recognition and legibility. When engineering and designing symbols and composing their building blocks, consider human factors; such as, symbol recognition and legibility across a variety of illumination conditions, map backgrounds, symbol sizes, display types and resolutions, and mental and physical fatigue.

5 DETAILED REQUIREMENTS

5.1 Objective. To promote interoperability at the information level within the area of joint military symbology, it is necessary to define a standard set of rules for symbol construction and generation to be implemented in C2 systems. The rules in this standard are considered to be the minimum necessary to ensure that information about joint military symbology is exchanged successfully across service and organizational boundaries. These rules are not intended to constrain the manner in which the symbology is used.

5.2 Organization. This section provides the detailed requirements concerning the composition, construction, display and transmission of tactical symbols and control measure symbols considered essential to achieve interoperability. Display rules are provided which allow the degree of complexity of the resulting symbology to be tailored to operational requirements and system capabilities. Additional implementation guidance is provided in each appendix as it applies to the particular symbology set.

5.3 Icon-based symbols. Icon-based symbols represent units, equipment, installations, activities and meteorological occurrences. An icon-based symbol can be composed of a frame, fill, icon, modifiers and amplifiers (see figure 2). These elements are located within and around a virtual bounding octagon. The components of an icon-based symbol provide information about the standard identity, battle dimension, status and mission of an operational object. The

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

placement and display options of the various elements are explained in the following paragraphs. When representing unorthodox platforms, select the most appropriate icon from the standard.

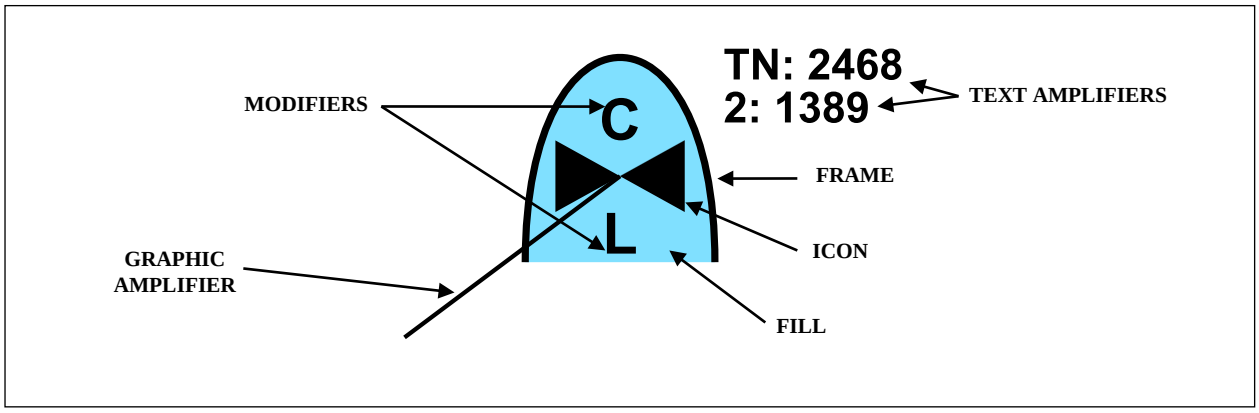

FIGURE 2. Icon-based symbol components.

5.3.1 Bounding octagon. The bounding octagon serves as the spatial reference for the relative sizing and placement of frames, icons and modifiers. The default length and height of the bounding octagon is L (see figure 3). L is measured from point to opposite point in the octagon. The bounding octagon shall not be displayed in a symbol. The bounding octagon appears in example symbols throughout this document for clarification purposes only.

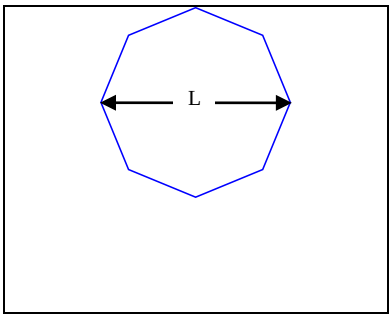

FIGURE 3. The bounding octagon.

5.3.1.1 Bounding octagon and frames. The size and placement of frames shall be determined by the size of the bounding octagon. Frame length and height shall vary from 1L to 1.5L depending on the particular frame. See figure 4 for sizing requirements of the basic frames relative to the bounding octagon. See 5.3.2 for more information on frames.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

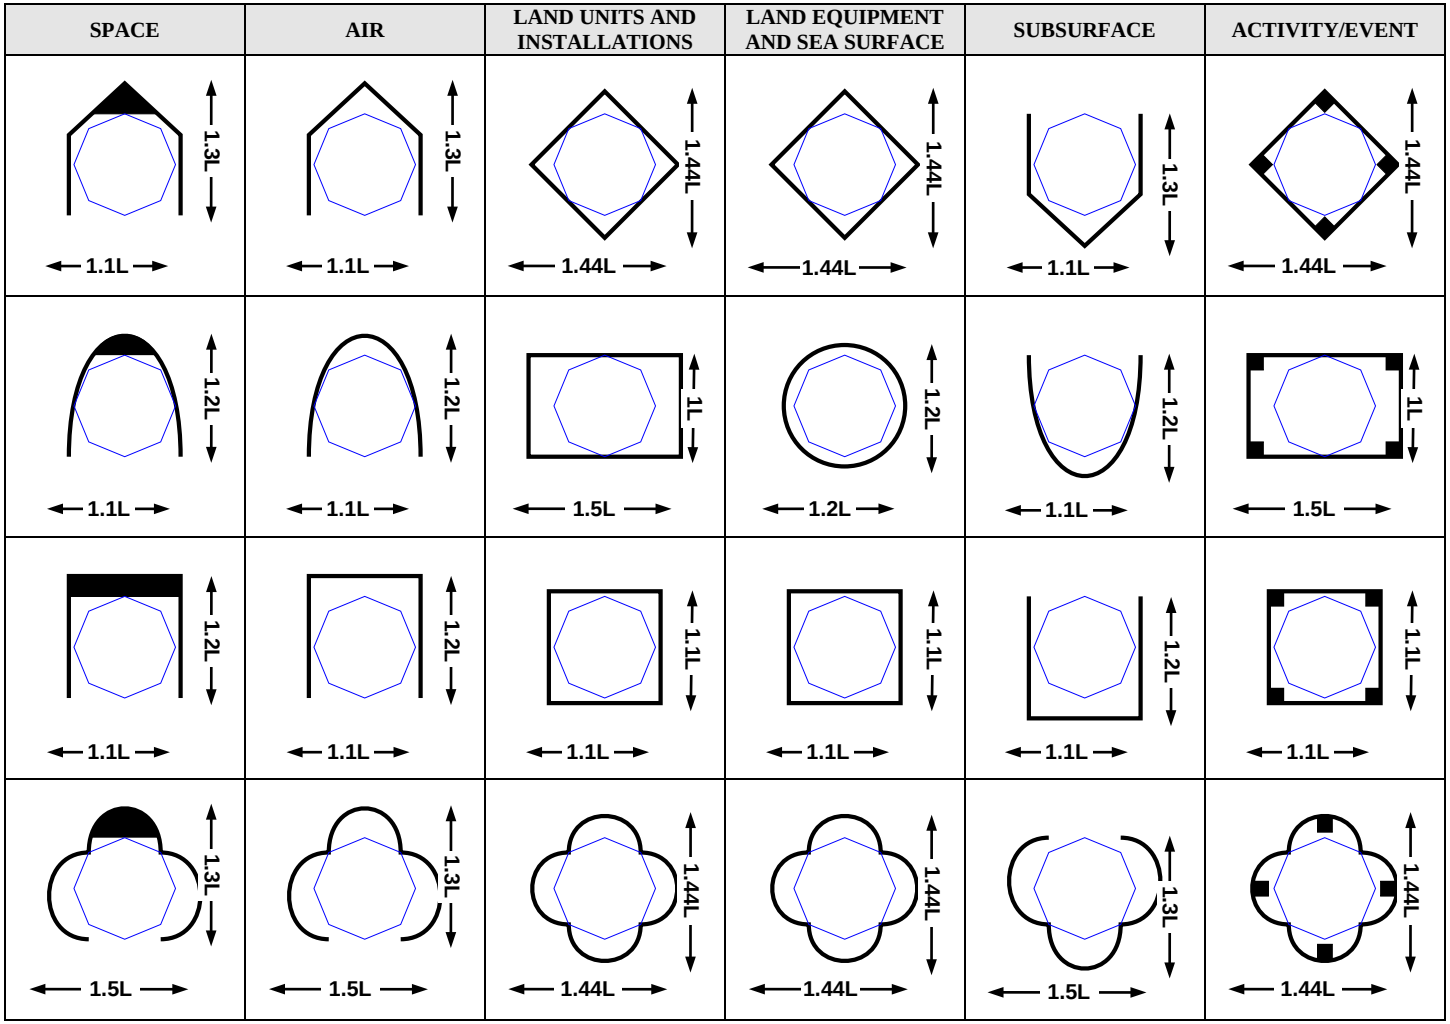

FIGURE 4. The bounding octagon and frame sizes.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

5.3.1.2 The bounding octagon and icons/modifiers. The bounding octagon is divided into three horizontal sectors (main, 1 and 2) to specify positioning and sizing of icons and modifiers. Icons shall be placed in the main sector while modifiers are placed in sectors 1 and 2. Specific icons/symbols, as identified in the standard, require the sectored bounding octagon to be rotated 90 degrees counterclockwise to create vertical sectors. Figure 5 shows the horizontal and vertical sectored bounding octagons. Icons shall not exceed the dimensions of the main sector of the bounding octagon or touch the interior border of the frame. To optimize legibility, icons may be enlarged within the constraints of the bounding octagon when one or no modifiers are displayed. The dimensions of unframed icons shall be the same as framed icons. See 5.3.4 for more information on icons. Modifiers shall not exceed the dimensions of sectors 1 and 2. See 5.3.5 for more information on modifiers.

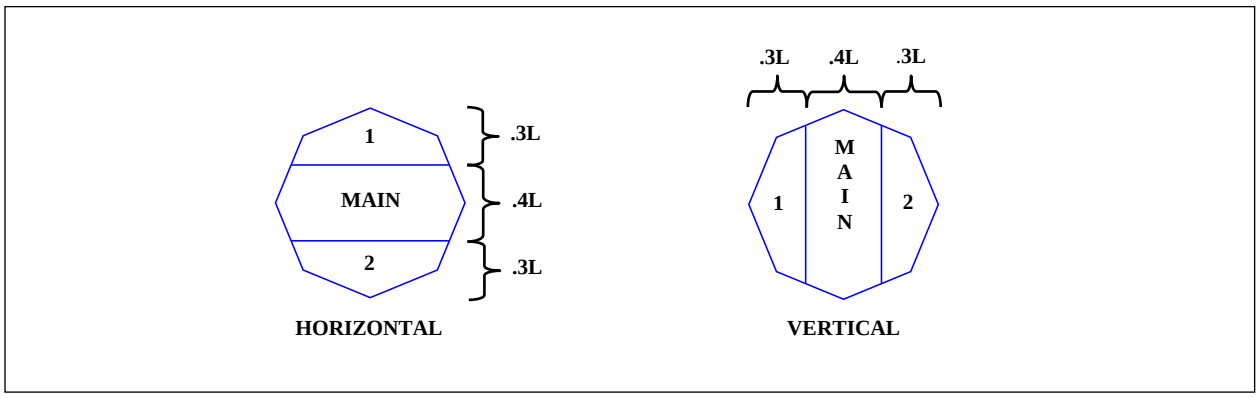

FIGURE 5. The bounding octagon with horizontal and vertical sectors.

5.3.2 Frame. The frame is the border of a symbol. A frame shall be optionally depicted in only two cases: land equipment and sea surface civilian vessels. Natural event symbols are unframed. When a frame is included in a symbol, its shape indicates the standard identity, dimension and status of the object. A frame can be black or white depending on display background. When the symbol is unfilled, the frame should be depicted using the default colors as specified in 5.5 to provide enhanced presentation information about standard identity. Table I provides the frame shapes that shall be used during real-world, non-exercise situations. Table II provides the frame shapes that shall be used during exercises. Table III provides the frame shapes that shall be used during simulations. If training tracks are displayed, they shall be identified by adding “-T” to the “X” in the exercise frame (see figure 6).

Check the source to verify that this is the current version before use.

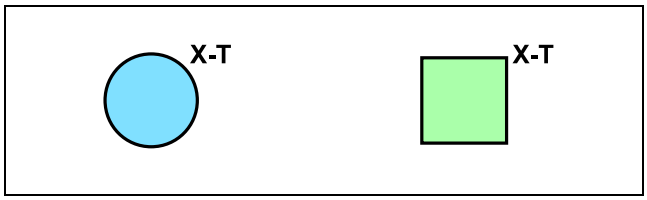

FIGURE 6. Friend and neutral exercise training tracks.

5.3.2.1 Standard identity. The standard identities are unknown, assumed friend, friend, neutral, suspect and hostile. In addition, pending is a valid condition but not considered a standard identity. Figure 7 shows assumed friend and suspect frames on various backgrounds.

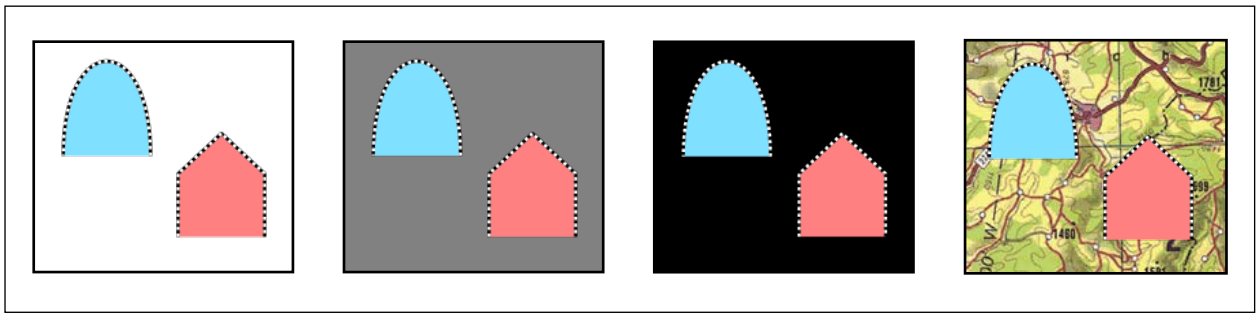

FIGURE 7. Assumed friend and suspect frames on various backgrounds.

5.3.2.2 Domain. The domains are air, land, sea, space and cyberspace. The air domain is above the surface of the earth to the exosphere. The land domain includes the ground and below its surface. The sea domain includes on and below the water's surface. The space domain is above the exosphere. The cyberspace domain is characterized by the use of electronics and the electromagnetic spectrum.

5.3.2.3 Status. Status depicts whether an object exists at the location identified (status is "present"), will in the future reside at that location (status is "planned" or "anticipated"), or is thought to reside at that location ("suspected"). The symbol frame will be a solid or black and white dotted line when indicating a present status and a dashed line when indicating anticipated, planned, or suspected status (see table IV). When the frame is assumed friend, suspect, or pending, the status will not be displayed.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

TABLE IV. Friend frames shown in present and planned status.

DIMENSION / STATUS	SPACE	AIR	LAND UNIT	LAND EQUIPMENT AND SEA SURFACE	LAND INSTALLATION	SUBSURFACE	ACTIVITY/ EVENT
PRESENT OR CONFIRMED POSITION							
ANTICIPATED, PLANNED OR SUSPECTED POSITION							

5.3.3 Fill. The fill is the interior area within a frame. In framed symbols, color shall provide a redundant indicator with regard to standard identity. If color is not used, the fill is transparent (see figure 8). In unframed symbols, color shall be the sole indicator of standard identity, excluding text amplifiers. The default colors that shall be used to designate standard identity when colored symbols are either hand drawn or displayed electronically are specified in 5.3. Table I depicts the default colors that shall be used to designate standard identity when colored symbols are either hand-drawn or displayed electronically. The color fill of purple (see 5.3) may be used as a rendering option for civilian units, equipment and installations. The standard identity shall determine the frame shape of the civilian track. The purple color fill option may be used for any or all of the domains and across all standard identities with the exception of suspect and hostile, which shall remain red. Table V depicts representative civilian tracks with purple fills. See 5.5 for additional information on how color is to be displayed in a symbol.

Check the source to verify that this is the current version before use.

5.3.4 Icons. The icon is the innermost part of a symbol which provides an abstract pictorial or alphanumeric representation of units, equipment, installations, activities, or operations. This standard distinguishes between icons that must be framed or unframed and icons where framing is optional. See table VI for examples of framed and unframed icons. Text icons shall be no more than four characters.

TABLE VI. Framed and unframed icons shown in present and planned status.

SYMBOL	FRAMED ICON (PRESENT)	UNFRAMED ICON (PRESENT)	FRAMED ICON (PLANNED)	UNFRAMED ICON (PLANNED)
FRIEND MORTAR				
HOSTILE TANK				

5.3.4.1 Main icons. Main icons are icons that are placed in the main sector of the bounding octagon and do not exceed the dimensions of the main sector (see figure 9).

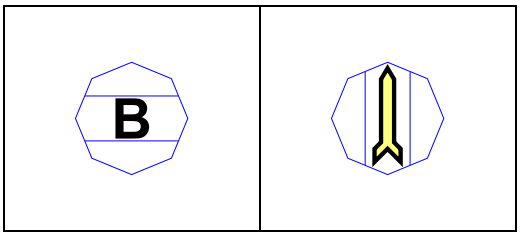

FIGURE 9. Examples of main icons.

5.3.4.2 Full octagon icons. Full octagon icons are icons that do not adhere to the sectors of the bounding octagon and do not exceed the dimensions of the bounding octagon (see figure 10).

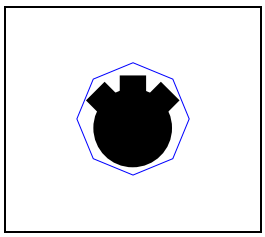

FIGURE 10. Example of full octagon icon.

5.3.4.3 Full frame icons. Full frame icons are icons that exceed the dimensions of the bounding octagon and touch the interior border of the frame (see figure 11).

Check the source to verify that this is the current version before use.

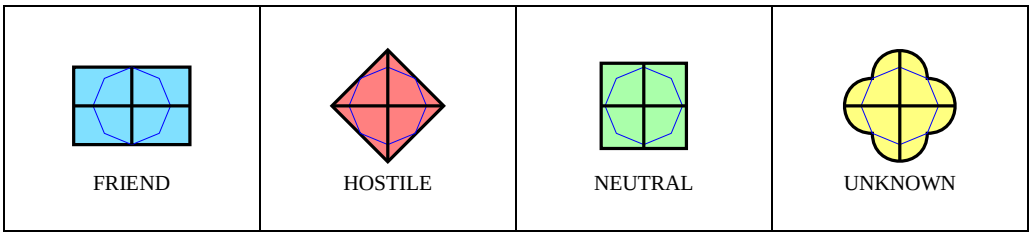

FIGURE 11. Examples of full frame icons (medical unit).

5.3.5 Modifiers. A modifier provides an abstract pictorial or alphanumeric representation that is displayed in conjunction with an icon inside the symbol frame or frame area when the frame is not shown. The modifier provides additional information about the object, such as unit, equipment, installation, or activity being displayed. Text modifiers shall be no more than three characters. A modifier may not be placed in any sector where the main icon extends into that particular sector of the bounding octagon.

5.3.6 Amplifiers. An amplifier provides additional information about the symbol and is displayed outside the frame. The amplifier field descriptions vary by dimension and are detailed within the respective appendices. The default placement of amplifiers around symbols is shown in each of the dimensions. Not all amplifiers are applicable to all symbols. When an amplifier is displayed, it shall be defined in accordance with the appropriate standard identity or control measure symbol. For the purposes of de-cluttering the display, only essential amplifiers should be used. When multiple text amplifiers are displayed in a single field, only the most critical amplifier should be used. Amplifiers on the left shall be right aligned, amplifiers on the right shall be left aligned and top and bottom amplifiers shall be centered. All text shall be presented in upper case sans serif font. Font size and color should be tested to determine display legibility. Amplifier fields should be used, even when not all amplifiers on a particular side of the symbol are displayed, and the order of the amplifier fields shall remain unchanged.

TABLE VII. Modifier and amplifier field definitions and maximum display lengths for tactical symbols .

FIELD	FIELD TITLE	DESCRIPTION	U[1]	E[1/2]	I[1]	SI[1]	A[1]
A	Symbol Icon	The innermost part of a symbol that represents a joint military object (see 5.3.4).	G	G	G	G	G
B	Echelon	A graphic amplifier in a unit symbol that identifies command level (see 5.3.6.1 and table D-III).	G	-	-	-	G
C	Quantity	A text amplifier in an equipment symbol that identifies the number of items present.	-	9[3]	-	-	-
D	Task Force Indicator	A graphic amplifier that identifies a unit or activities symbol as a task force (see 5.3.6.3 and figure 13).	G	-	-	-	G
E	Frame Shape Modifier	A graphic modifier that displays affiliation, battle dimension, or exercise amplifying descriptors of an object (see 5.3.2 and tables I, II and III).	G	G	G	-	G

TABLE VII. Modifier and amplifier field definitions and maximum display lengths for tactical symbols - Continued.

FIELD	FIELD TITLE	DESCRIPTION	U[1]	E[1/2]	I[1]	SI[1]	A[1]
R2	SIGINT Mobility Indicator	M = Mobile, S = Static, or U = Uncertain.	-	-	-	1	-
S	Headquarters Staff Indicator/Offset Location Indicator	**Headquarters staff indicator**: A graphic amplifier for units, equipment and installations that identifies a unit as a headquarters (see table D-III and figure 13). **Offset location indicator**: A graphic amplifier for units, equipment and installations used when placing an object away from its actual location (see 5.3.6.5 and figure 13).	G	G	G	-	G
T	Unique Designation	A text amplifier for units, equipment and installations that uniquely identifies a particular symbol or track number. Identifies acquisitions number when used with SIGINT symbology.	30	30	30	30	30
V	Type	A text amplifier for equipment that indicates types of equipment.	-	24	-	24	-
W[5]	Date/Time Group (DTG)	An alphanumeric designator for displaying a date-time group (DDHHMMSSZMONYYYY) or "O/O" for on order. The date-time group is composed of a group of six numeric digits with a time zone suffix and the standardized three-letter abbreviation for the month followed by four digits representing the year. The first pair of digits represents the day; the second pair, the hour; the third pair, the minutes. For automated systems, two digits may be added before the time zone suffix and after the minutes to designate seconds.	16	16	16	16	16
X	Altitude/Depth	A text amplifier for units, equipment and installations, that displays either altitude, flight level, depth for submerged objects; or height of equipment or structures on the ground. See 5.3.6.6 for content.	14	14	14	-	14
Y[6]	Location	A text amplifier for units, equipment and installations that displays a symbol's location in degrees, minutes and decimal minutes (or in MGRS or other applicable display format).	19	19	19	19	19
Z	Speed	A text amplifier for units and equipment that displays velocity as set forth in MIL-STD-6040.	8	8	8	-	8

TABLE VII. Modifier and amplifier field definitions and maximum display lengths for tactical symbols - Continued.

FIELD	FIELD TITLE	DESCRIPTION	U[1]	E[1/2]	I[1]	SI[1]	A[1]
AA	Special C[2] Headquarters	A text modifier for units; indicator is contained inside the frame; contains the name of the special C2 Headquarters.	9	-	-	-	9
AB	Feint/Dummy Indicator	A graphic amplifier for units, equipment and installations that identifies an offensive or defensive unit intended to draw the enemy's attention away from the area of the main attack (see 5.3.6.4 and figure 13).	G	G	G	-	G
AC	Installation	Installation: A graphic amplifier for units, equipment and installations used to show that a particular symbol denotes an installation (see 5.3.6.2 and figure 13).	G	G	G	-	G
AD	Platform Type	Electronic intelligence notation (ELNOT) or communications intelligence notation (CENOT)	-	-	-	6	-
AE	Equipment Teardown Time	Equipment teardown time in minutes.	-	-	-	3	-
AF	Common Identifier	Example: "Hawk" for Hawk SAM system.	-	-	-	12	-
AG	Auxiliary Equipment Indicator	Towed sonar array indicator: A graphic modifier for equipment that indicates the presence of a towed sonar array (see 5.3.6.10, figure 13 and table IX).	-	G	-	-	-
AH	Area of Uncertainty	A graphic modifier for units, equipment and installations that indicates the area where an object is most likely to be, based on the object's last report and the reporting accuracy of the sensor that detected the object (see 5.3.6.12.1 and table D-III).	G	G	G	-	G
AI	Dead Reckoning Trailer	A graphic amplifier for units and equipment that identifies where an object should be located at present, given its last reported course and speed (see 5.3.6.12.2 and table D-III).	G	G	G	-	G
AJ	Speed Leader	A graphic amplifier for units, equipment and installations that depicts the speed and direction of movement of an object (see 5.3.6.12.3 and table D-III).	G	G	G	-	G
AK	Pairing Line	A graphic amplifier for units, equipment and installations that connects two objects and is updated dynamically as the positions of the objects change (see 5.3.6.12.4 and table D-III).	G	G	G	-	G
AL	Operational Condition	A graphic amplifier for equipment or installations that indicates operational condition or capacity.		G	G		G

TABLE VII. Modifier and amplifier field definitions and maximum display lengths for tactical symbols - Continued.

FIELD	FIELD TITLE	DESCRIPTION	U[1]	E[1/2]	I[1]	SI[1]	A[1]
AO	Engagement Bar	A graphic amplifier placed immediately atop the symbol. May denote, 1) local/remote status; 2) engagement status; and 3) weapon type.	G/8	G/8	G/8	-	-
AP	Target Designator	A six character text modifier used in Fire Support operations to uniquely designate targets in accordance with STANAG 2147, where characters 1 and 2 are alphabetic, and characters 3-6 are numeric: AANNNN.	-	3	-	-	-
AQ	Guarded Unit	During ballistic missile defense, some tracks are designated as guarded by a particular unit	-	2	-	-	-
AR	Special Designator	Special track designators such as Non-Real Time (NRT) and Tactically Significant (SIG) tracks are denoted here.	-	3	-	-	-
AS	Country	Identifies the country of the organization being shown. Use GENC Standard	3	-	-	-	G

Notes: 1. Column headings: U = units, E = equipment, I= installations, SI = signals intelligence (SIGINT) and A = Activities.
2. Equipment includes air, space, sea surface, subsurface and SOF, as well as land-based equipment as shown in table I.
3. Numeric entry indicates text modifier. "G" indicates graphic modifier. A dash (-) inside boxes indicates non-applicable.
4. Field J: See TC 2-33.4.
5. Field W: D = day, H = hour, M = minute, S = second, Z = Greenwich or local time, MON= month and Y = year.
6. To support homeland security and homeland defense, the Federal Geographic Data Committee (FGDC) US National Grid (USNG) standard when referenced to North American Datum 1983 (NAD83) is operationally equivalent to and is an accepted substitute for MGRS coordinates referenced to WGS 84. Note that at mapping scales of 1:5000 and smaller, NAD83 and WGS 84 are considered equivalent.

5.3.6.1 Echelon indicator. The echelon indicator provides a graphic representation of command level and is used to show the element echelon on installations, boundary lines, lines and areas. Echelon indicator codes are listed in table D-III of the land appendix. The indicator is represented in field B as defined in table VII.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

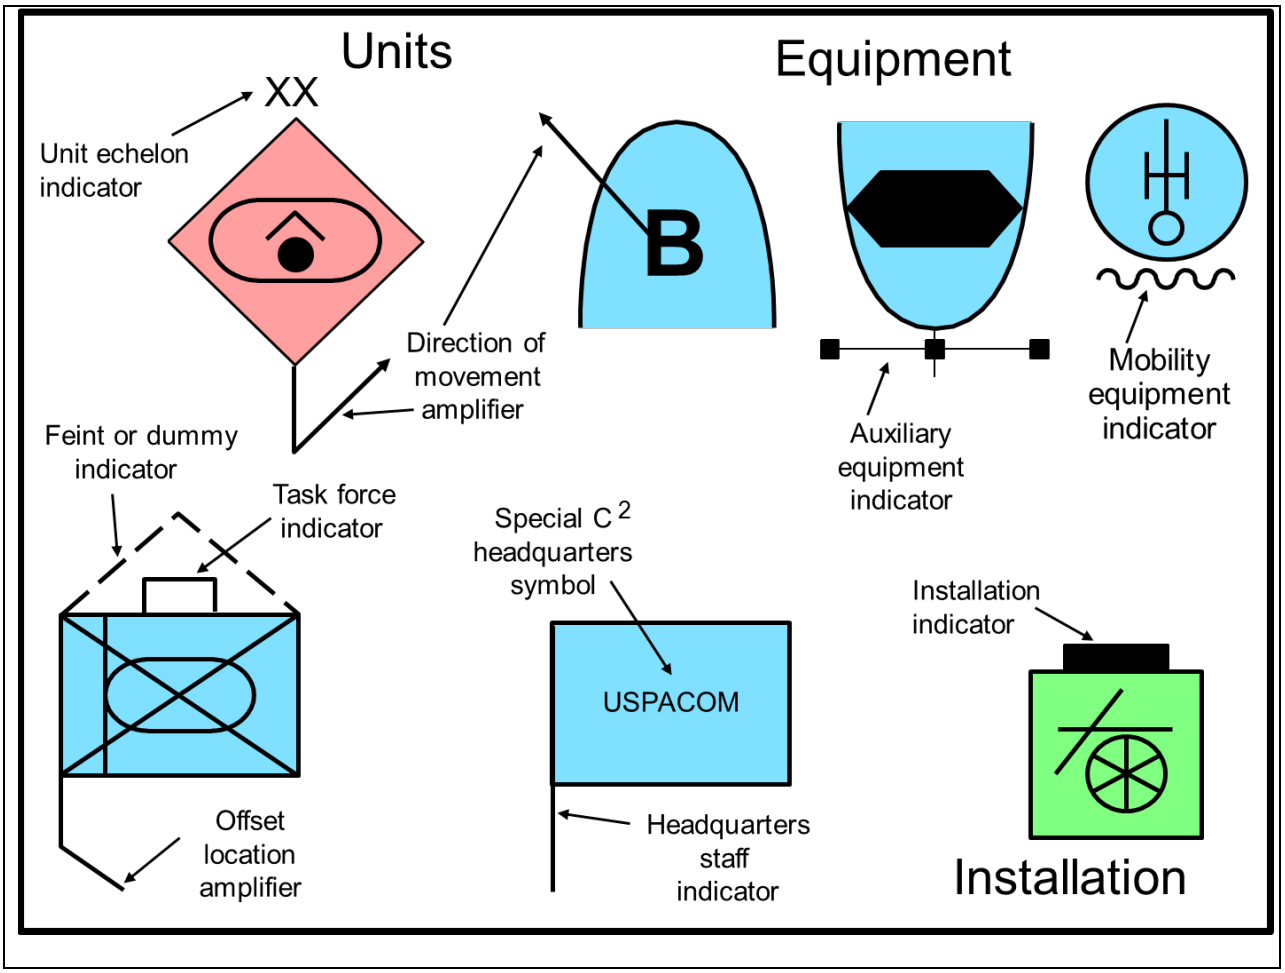

FIGURE 12. Static graphic modifiers for tactical symbols.

5.3.6.2 Installation indicator. The installation indicator is a shaded block used to show that a particular symbol denotes an installation. Although installations are included in the symbol hierarchy, the addition of an installation indicator can turn any tactical symbol (except Signals Intelligence symbology - Appendix J) into an installation. The indicator is represented in field AC as defined in table VII and is positioned as shown in figure 12.

5.3.6.3 Task force indicator. The task force indicator is a bracket that identifies a unit or activities symbol as a task force. The indicator is represented in field D as defined in table VII and is positioned as shown in figure 12.

5.3.6.4 Feint/dummy indicator. The feint or dummy indicator is a dashed inverted “V” that identifies offensive or defensive units, equipment and installations intended to draw the enemy's attention away from the area of the main attack. The indicator is represented in field AB as defined in table VII and is positioned as shown in figure 12.

5.3.6.5 Offset location amplifier. The offset location amplifier is used when placing an object away from its actual location. The amplifier is a line extending downward from the left side of a frame or an appropriate anchor point on an icon. The offset location amplifier differs

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

from the headquarters staff amplifier in that the former has an elbow extending to the actual location. See figure 12. In addition, the actual location is given in latitude and longitude.

5.3.6.6 Altitude/depth modifier. This field may contain alternate value formats. Enter a description of the altitude/depth (X) using one of the following.

5.3.6.6.1 Altitude base reference point. Legal values are “GL” ground level and “MSL” mean sea level.

5.3.6.6.2 Relative altitude. The relative altitude is a composite field consisting of multiple parts: the numeric altitude, the altitude unit of measurement and the altitude vertical dimension. Legal values for the numeric altitude are (minus) -99999 through 99999 in increments of 1. Legal values for altitude units of measure is feet “FT,” meters “M,” kilometers “KM,” and statute miles “SM.” The legal value for the depth unit of measure is feet “FT and meters “M.” Legal values for the vertical dimension are “AGL” above ground level, “AMSL” above mean sea level, “HAE” height above ellipsoid and “BMSL” below mean sea level. BMSL is used only for depth of submerged objects, reported in feet. A space may be added between the values in the field to make it easier to read.

Examples: 1250 FT AGL, 1000 FT AMSL, 1524 M HAE, 35760 FT BMSL.

5.3.6.6.3 Flight level. By definition, flight level (FL) is, “Surfaces of constant atmospheric pressure which are related to a specific pressure datum, 1013.2 mb (29.92 in) and are separated by specific pressure intervals. (Flight levels are expressed in three digits that represent hundreds of feet; e.g., flight level 250 represents a barometric altimeter indication of 25,000 feet and flight level 255 is an indication of 25,500 feet.)” The legal value for flight level indicator is “FL.” A space may be added between the values in the field to make it easier to read. The legal value for context quantity is 000-999, in increments of one.

Example: FL 290.

5.3.6.6.4 Multiple instances of altitude/depth modifiers. When multiple instances of the “X” modifier are present in a single instance of a symbol or graphic (ex., Minimum Altitude “X,” Maximum Altitude “X1”), for display purposes, the fields may be separated by a hyphen “-,” or a space, hyphen and space “ - .”

Examples:
500 FT AGL – 1250 FT AGL

25 FT AMSL –
150 FT AMSL

FL 250 – FL 290

MSL –
35760 FT BMSL

Check the source to verify that this is the current version before use.

5.3.6.7 Date-time group. Date-time group (DTG) is defined as the date and time expressed in an alphanumeric combination. The alphanumeric combination used is day-time-time zone-month-year. The alphanumeric combination can be displayed in a number of ways. In its longest form, sixteen characters, it is composed of eight digits (first pair of digits denotes the date, second pair denotes the hours, third pair denotes the minutes and fourth pair denotes the seconds) followed by the time zone suffix, followed by a three-letter month abbreviation and four digits for the year: DDHHMMSSZMONYYYY. It can also be expressed in shorter forms by removing characters, such as DDHHMMZMONYY. On order (O/O) is a valid substitute for DTG.

5.3.6.8 Direction of movement amplifier. The direction of movement amplifier is an arrow or staff identifying the direction of movement or intended movement of an object. For land symbols, the amplifier is an angled arrow extending downward from the bottom center of the frame or icon and pointing in the direction of movement. For all other symbols, the amplifier is an arrow extending from the center of the frame or icon and pointing in the direction of movement (see figure 12).

5.3.6.9 Mobility indicator. The mobility indicator, which is only used for equipment, depicts the mobility feature of an object, as shown in table VIII. This indicator identifies mobility other than that intrinsic to the equipment itself. For example, the symbol for a self-propelled howitzer moving by train would include a railway mobility indicator, while the symbol for a self-propelled howitzer, a tank or other tracked vehicle would not have a mobility indicator. The indicator is represented in field R as defined in table VII and is positioned as shown in figure 12.

TABLE VIII. Equipment mobility indicators.

DESCRIPTION	MOBILITY SYMBOL	UNFRAMED	UNKNOWN	FRIEND	NEUTRAL	HOSTILE

DESCRIPTION	MOBILITY SYMBOL	UNFRAMED	UNKNOWN	FRIEND	NEUTRAL	HOSTILE
TOWED SONAR ARRAY (SHORT)						
TOWED SONAR ARRAY (LONG))						

5.3.6.11 Text modifiers. Table IV defines the specific content, length and type of each text modifier. Not all text modifiers are applicable to all symbols. However, when any such modifier is displayed, it shall be defined in accordance with the contents of table VII and positioned in accordance with figure 12. Air/space and sea track numbers are included in field T. Staff comments and additional information are contained in fields G and H, with the content of these fields being implementation specific so long as the maximum number of characters in each field is not exceeded. Although text modifiers are normally displayed around the symbol, the special C2 headquarters indicator (field AA as defined in table VII) is contained inside the frame, as seen in figure 2 and figure 12.

5.3.6.12 Dynamic graphic amplifiers. A dynamic amplifier is a line or area graphic whose size and placement are based on the attributes of the object represented by the symbol and can change as these attributes and the scale of the background change. An example of each dynamic graphic amplifier is shown in figure 13. These examples are notional; the size and placement of each amplifier will vary based on the attributes of the object.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

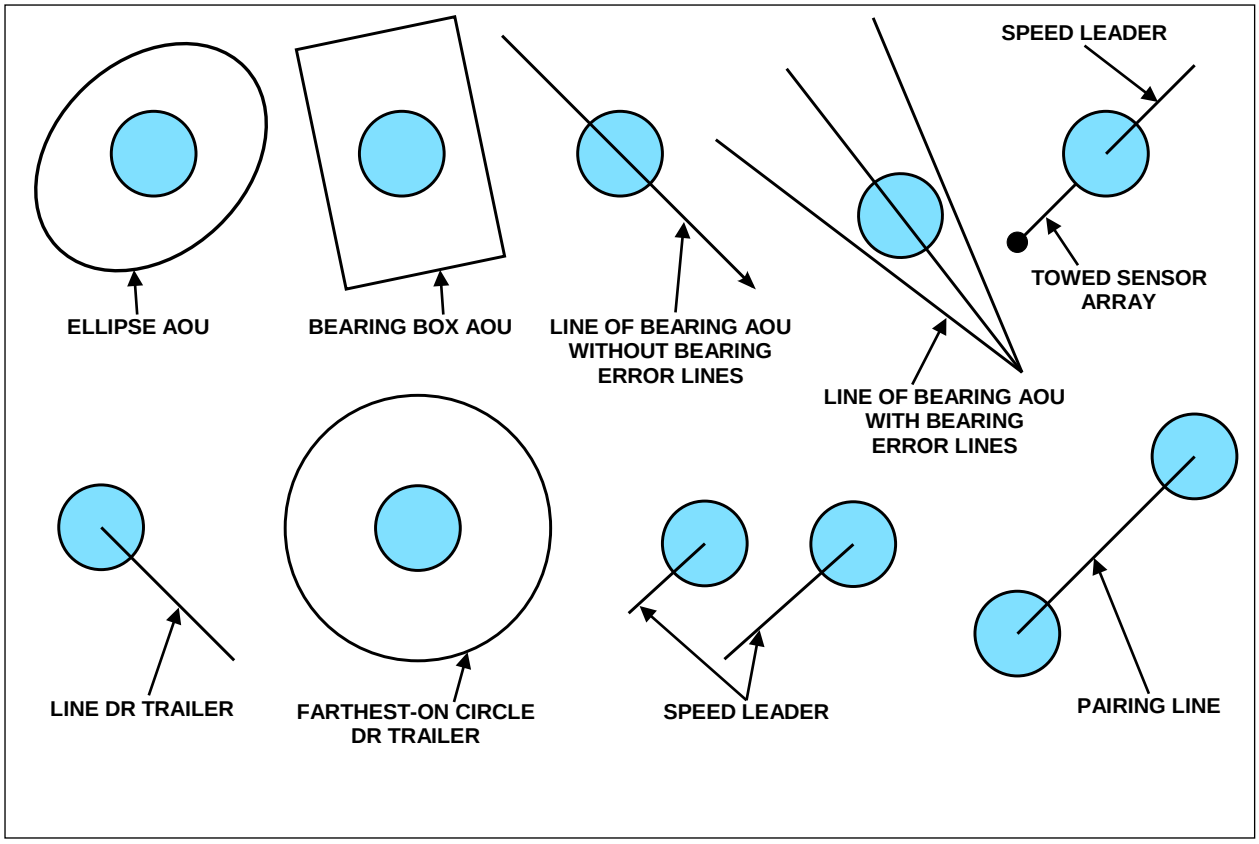

FIGURE 13. Dynamic graphic amplifiers for icon-based symbols.

Dynamic graphic amplifiers may be color-coded based on the attributes of the symbol. In cases such as ballistic missile target status as indicated in the Engagement/Target Bar (field AL), the symbol's track history, projected trajectory (similar to dead reckoning), threat fan and its projected impact ellipse should reflect target status of the ballistic missile. Likewise, if threat is denoted by color via the Operational Condition/Status bar (field AO), symbols associated amplifier graphics should reflect the color status indicated in the operational condition/status field. Figure 14 illustrates an example of dynamic amplifiers being color coded.

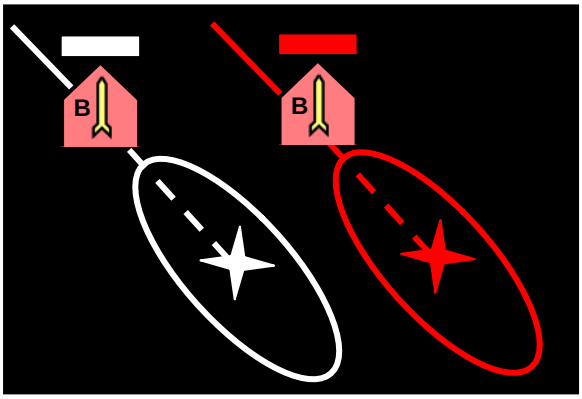

FIGURE 14. Color coded dynamic amplifiers

Check the source to verify that this is the current version before use.

5.3.6.12.1 Area of uncertainty amplifier. The area of uncertainty (AOU) amplifier displays the area where an object is most likely to be located, based on the object's last report and the reporting accuracy of the sensor that detected the object. The AOU amplifier can be displayed as an ellipse, a bearing box, or a line of bearing, depending on the report received for the object.

5.3.6.12.1.1 Ellipse AOU amplifier. The ellipse AOU amplifier is a rotated ellipse whose center is the last reported position for the object. The ellipse is shown as a solid line whose draw parameters are based on the attributes of the sensor that detected the object. The symbol for the object is displayed at the center of the ellipse.

5.3.6.12.1.2 Bearing box AOU amplifier. The bearing box AOU amplifier is a rotated rectangle whose center is the last reported position for the object. The rectangle is shown as a solid line whose draw parameters are based on the attributes of the sensor that detected the object. The symbol for the object is displayed at the center of the box.

5.3.6.12.1.3 Line of bearing AOU amplifier. The line of bearing AOU amplifier is a solid line whose rotation represents the bearing of the object and whose length is determined by its range estimate. The amplifier has a single bearing "center" line and may include bearing error "V" lines. The bearing error determines the placement of the "V" lines and is the angle from the bearing line to one of the bearing error lines. The bearing error lines are dotted and symmetric on either side of the bearing line. The length of the bearing error lines is equal to the bearing length.

5.3.6.12.2 Dead reckoning trailer amplifier. An object can be displayed at its last reported position, or it can be displayed at its dead reckoned position. Dead reckoning (DR) uses the course and speed of an object from the last report and calculates where the object should be at present. The object is then plotted where it should be at the present time, assuming the course and speed are unchanged. The DR trailer amplifier can be displayed as a line or circle, depending on the report received for the object. Because DR calculates where the object should be at present, the status of the symbol for the object is shown as "present," rather than "planned."

5.3.6.12.2.1 Line DR trailer amplifier. The line DR trailer amplifier is a dotted line that extends from the last reported position for the object to its dead reckoned position. The dotted line is a series of uniformly sized and shaped dots, with the symbol for the object displayed at its dead reckoned position.

5.3.6.12.2.2 Farthest-on circle DR trailer amplifier. The farthest-on circle DR trailer amplifier is a dotted circle indicating the furthest an object could be after a given time traveling at its top speed in any direction. The center of the circle is the last reported position for the object, and the radius is the maximum distance the object could travel based on its last reported position and speed; the symbol for the object is displayed at the center of the circle.

5.3.6.12.3 Speed leader amplifier. The speed leader amplifier is a line extending from the center of the frame or icon and pointing in the direction of movement; the length of the line is based on a combination of actual speed and object type. For example, the length of the speed leader for a submarine might be 1/4 inch if its speed is less than 15 knots, 1/2 inch if its speed is between 15 and 30 knots and 3/4 inch if its speed is more than 30 knots, while the length of the

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

speed leader for an aircraft might be 1/4 inch if its speed is less than 300 knots, 1/2 inch if its speed is between 300 and 600 knots and 3/4 inch if its speed is more than 600 knots. The speed leader represents both speed and direction of movement information in a single amplifier; by contrast, the static direction of movement amplifier is a fixed length and identifies only the direction of movement of the object.

5.3.6.12.4 Pairing line amplifier. The pairing line amplifier is a line that connects two objects and is updated dynamically as the positions of the two objects change. For example, a pairing line might connect an active missile to the associated hostile aircraft. A pairing line is drawn from the center of the frame or icon for the first object to the center of the frame or icon for the second object. The color and style (e.g., solid, dotted) of the line can vary based on the specific context in which the amplifier is used.

5.3.6.12.5 Dynamic towed sensor array amplifier. The dynamic towed sensor array amplifier is a line extending from the center of a symbol to the center of towed acoustic array. The length of the line is based upon the distance between the stern of the towing ship and the center of the towed acoustic array. The orientation of the towed sensor array amplifier shall be 180 degrees from the speed leader of the object. A solid circle, representing the center of the acoustic array, shall be at the terminus of the towed sensor array amplifier.

5.3.6.13 Operational condition amplifier. The operational condition amplifier provides a graphic representation of an entity's (equipment or installation) operational condition. Operational condition amplifiers are shown in table VII and defined in the appendix for each symbology set. An alternative color representation is shown in table VIII.

TABLE X. Operational condition amplifiers for icon-based symbols.

DIMENSION / OPER. CONDITION	AIR/SPACE	SURFACE				SUBSURFACE
		LAND			SEA SURFACE	
		UNITS	EQUIPMENT	INSTALLATIONS		
FULLY CAPABLE		N/A				
DAMAGED/RENDERED INEFFECTIVE[1]		N/A				
DESTROYED		N/A				

Notes: 1. The "Rendered Ineffective" operational condition amplifier shall be used when equipment capable of inflicting injury and/or death (IEDs or mines) is known to have been defused or rendered inoperable while under the control of friendly forces. The "Damaged" operational condition amplifier shall be used where "Rendered Ineffective" does not apply.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

TABLE XI. Alternate operational condition amplifiers for icon-based symbols.

DIMENSION / OPER. CONDITION	AIR/SPACE	SURFACE				SUBSURFACE
		LAND			SEA SURFACE	
		UNITS	EQUIPMENT	INSTALLATIONS		
FULLY CAPABLE		N/A				DAMAGED/RENDERED INEFFECTIVE[1]		N/A				DESTROYED		N/A				FULL TO CAPACITY[2]		N/A				
Notes: 1. The “Rendered Ineffective” operational condition amplifier shall be used when equipment capable of inflicting injury and/or death (IEDs or mines) is known to have been defused or rendered inoperable while under the control of friendly forces. The “Damaged” operational condition amplifier shall be used where “Rendered Ineffective” does not apply.

2. Associated with a symbolized object where its capacity can be measured and the status of that capacity is relevant.

5.3.6.14 Engagement amplifier bar. The engagement amplifier bar may be used to designate engagements and/or to indicate targets. Both may be done in conjunction where depicted targets contain engagement information.

5.3.6.14.1 Engagement designation using the engagement amplifier bar. Engagement bars are positioned immediately atop the hostile target and its assigned friendly track. Example depictions of engagement bars are illustrated in figure 15 and figure 16.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

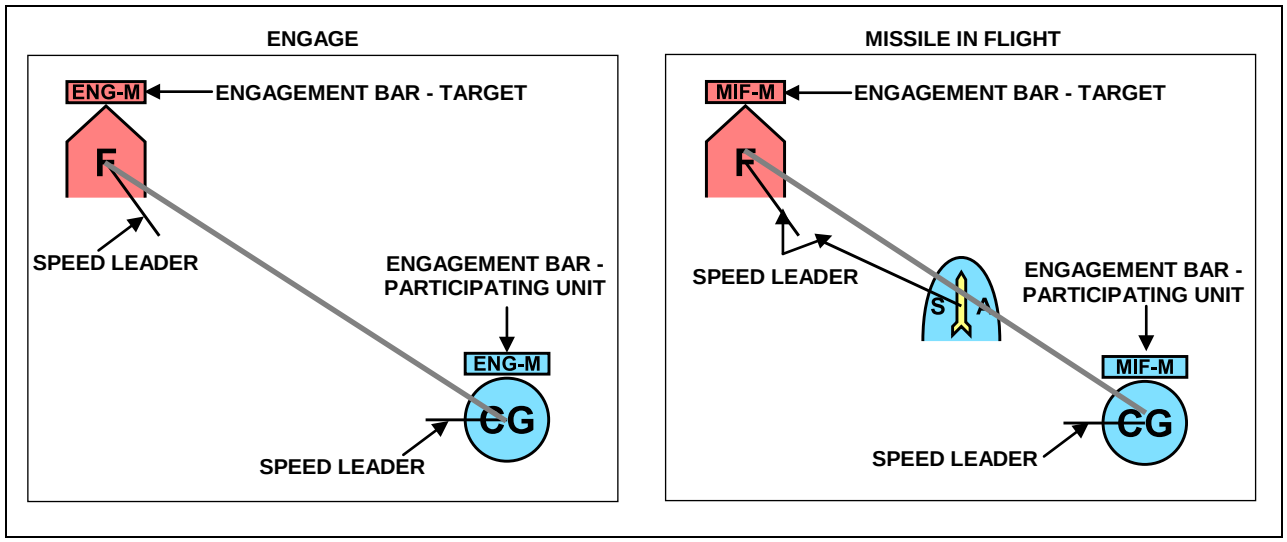

FIGURE 15. Example local engagement scenarios: engage (left), missile in flight (right).

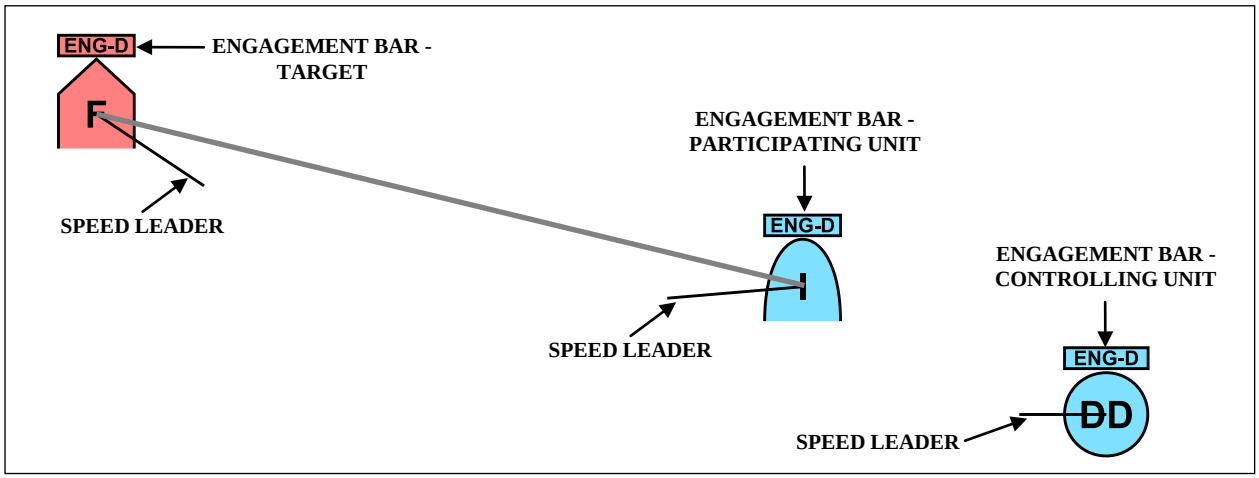

FIGURE 16. Example engagement scenario: participating units.

The engagement bar may contain information on 1) remote/local engagement; 2) stage of the engagement (i.e., assign/cover, engage, hold fire, cease fire, cease engage, break engagement, missile in flight); and 3) type of weapon assignment (i.e., missile, gun, torpedo). The color of the engagement bar should be identical to its symbol's standard identity. Therefore, engagement bars for a hostile target and a friendly participating unit would have red and blue engagement bars, respectively (see figure 17 and figure 18). The colors of the engagement bars should have the same RGB value as its respective symbol. All engagement bars should have a black or white frame based on providing optimal contrast between the colored amplifier bar and the map background.

5.3.6.14.2 Target designation using the engagement amplifier bar. If the engagement amplifier bar is used to designate targets, non-targets or expired targets, a different coloring schema shall be used. Hostile tracks which are deemed targets shall have a red bar (RGB: 255, 0, 0) to indicate target. For hostile tracks deemed to be non-targets, white

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

(RGB: 255, 255, 255) should be used to indicate non-target. Finally for hostile tracks which have expired shall be colored orange (RGB: 255, 120, 0). Figure 17 depicts the three target denotations.

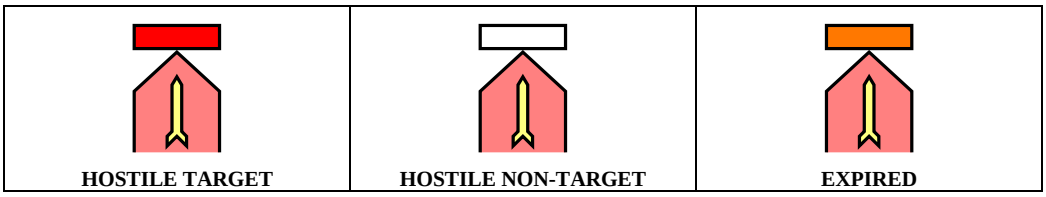

FIGURE 17. Engagement amplifier bar colors for target designation.

5.3.6.14.2.1 For hostile targets. If engagement text is incorporated, either white (RGB: 255, 255, 255) or black (RGB: 0, 0, 0) may be used to denote engagement status. Otherwise, for non-targets and expired tracks, engagement status within the engagement amplifier bars shall remain black (see figure 18).

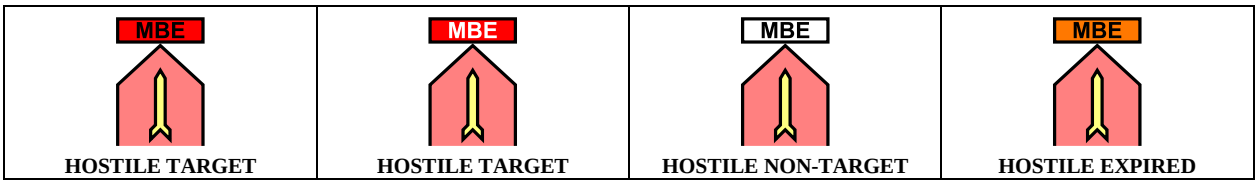

FIGURE 18. Engagement amplifier bar text colors for target designation.

5.3.6.14.3 Engagement amplifier bar structure. The engagement amplifier shall be arranged as follows: A:BBB-CC, where A (1 character) denotes a local versus remote engagement, BBB (up to 3 characters) denotes engagement state and CC (up to 2 characters) denotes weapon deployment/asset control.

5.3.6.14.3.1 Remote and local engagements. Remote and local engagements may be identified in the engagement amplifier (part A of A:BBB-CC). A remote engagement is defined as an engagement assigned outside of ownship control. A local engagement is defined as an engagement assigned to ownship. Local engagements shall have no letter assignment in the A:BBB-CC engagement bar; whereas, remote engagements shall be denoted as “R” in the engagement bar. In the case of multiple engagements, there may be a mixture of both local and remote engagements. In such cases, “B” shall be denoted to indicate both local and remote engagements and shall be used in conjunction with the multiple engagements amplifier (MLT).

5.3.6.14.3.2 Engagement stage. Engagement stage may be identified by up to a three-character code (part BBB of A:BBB-CC). Typical engagement stages to depict include assign/cover, engage and missile(s) in flight. Other engagement events such as hold fire, cease fire, cease engage, break engagement, terminate engagement, management by exception, management by exception less than threshold and others may be depicted in the engagement amplifier. In the case of multiple engagements where no one specific engagement is highlighted, “MLT” may be used to indicate multiple engagements. In conjunction with the MLT designation, the number of engagements shall be listed in the subsequent CC field (see 5.3.6.14.3.3). Table XII depicts engagement stage codes.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

TABLE XII. Engagement[1] stage codes.

ENGAGEMENT STAGE	CODE
ASSIGN/COVER	ASN
ENGAGE	ENG
MISSILE IN FLIGHT	MIF
CEASE FIRE	CF
CEASE ENGAGE	CE
HOLD FIRE	HF
TERMINATE ENGAGEMENT	TE
BREAK ENGAGEMENT	BE
MANAGEMENT BY EXCEPTION (MBE)	MBE
MBE LESS THAN THRESHOLD	M<T
MULTIPLE ENGAGEMENTS[2]	MLT

Notes: 1. The term "Engagement" as used in paragraph 5.1.6.14.3.2 denotes both air-to-air and air-to-ground/air-to-surface activities.
2. Number of engagements shall be represented in CC field (see 5.1.6.14.3.3).

5.3.6.14.3.3 Weapons assignment or deployment. Weapons assignment or deployment may also be presented in the engagement amplifier (part CC of A:BBB-CC). Either deployed weapons such as missiles, guns and torpedoes or controlled assets such as unmanned systems, interceptor aircraft and attack aircraft may have representation in the engagement bar. In the case where multiple engagements are represented within a single engagement amplifier bar, the number of engagements starting from "02" shall be used in the CC field. Table XIII depicts weapon and asset codes.

TABLE XIII. Weapon and asset codes.

WEAPON/ASSET	CODE
MISSILE	M
BALLISTIC MISSILE	BM
CRUISE MISSILE	CM
GUN	GN
TORPEDO	T
ATTACK AIRCRAFT	A
COMBAT AIR PATROL (DEFENSIVE COUNTER AIR)	C
DEFENSIVE COUNTER AIR (COMBAT AIR PATROL)	D
UNDERSEA WARFARE (USW)/ANTISUBMARINE WARFARE (ASW)ENGAGEMENT	UW
MINE WARFARE (MIW) ENGAGEMENT	MW
SURFACE WARFARE (SUW) ENGAGEMENT	SW

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

TABLE XIII. Weapon and asset codes - Continued.

WEAPON/ASSET	CODE
ELECTRONIC ATTACK	EA
ELECTRONIC DEFENSE	ED
UNMANNED VEHICLE	UV
CLOSE-IN WEAPON SYSTEM	CW
LAMPS	L3
VERTICAL LAUNCH ASROC[1]	VA
NUMBER OF ENGAGEMENTS[2]	## (02-99)

Notes: 1. Some non-US ships still use non-vertical launch ASROC
2. Shall only be used in conjunction with multiple engagements. Valid numbers are 02-99.

5.3.7 Manually-generated tracks. Manually-generated tracks are those symbols which have not been received through messaging systems, such as Link 16, but rather have been created locally for display. Manually-generated (or manual) tracks are denoted by the “MAN” icon placed within the symbol. Manual tracks can be created across all standard identities and dimensions by adding the “MAN” icon to the center of the frame. In addition, manual tracks can be created for tracks with a known standard identity but unknown dimension by adding the “MAN” icon under the “?” icon. See figure 19 for examples of manual tracks. Manual tracks are only local symbols and not transmitted.

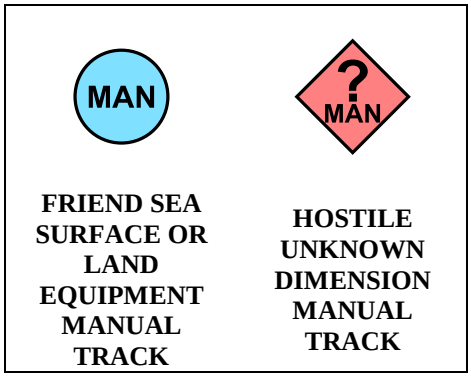

FIGURE 19. Manually-generated tracks.

5.3.8 Composition of icon-based symbols. The purpose of icon, modifier and amplifier placement is to standardize the location of information that graphically describes a unit, equipment, or installation and provides additional information on capability, status and location. Figure 20 shows the composition and placement of a frame, fill, icon, modifiers and amplifiers to form a hostile land unit symbol. The placement of icons, modifiers and amplifiers is the same regardless of frame shape or standard identity.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

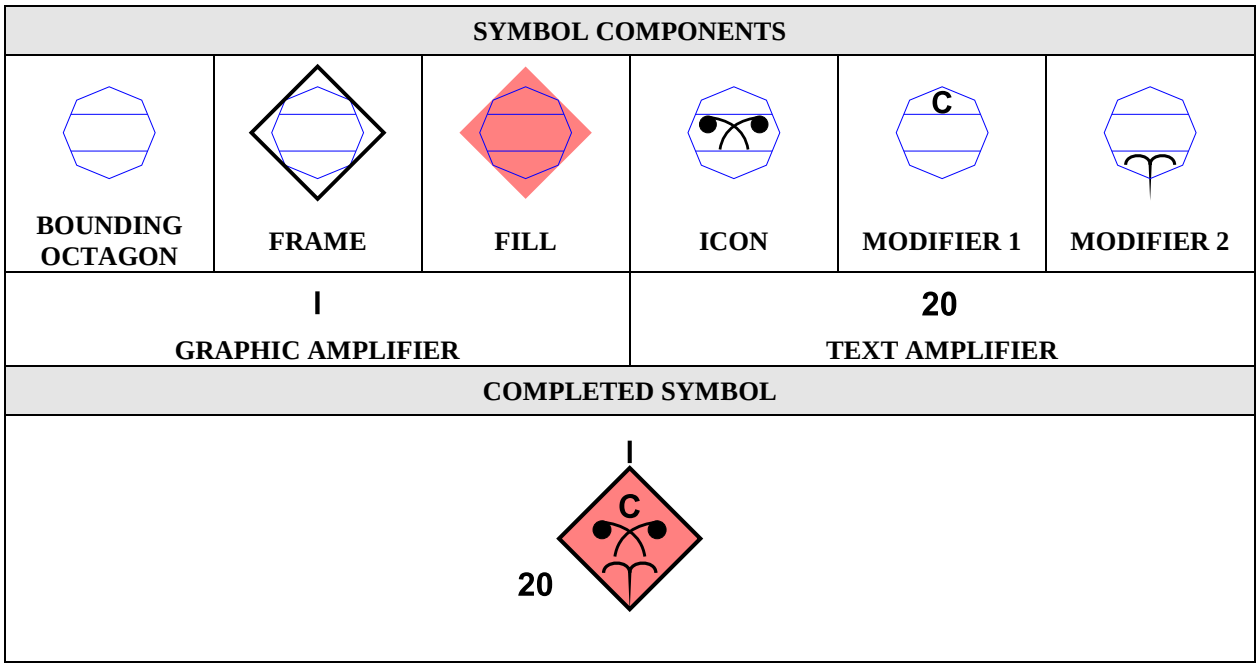

FIGURE 20. Composition of an icon-based symbol.

5.3.8.1 Symbol display hierarchy. C2 systems differ in their operational requirements concerning the amount of information about an object to be displayed. As a result, this document standardizes those symbology elements required to achieve interoperability in information presentation and allows flexibility in the symbol components that are displayed to the warfighter. Display options range from complex, such as a symbol displaying a frame, fill, icon and modifiers, to primitive, such as a symbol rendered as a dot that denotes the presence of an object at a specific location. Table XIV provides examples of display options that can be used in color and monochrome displays and can be either hand-drawn or computer generated. The examples in the table depict some of the display options for the two symbols. Based on operational requirements, systems may be implemented with a fixed set of display options or with the ability to allow warfighters to select one or more display options. If the amplifying information provided by internal icons and modifiers is not required by the warfighter, the symbols may be displayed with frame or frame and fill only, omitting the icons and modifiers. Any display options in table XIV are compliant with this standard. If a system is implemented with multiple display options, the warfighter may be allowed to select a single option for rendering all symbols or to select different options based on the standard identity or battle dimension of the object and the amount of information required. For example, the warfighter may choose to display minimal information about friendly objects (displaying these symbols as dots) and maximal information about potential threats (displaying these symbols with frame, fill, icon and modifiers).

Check the source to verify that this is the current version before use.

TABLE XIV. Symbol display options.

EXAMPLES		DISPLAY OPTION DESCRIPTIONS
CARRIER	FERRY	
		Frame: ON (black or white depending on background) Fill: ON (use default color indicating standard identity) Icon: ON (black or white) Modifiers: ON (civilian sea surface symbols do not permit modifiers) Note: The first column example is a MILITARY COMBATANT, CARRIER with modifiers for HELICOPTER EQUIPPED and NUCLEAR POWERED. The second column example is a CIVILIAN, MERCHANT SHIP and FERRY.
		Frame: ON (black or white depending on background) Fill: OFF Icon: ON (black or white) Modifiers: ON
		Frame: ON (use default color indicating standard identity) Fill: OFF Icon: ON (use default color indicating standard identity) Modifiers: ON
N/A		Frame: OFF Fill: ON Icon: ON (use default color indicating standard identity) Modifiers: N/A (civilian sea surface symbols do not permit modifiers) Note: Only land equipment and civilian sea surface symbols can be displayed without a frame. For civilian white-filled icons, the white-fill should be changed to the color indicating its standard identity.
		Frame: ON (black or white depending on background) Fill: ON (use default color indicating standard identity) Icon: OFF Modifiers: OFF Note: The examples show the dimension level display of CARRIER and FERRY. The CARRIER and FERRY icons, including their parent icons, are not displayed.
		Frame: ON Fill: ON Icon: ON Modifiers: OFF Note: The examples show the entity level display of CARRIER (MILITARY COMBATANT) and FERRY (CIVILIAN).
		Frame: ON Fill: ON Icon: ON Modifiers: OFF Note: The examples show the entity type level display of CARRIER and FERRY (MERCHANT SHIP).
		Frame: OFF Fill: ON (use default color indicating standard identity) Icon: OFF Modifiers: OFF
		Frame: OFF Fill: OFF Icon: OFF Modifiers: OFF Note: Use only to indicate the location of a symbol.

Note: This table shows frame and fill color when displayed on a color monitor.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

5.3.9 Symbol size. The relative size of each symbol and symbol component shall be consistent within a given implementation (see “Alphanumeric character and symbol sizes of MIL-STD-1472 for guidance”). Each of these sizes shall be related to length L as described in 5.1.1. The minimum diameter of a symbol displayed as a dot should be 0.15L.

5.3.10 Line width. Because the symbol frame indicates both the standard identity and dimension of an object, it is critical that line width is sufficient to ensure frame legibility and discriminability at normal viewing distance (see “Symbol line width of MIL-STD-1472 for guidance”). The optimum line width may differ depending on frame size and be affected by whether the frame is filled or unfilled and displayed in color or black/white. Usability testing should be performed to identify the optimum rendering for a given implementation.

5.3.11 Plotting. The plotting of tactical symbols and most point graphics shall be based on the geometric center of the symbol or graphic. The geometric center indicates the general vicinity of the center of mass of an object. Point graphics that do not use their geometric center for plotting shall be positioned based on their anchor point. If an offset location indicator is displayed with a symbol or graphic, the endpoint of the indicator shall show the object's location. If a group of tactical symbols is displayed at one location, the group may be enclosed with a bracket and the location of that group identified with an offset location indicator. An offset indicator is one option for reducing clutter when symbols overlap or are collocated. Other options for reducing visual clutter include (1) repositioning or turning off labels so that they are not obscured by other objects, with a line connecting each label to its object and/or (2) supporting variable coding of objects (e.g., high-interest objects are rendered as symbols and low-interest objects as dots). The choice of display options for addressing clutter is considered to be user specific. The positional accuracy of symbology plotting is also considered user specific.

5.3.12 Orientation. The frame and icon in framed tactical symbols shall be displayed in the orientation shown in the appendices. Equipment in the land battle dimension can be rotated to face the direction of movement only when the symbol is unframed. Control measure symbols shall be displayed in the orientation shown in appendix H. Point graphics that are positioned based on their anchor point can be rotated 90 degrees when necessary to minimize interference with other symbology or terrain features.

5.4 Compliance criteria. If common joint military symbology is implemented to visually display or present symbology, the implementation shall comply with the provisions of this standard. To be considered MIL-STD-2525 compliant, implementations must satisfy criteria related to the appearance of tactical symbols and graphics, the assembling and parsing of SIDC and the interpretation and generation of symbol representations. Each category of compliance criteria is described below:

5.4.1 Appearance of tactical symbols. The following compliance criteria apply to the appearance of tactical symbols:

5.4.1.1 The frame shape in a tactical symbol indicates the standard identity, battle dimension and status as defined in this MIL-STD.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

5.4.1.2 If color is used in a tactical symbol, it indicates the standard identity as defined in this MIL-STD.

5.4.1.3 The icon in a tactical symbol is displayed as framed or unframed in accordance with framing requirements defined in this MIL-STD.

5.4.1.4 The icons in this MIL-STD are used to provide role or mission information whenever the objects for which icons are provided are displayed in a tactical symbol.

5.4.1.5 If text and/or graphic modifiers are included in a tactical symbol, they conform to the field definitions and display lengths defined in this MIL-STD.

5.4.1.6 Tactical symbol components and modifiers are sized and positioned as defined in this MIL-STD.

5.4.1.7 The rendering of tactical symbols and modifiers conform to the display options defined in table XIV.

5.4.1.8 Any temporary features added to a tactical symbol conform to the display rules in this MIL-STD.

5.4.2 Appearance of tactical graphics. The following compliance criteria apply to the appearance of control measure symbols:

5.4.2.1 The icons in this MIL-STD are used to provide information for battlefield planning and managing whenever the objects for which icons are provided are displayed in a control measure symbol.

5.4.2.2 The standard identity and status of a control measure symbol are displayed using color and/or text as defined in this MIL-STD.

5.4.2.3 If text and/or graphic modifiers are included in a control measure symbol, they conform to the field definitions and display lengths defined in this MIL-STD.

5.4.2.4 Control measure symbol components and modifiers are sized and positioned as defined in this MIL-STD.

5.4.3 Assembling and parsing of SIDC. The following compliance criteria apply to the assembling and parsing of SIDC:

5.4.3.1 An implementation can assemble the correct tactical symbol or graphic and its modifier(s) from a SIDC.

5.4.3.2 An implementation can generate the SIDC that will produce the correct tactical symbol or graphic when transmitted to another MIL-STD-2525 compliant system.

5.5 Color. It is important that implementations maximize the contrast between symbology and the display background in order to provide optimum discriminability.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

a. Implementers should include sufficient usability testing to ensure effective operator performance when selecting colors to render the symbology. Color luminance (or brightness) may need to vary depending on the display option(s) selected for symbols. For example, different shades of red may be needed for both filled and unfilled symbols to heighten its contrast upon its map background or display.

b. For filled symbols, this contrast can be provided by using black (RGB: 0, 0, 0) for the frame, icon, modifiers and amplifiers when filled symbols are displayed on a light background and using white (RGB: 255, 255, 255) for these elements when filled symbols are displayed on a dark background. Implementers should select specific values (e.g., in CIE, RGB, or UV terms) for the default symbol colors based on considerations such as operational requirements, hardware configuration, display background and viewing conditions (e.g., ambient lighting). Table XV lists a range of acceptable symbol colors that have been empirically validated across a variety of viewing backgrounds. Table XV lists the symbol colors in terms of RGB and their corresponding hue, saturation and luminance (HSL) values. Three sample color sets are displayed in table XV. The colors for each standard identity shall vary only in terms of their luminance values (luminance terms are **in bold** in table XV). Implementers may use any of the example color sets or may choose an alternative set whose luminance values fall within the range of the light and dark color sets. Color fill ranges for the optional civilian fill have also been included. Standard identity symbol colors shall always maintain their respective hue (e.g., hostile – red, friend – blue, neutral – green, unknown – yellow). No permutations to the color fills shall be permitted, with the lone exception of having the option of using purple to denote civilian tracks. Filled symbols may be depicted as translucent. In such cases, opacity should be set at 35% (65% transparency).

c. For unfilled symbols, implementers should use the default symbol colors in table XVI unless considerations such as operational requirements, hardware configuration, display background and viewing conditions (e.g., ambient lighting) necessitate an alternate symbol color set. In the case of an alternative symbol color set, implementers should select specific values (e.g., in CIE, RGB, or UV terms) for unfilled symbols based on sufficient usability testing.

d. For control measures, this contrast can be provided by using black (RGB: 0, 0, 0) for the graphic when it is displayed on a light background and using white (RGB: 255, 255, 255) when it is displayed on a dark background. If color is used in a graphic, implementers should select specific values for the default colors in table XVI based on the same considerations as for icon-based symbols.

6 NOTES

(This section contains information of a general or explanatory nature that may be helpful, but is not mandatory.)

6.1 Intended use. MIL-STD-2525 is designed to enhance DOD's joint interoperability by providing sets of C2 symbols, a coding scheme for symbol automation and information transfer and technical details to support symbology for C2 systems.

6.3 International standardization agreement implementation. This standard implements NATO STANAG 2019/APP-6, NATO Joint Military Symbology. When changes to, revision, or cancellation of this standard are proposed, the preparing activity must coordinate the action with the US National Point of Contact for the international standardization agreement as identified in the ASSIST database at https://assist.daps.dla.mil/.

6.4 Changes from previous issue. Marginal notations are not used in this revision to identify changes with respect to the previous issue due to the extent of the changes.

APPENDIX A - SYMBOL IDENTIFICATION CODES

A.1 SCOPE.

A.1.1 Scope. This appendix outlines the procedures for developing symbol identification codes (SIDC) for symbols in MIL–STD–2525D. The use of these codes is optional but highly recommended.

A.2 APPLICABLE DOCUMENTS

Specific documents in 2.2 of this standard apply to this appendix.

A.3 DEFINITIONS

The definitions in section 3 of this standard apply to this appendix.

A.4 GENERAL REQUIREMENTS

A.4.1 Organization. This appendix contains SIDC and their elements.

A.5 DETAILED REQUIREMENTS

A.5.1 Symbol identification codes. A symbol identification code is a numeric code that uniquely identifies the elements needed to build a MIL–STD–2525D compliant symbol. The numeric codes provide the same type of descriptions used in message formats but further focus the data to a specific domain for ease in creating the symbols with less band width.

A.5.2 Elements of the symbol identification codes**.** The symbol identification code is composed of eleven elements of information which are presented in two sets of ten digits. An additional set of ten digits composed of three elements must be used when a symbology originator version extension flag is used. This extension is conditional. See figure A–1.

A.5.2.1 Set A - First ten digits.

Version
Standard identity
Symbol set
Status
HQ/Task Force/Dummy
Amplifier

A.5.2.2 Set B - Second ten digits.

A.5.3 Set A. The first set of ten digits:

Digits 1 and 2 is the Version.
Digits 3 and 4 is the Standard Identity.
Digits 5 and 6 is the Symbol Set.
Digit 7 is the Status.
Digit 8 is the Headquarters/Task Force/Dummy.
Digits 9 and 10 is the Amplifier/Descriptor.

A.5.3.1 Version. The version is comprised of two digits and identifies a version change for the SIDC which occurs when there is a change in an established icon, modifier, or drawing rule for a control measure symbol. Subsequent changes will create further version changes for the SIDC.

TABLE A-I. Version.

Description	Code	
No changes to joint military symbology	10	
Any subsequent changes to joint military symbology	11–39	

A.5.3.2 Standard identity. Standard identity is comprised of two digits. The first digit represents the context of the symbol and the second digit reflects the standard identity. The following are the entries for standard identity:

TABLE A-XLV. Cyberspace entity/entity type/entity subtype - Continued.

Entity (Digits 1and 2)	Entity Type (Digits 3 and 4)	Entity Subtype (Digits 5 and 6)	Code Note: The actual code is shown in bold numbers. The remaining numbers are used to show placement within the six digits.
	Government		15**02**00
	Contractor		15**03**00
	Supervisory Control and Data Acquisition (SCADA)		15**04**00
	Non-Government		15**05**00
Effect			**16**0000
	Infection		16**01**00
	Degradation		16**02**00
	Data Spoofing		16**03**00
	Data Manipulation		16**04**00
	Exfiltration		16**05**00
	Power Outage		16**06**00
	Network Outage		16**07**00
	Service Outage		16**08**00
	Device Outage		16**09**00

A.5.5 Third Ten Digits**.** The conditional set C of the SIDC is to accommodate national modifications/additions that are not included in MIL-STD-2525. In particular, when a nation (or approved entity) has a need to transfer symbol information to another allied country/system, then set C provides an approved method to achieve this capability. Set C starts with a three digit number pre-assigned to nations (refer to APP-6 Annex A) which indicates to a recipient the source of the complete 30-digit SIDCs. The fourth digit (if required) is to be used by nations to identify a particular symbol set. The remaining six digits are available for whatever use the source nation decides. To correctly interpret a complete 30-digit SIDC requires the source nation using Set C to provide amplifying documentation to recipients. **Set C should not be used to reinterpret an approved MIL-STD-2525 symbol.**

APPENDIX B - SPACE SYMBOLS

B.1 SCOPE

B.1.1 Scope. This appendix addresses symbols that support space equipment and weapons in the C2 domain. The tables in this appendix present the icons and modifiers for the space domain. This appendix is divided into two sections (see figure B-1): 1) equipment and platform symbols (see section B.6) and 2) missile symbols (see section B.7). This appendix is a mandatory part of the standard. The information contained herein is intended for compliance.

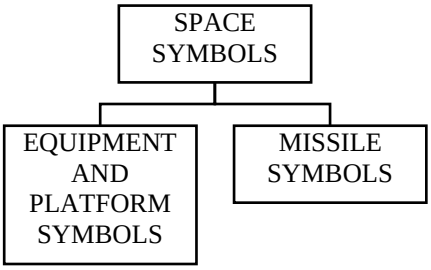

FIGURE B-1. Space appendix sections.

B.2 APPLICABLE DOCUMENTS

Specific documents in 2.2 of this standard apply to this appendix.

B.3 DEFINITIONS

The definitions in section 3 of this standard apply to this appendix.

B.4 GENERAL REQUIREMENTS

B.4.1 Organization. This appendix contains technical specifications, a symbol coding scheme, a symbology hierarchy and space symbology.

B.5 DETAILED REQUIREMENTS

B.5.1 Technical specifications. Composition, construction and display of symbols are explained in the detailed requirements section of the standard.

B.5.2 Symbol identification coding scheme. A symbol identification code (SIDC) is a numeric string that may be used to provide the unique identifier necessary to display or exchange symbol information between MIL-STD-2525 compliant systems. Refer to Appendix A for SIDC positions and descriptions.

B.5.3 Composition of space symbols. A standard method for constructing symbols is presented. Refer to 5.3.8 for an explanation of symbol composition. Figure B-2 shows an example of a space equipment symbol.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

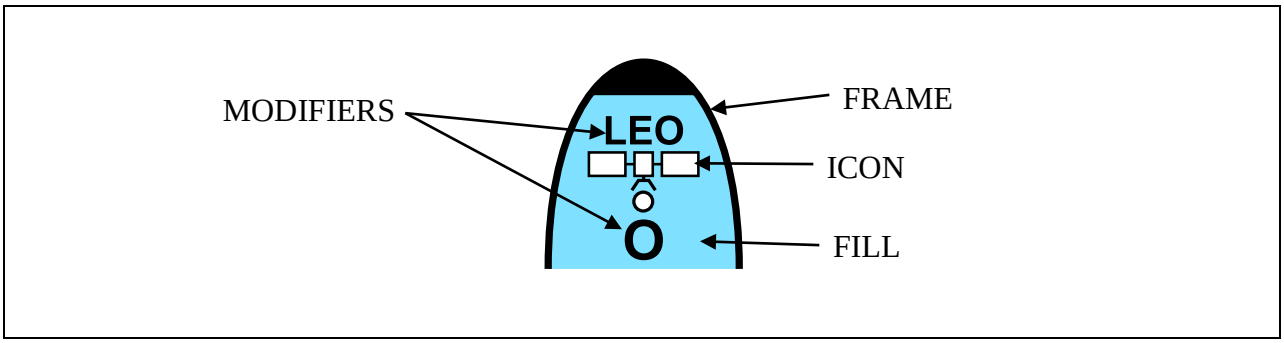

FIGURE B-2. Space symbol components.

B.5.3.1 Symbol building process. Table B-I depicts the symbol building process for space symbols. The process is identical for icons and modifiers requiring the vertical bounding octagon.

TABLE B-I. Space symbol building process.

STEP	DESCRIPTION	EXAMPLE
1.	Choose the frame that matches the standard identity of the object from the space column in tables I, II, or III. In this example, the standard identity is friend. The example depicts a “friendly space track.”	2.	Choose an icon for the main sector of the bounding octagon. In this example, the icon is “civilian earth observation satellite,” a space entity subtype. The example depicts a “friendly civilian earth observation satellite.”	3.	If required, choose a modifier to depict an additional characteristic of the icon. In this example, the modifier is “low earth orbit,” a sector 1 modifier. The example depicts a “friendly civilian earth observation satellite on a low earth orbit.”	
Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

TABLE B-I. Space symbol building process - Continued.

STEP	DESCRIPTION	EXAMPLE
4.	If required, choose a modifier to depict another characteristic of the icon. In this example, the modifier is "optical," a sector 2 modifier. The example depicts a "friendly civilian earth observation satellite on a low earth orbit with optical sensor."	5.	The finished symbol will appear as shown in the example.	
B.5.3.2 Icons and modifiers. All icons shall be placed within the main sector of the bounding octagon (see table B-I). When depicted, modifiers shall be placed in sectors 1 or 2 as appropriate (see table B-I). Only one modifier may be placed in each sector at a given time. Multiple modifiers in the same position are prohibited due to legibility concerns.

B.5.3.3 Amplifiers.

B.5.3.3.1 Text amplifiers. The purpose of the static text amplifiers described in this appendix is to standardize the display of additional alphanumerical information on identity, movement and location and capabilities. See 5.1.6 for more information on amplifiers. Figure B-3 shows the placement of space symbol amplifiers around the friend symbol frame. Table B-II provides descriptions and formats of each amplifier.

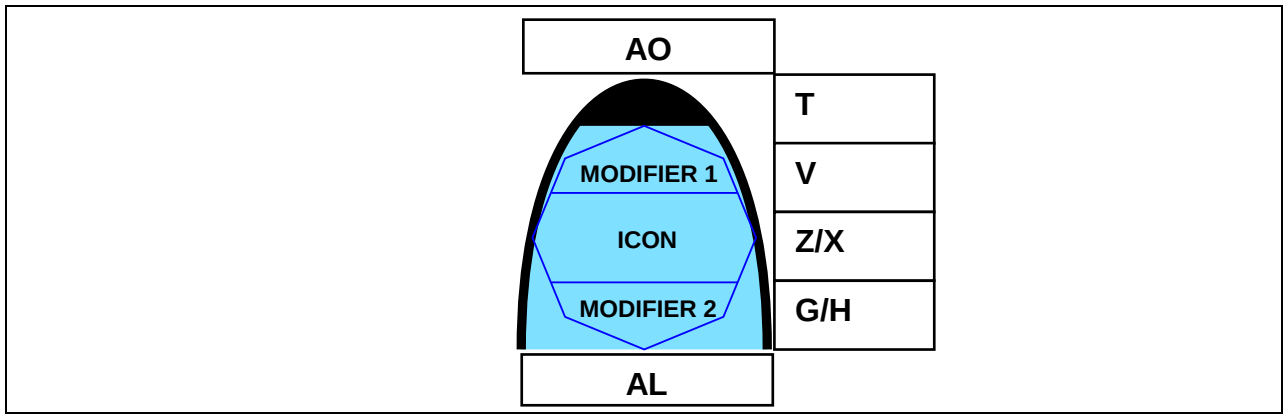

FIGURE B-3. Placement of space symbol amplifiers.

Check the source to verify that this is the current version before use.

TABLE B-II. Descriptions and formats of space symbol amplifiers.

FIELD	FIELD TITLE	DESCRIPTION	FORMAT
A	Space Vehicle Icon	Uses icon and sector modifiers	
G	Staff Comments	A text amplifier for units, equipment and installations; content is implementation specific.	
H	Additional Information	A text amplifier for units, equipment and installations; content is implementation specific.	
T	Unique Designation (Track Number)	A text amplifier for units, equipment and installations that uniquely identifies a particular symbol or track number.	Prefix = TN:##### Example: TN:13579
V	Type	A text amplifier for equipment that indicates types of equipment.	
X	Altitude	A text amplifier for units that displays altitude flight level. See 5.3.6.5 for content.	Measurement units shall be displayed within the string Examples: 1500MSL FL150
Z	Speed	A text amplifier for units and equipment that displays velocity as set forth in MIL-STD-6040.	
AL	Operational Condition	A graphic amplifier for equipment or installations that indicates operational condition or capacity.	Operational Condition amplifier, if used, shall be comprised of only one color. Ex. Satellite: Red - damaged, Green – fully capable Ex: Missile: Red – imminent threat, Green – no threat
AO	Engagement Bar	A graphic amplifier placed immediately atop the symbol. May denote, 1) local/remote status; 2) engagement status; and 3) weapon type.	A:BBB-CC, where A = remote/local BBB = engagement status CC = weapon asset

B.5.3.3.2 Graphic amplifiers. Graphic amplifiers can be static, located in a fixed position in relation to a track's symbol, or dynamic and move about the symbol based on the track's characteristics. See 5.1.6 for more information on amplifiers, including examples of dynamic amplifiers.

B.6 SPACE EQUIPMENT AND PLATFORM SYMBOLS

B.6.1 Space equipment and platform symbols. This section includes the lists of icons and modifiers for building space equipment and platform symbols.

B.6.2 Space equipment and platform icons. Table B-III depicts space equipment and platform icons. Military symbols are depicted with black-filled icons, whereas civilian symbols are depicted with white-filled icons.

APPENDIX C - AIR SYMBOLS

C.1 SCOPE

C.1.1 Scope. This appendix addresses symbols that support air equipment and weapons in the C2 domain. The tables in this appendix present the icons and modifiers for the air domain. This appendix is divided into two sections (see figure C-1): 1) equipment and platform symbols (see section C.6) and 2) missile symbols (see section C.7). This appendix is a mandatory part of the standard. The information contained herein is intended for compliance.

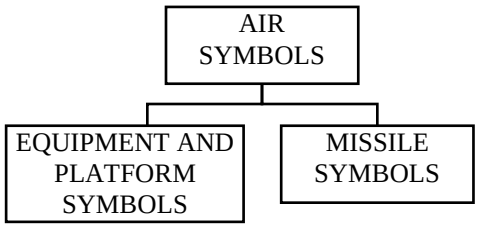

FIGURE C-1. Air appendix sections.

C.2 APPLICABLE DOCUMENTS

Specific documents in 2.2 of this standard apply to this appendix.

C.3 DEFINITIONS

The definitions in section 3 of this standard apply to this appendix.

C.4 GENERAL REQUIREMENTS

C.4.1 Organization. This appendix contains technical specifications, a symbol coding scheme, a symbology hierarchy and air symbology.

C.5 DETAILED REQUIREMENTS

C.5.1 Technical specifications. Composition, construction and display of symbols are explained in the detailed requirements section of the standard.

C.5.2 Symbol identification coding scheme. A symbol identification code (SIDC) is a numeric string that may be used to provide the unique identifier necessary to display or exchange symbol information between MIL-STD-2525 compliant systems. Refer to Appendix A for SIDC positions and descriptions.

C.5.3 Composition of air symbols. A standard method for constructing symbols is presented. Refer to 5.3.8 for an explanation of symbol composition. Figure C-2 shows an example of an air equipment symbol.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

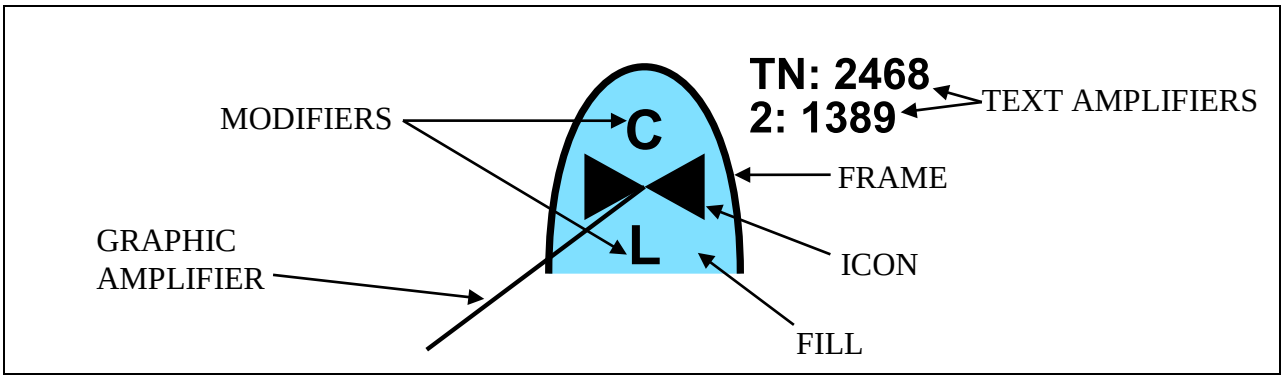

FIGURE C-2. Air symbol components.

C.5.3.1 Symbol building process. Table C-I depicts the symbol building process for air symbols. The process is identical for icons and modifiers requiring the vertical bounding octagon.

TABLE C-I. Air symbol building process.

STEP	DESCRIPTION	EXAMPLE
1.	Choose the frame that matches the standard identity of the object from the air column in tables I, II, or III. In this example, the standard identity is friend. The example depicts a “friendly air track.”	2.	Choose an icon for the main sector of the bounding octagon. In this example, the icon is “military rotary-wing,” an air entity type. The example depicts a “friendly military rotary-wing aircraft.”	3.	If required, choose a modifier to depict an additional characteristic of the icon. In this example, the modifier is “cargo,” a sector 1 modifier. The example depicts a “friendly military rotary-wing cargo aircraft.”	
Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

TABLE C-I. Air symbol building process - Continued.

STEP	DESCRIPTION	EXAMPLE
4.	If required, choose a modifier to depict another characteristic of the icon. In this example, the modifier is "light," a sector 2 modifier. The example depicts a "friendly military rotary-wing cargo aircraft with light cargo capacity."	5.	The finished symbol will appear as shown in the example.	
C.5.3.2 Icons and modifiers. All icons shall be placed within the main sector of the bounding octagon (see table C-I). When depicted, modifiers shall be placed in sectors 1 or 2 as appropriate (see table C-I). Only one modifier may be placed in each sector at a given time. Multiple modifiers in the same position are prohibited due to legibility concerns.

C.5.3.3 Amplifiers.

C.5.3.3.1 Heading. The purpose of the static text amplifiers described in this appendix is to standardize the display of additional alphanumerical information on identity, movement and location and capabilities. See 5.1.6 for more information on amplifiers.
Figure C-3 shows the placement of air symbol amplifiers around the friend symbol frame.
Table C-II provides descriptions and formats of each amplifier.

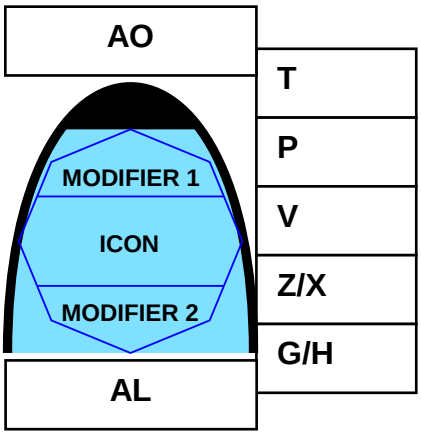

FIGURE C-3. Placement of air symbol amplifiers.

Check the source to verify that this is the current version before use.

TABLE C-II. Descriptions and formats of air symbol amplifiers.

FIELD	FIELD TITLE	DESCRIPTION	FORMAT
A	Air Vehicle/Air Vehicle Type Icon	Uses icon and sector modifiers	
G	Staff Comments	A text amplifier for units, equipment and installations; content is implementation specific.	
H	Additional Information	A text amplifier for units, equipment and installations; content is implementation specific.	
P	IFF/SIF	A text amplifier displaying IFF/SIF Identification modes and codes. Display priority: Mode 5, Mode S, Mode 4, Mode 2, Mode 3.	Mode 2 Prefix: 2:#### Example: 2:1234
T	Unique Designation (Track Number)	A text amplifier for units, equipment and installations that uniquely identifies a particular symbol or track number.	Prefix = TN:##### Example: TN:13579
V	Type	A text amplifier for equipment that indicates types of equipment.	
X	Altitude	A text amplifier for units that displays altitude/ flight level. See 5.3.6.5 for content.	Measurement units shall be displayed within the string Examples: 1500MSL FL150
Z	Speed	A text amplifier for units and equipment that displays velocity as set forth in MIL-STD-6040.	
AL	Operational Condition	A graphic amplifier for equipment or installations that indicates operational condition or capacity.	Operational Condition amplifier, if used, shall be comprised of only one color. Ex. Aircraft: Red - damaged, Green – fully capable Ex: Missile: Red – imminent threat, Green – no threat
AO	Engagement Bar	A graphic amplifier placed immediately atop the symbol. May denote, 1) local/remote status; 2) engagement status; and 3) weapon type.	A:BBB-CC, where A = remote/local BBB = engagement status CC = weapon asset

C.5.3.3.2 Graphic amplifiers. Graphic amplifiers can be static, located in a fixed position in relation to a track's symbol, or dynamic and move about the symbol based on the track's characteristics. See 5.1.6 for more information on amplifiers, including examples of dynamic amplifiers.

APPENDIX D - LAND SYMBOLS

D.1 SCOPE

D.1.1 Scope. This appendix addresses symbols that support land units, equipment and installations in the C2 domain. The tables in this appendix present the icons and modifiers for the land domain. This appendix is divided into four sections (see figure D-1): 1) unit symbols (see section C.6), 2) civilian unit/organization symbols (see section C.7), 3) equipment symbols (see section C.8) and 4) installation symbols (see section C.9). This appendix is a mandatory part of the standard. The information contained herein is intended for compliance.

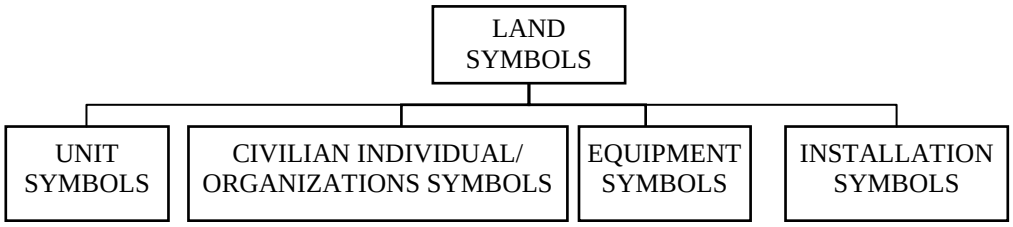

FIGURE D-1. Land appendix sections.

D.2 APPLICABLE DOCUMENTS

Specific documents in 2.2 of this standard apply to this appendix.

D.3 DEFINITIONS

The definitions in section 3 of this standard apply to this appendix.

D.4 GENERAL REQUIREMENTS

D.4.1 Organization. This appendix contains technical specifications, a symbol coding scheme, a symbology hierarchy and land symbology.

D.5 DETAILED REQUIREMENTS

D.5.1 Technical specifications. Composition, construction and display of symbols are explained in the detailed requirements section of the standard.

D.5.2 Symbol identification coding scheme. A symbol identification code (SIDC) is a numeric string that may be used to provide the unique identifier necessary to display or exchange symbol information between MIL-STD-2525 compliant systems. Refer to Appendix A for SIDC positions and descriptions.

D.5.3 Composition of land symbols. A standard method for constructing symbols is presented. Refer to 5.3.8 for an explanation of symbol composition. Figure D-2 shows an example of a land unit symbol.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

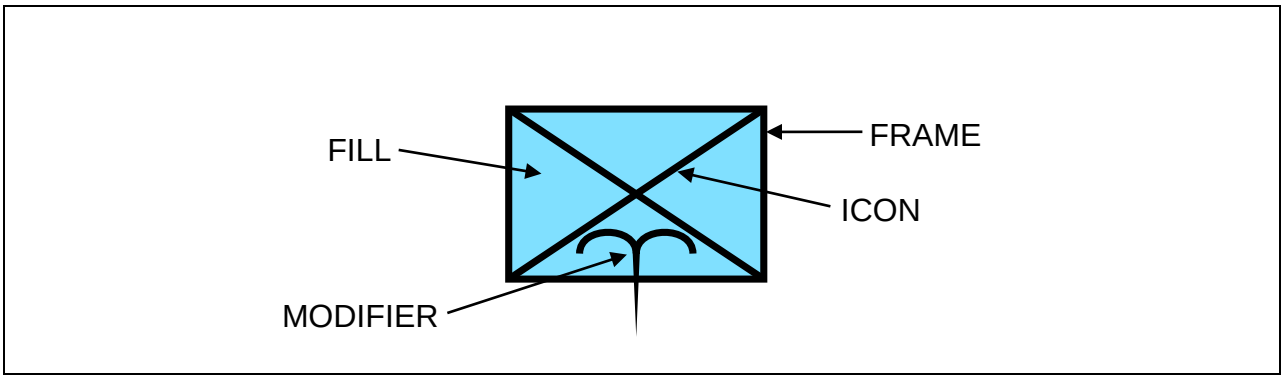

FIGURE D-2. Land symbol components.

D.5.3.1 Symbol building process. Table D-I depicts the symbol building process for land symbols. The process is identical for icons and modifiers requiring the vertical bounding octagon.

TABLE D-I. Land symbol building process.

STEP	DESCRIPTION	EXAMPLE
1.	Choose the frame that matches the standard identity and land symbol type of the object from the land columns in tables I, II, or III. In this example, the standard identity is friend and the land symbol type is unit. The example depicts a “friendly unit.”	2.	Choose an icon for the symbol. In this example, the icon is “infantry,” a land entity type. The infantry icon is a full frame icon; therefore, the friend version of the infantry icon shall be used with the friend frame. If the frame were hostile, then the hostile version of the infantry icon would be used. The example depicts a “friendly infantry unit.”	3.	If required, choose a modifier to depict an additional characteristic of the icon. In this example, the modifier is “airborne,” a sector 2 modifier. The example depicts a “friendly airborne infantry unit.”	
Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

TABLE D-I. Land symbol building process - Continued.

STEP	DESCRIPTION	EXAMPLE
4.	The finished symbol will appear as shown in the example.	
D.5.3.2 Icons and modifiers. All icons shall be placed within the main sector of the bounding octagon (see table D-I). When depicted, modifiers shall be placed in sectors 1 or 2 as appropriate (see table D-I). Only one modifier may be placed in each sector at a given time. Multiple modifiers in the same position are prohibited due to legibility concerns.

D.5.3.3 Amplifiers.

D.5.3.3.1 Text amplifiers. The purpose of the static text amplifiers described in this appendix is to standardize the display of additional alphanumerical information on identity, movement and location and capabilities. See 5.1.6 for more information on amplifiers. Figure D-3 shows the placement of land symbol amplifiers around the friend symbol frame. Table D-II provides descriptions and formats of each amplifier.

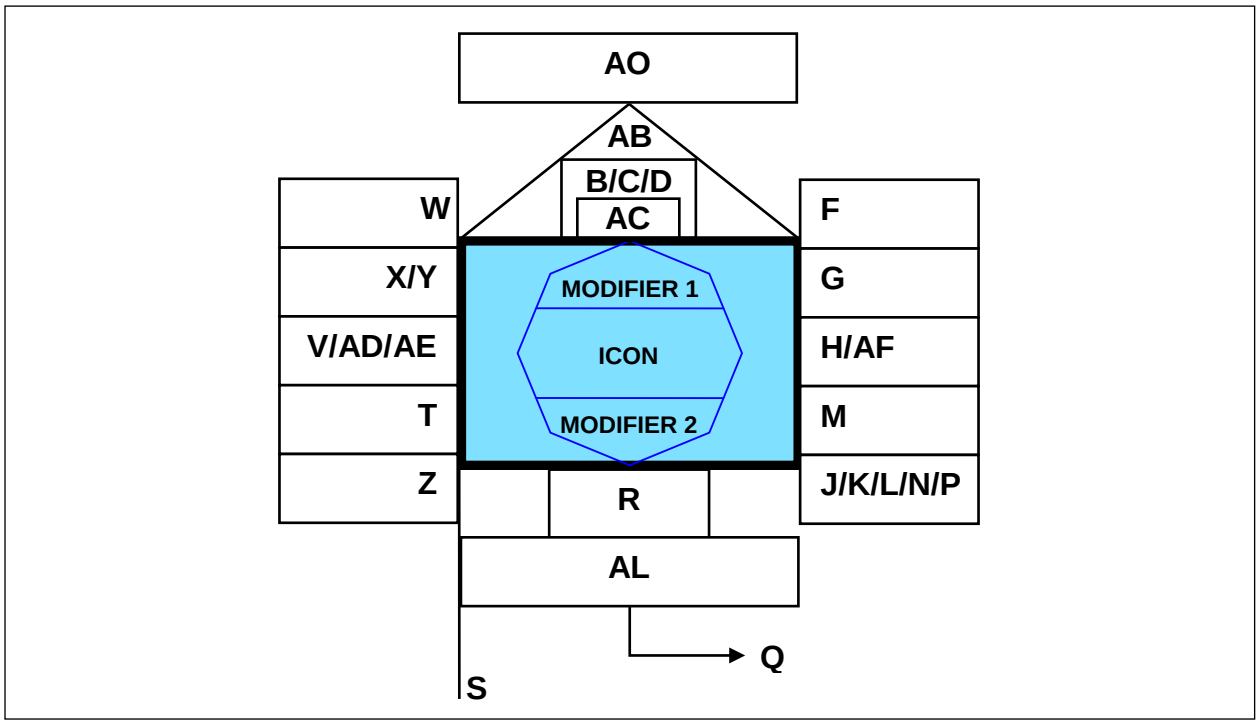

FIGURE D-3. Placement of land symbol amplifiers.

TABLE D-II. Descriptions and formats of land symbol amplifiers.

FIELD	FIELD TITLE	DESCRIPTION	FORMAT
A	Basic Branch/Function Icon	The innermost part of a symbol that represents a joint military object (see 5.3.4).	
B	Echelon	A graphic amplifier in a unit symbol that identifies command level (see table D-III below and figure 13 in the base document).	
C	Quantity	A text amplifier in an equipment symbol that identifies the number of items present.	
D	Task Force Indicator	A graphic amplifier that identifies a unit or an activities symbol as a task force (see 5.3.6.3 and figure 13 in the base document).	
F	Reinforced or Reduced	A text amplifier in a unit symbol that displays (+) for reinforced, (-) for reduced, (±) reinforced and reduced.	
G	Staff Comments	A text amplifier for units, equipment and installations; content is implementation specific.	
H	Additional Information	A text amplifier for units, equipment and installations; content is implementation specific.	
J[1]	Evaluation Rating	A text amplifier for units, equipment and installations that consists of a single-letter reliability rating and a single digit credibility rating: **Reliability Ratings:** A-completely reliable B-usually reliable C-fairly reliable D-not usually reliable E-unreliable F-reliability cannot be judged. **Credibility Ratings:** 1-confirmed by other sources 2-probably true 3-possibly true 4-doubtfully true 5-improbable 6-truth cannot be judged.

Check the source to verify that this is the current version before use.

TABLE D-II. Descriptions and formats of land symbol amplifiers - Continued.

FIELD	FIELD TITLE	DESCRIPTION	FORMAT
K	Combat Effectiveness	A text amplifier for units and installations that indicates effectiveness. The entries are: fully operational (FO) substantially operational (SO) marginally operational (MO) not operational (NO) unknown (UNK).	
L	Signature Equipment	A text amplifier for hostile equipment; "**!**" indicates detectable electronic signatures.	
M	Higher Formation	A text amplifier for units that indicates number or title of higher echelon command (corps are designated by Roman numerals).	
N	Hostile (Enemy)	A text amplifier for equipment; letters "ENY" denote hostile symbols.	
P	IFF/SIF	A text amplifier displaying IFF/SIF Identification modes and codes. Display priority: Mode 5, Mode S, Mode 4, Mode 2, Mode 3.	Mode 2 Prefix: 2:#### **Example**: 2:1234
Q	Direction of Movement Indicator	A graphic amplifier for units, equipment and installations that identifies the direction of movement or intended movement of an object (see 5.3.6.7 and figure 13 in the base document).	
R	Mobility Indicator	A graphic amplifier for equipment that depicts the mobility of an object (see 5.3.6.8, figure 13 and table VIII in the base document).	
S	Headquarters Staff Indicator/Offset Location Indicator	**Headquarters staff indicator**: A graphic amplifier for units, equipment and installations that identifies a unit as a headquarters (see table D-III below and figure 13 in the base document). **Offset location indicator**: A graphic amplifier for units, equipment and installations used when placing an object away from its actual location (see 5.3.6.4 and figure 13 in the base document).	
T	Unique Designation (Track Number)	A text amplifier for units, equipment and installations that uniquely identifies a particular symbol or track number.	Prefix = TN:##### **Example**: TN:13579
V	Type	A text amplifier for equipment that indicates types of equipment.	

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

TABLE D-II. Descriptions and formats of land symbol amplifiers - Continued.

FIELD	FIELD TITLE	DESCRIPTION	FORMAT
W[2]	Date-Time Group (DTG)	An alphanumeric designator for displaying a date-time group (DDHHMMSSZMONYYYY) or "O/O" for on order. The date-time group is composed of a group of six numeric digits with a time zone suffix and the standardized three-letter abbreviation for the month followed by four digits representing the year. The first pair of digits represents the day; the second pair, the hour; the third pair, the minutes. For automated systems, two digits may be added before the time zone suffix and after the minutes to designate seconds.	
X	Altitude/Depth	A text amplifier for units, equipment and installations that displays either altitude, flight level, depth for submerged objects, or height of equipment or structures on the ground. See 5.3.6.5 for content.	Measurement units shall be displayed within the string **Examples**: 1500MSL FL150
Y	Location	A text amplifier for units, equipment and installations that displays a symbol's location in degrees, minutes and seconds (or in UTM or other applicable display format).	
Z	Speed	A text amplifier for units and equipment that displays velocity as set forth in MIL-STD- 6040.	
AA	Special C2 Headquarters	A text modifier for units; indicator is contained inside the frame. A named command such as SHAPE, PACOM, CENTCOM, joint, multinational, or coalition commands such as CJTF, JTF, MJTF.	
AB	Feint/Dummy Indicator	A graphic amplifier for units, equipment and installations that identifies an offensive or defensive unit intended to draw the enemy's attention away from the area of the main attack (see 5.3.6.3 and figure 13 in the base document).	
AC	Installation	A graphic amplifier for units, equipment and installations used to show that a particular symbol denotes an installation (see 5.3.6.1 and figure 13 in the base document).	
AD	Platform Type	Electronic intelligence notation (ELNOT) or communications intelligence notation (CENOT)	
AE	Equipment Teardown Time	Equipment teardown time in minutes.	

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

TABLE D-II. Descriptions and formats of land symbol amplifiers - Continued.

FIELD	FIELD TITLE	DESCRIPTION	FORMAT
AF	Common Identifier	Example: “Hawk” for Hawk SAM system.	
AL	Operational Condition	A graphic amplifier for equipment or installations that indicates operational condition or capacity.	Operational Condition amplifier, if used, shall be comprised of only one color. **Ex. Aircraft**: Red - damaged, Green – fully capable **Ex: Missile**: Red – imminent threat, Green – no threat
AO	Engagement Bar	A graphic amplifier placed immediately atop the symbol. May denote, 1) local/remote status; 2) engagement status; and 3) weapon type.	A:BBC-CC, where A = remote/local BBB = engagement status CC = weapon asset
AR	Special Designator	Special track designators such as Non-Real Time (NRT) and Tactically Significant (SIG) tracks are denoted here	

Notes: 1. Field J: See TC 2-33.4.
2. Field W: D = day, H = hour, M = minute, S = second, Z = Greenwich or local time, MON= month and Y = year.

D.5.3.3.2 Graphic amplifiers. Graphic amplifiers can be static, located in a fixed position in relation to a track’s symbol, or dynamic and move about the symbol based on the track’s characteristics. See 5.1.6 for more information on amplifiers, including examples of dynamic amplifiers.

D.5.3.3.2.1 Headquarters staff amplifier. The headquarters staff amplifier is a line extending downward from the left side of the frame that identifies units, equipment and installations as headquarters. The headquarters staff amplifier shall extend a distance of one octagon height below the bottom of the frame. See figure D-4.

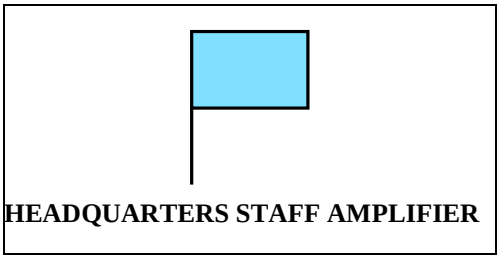

FIGURE D-4. Headquarters staff amplifier.

APPENDIX E - SEA SURFACE SYMBOLS

E.1 SCOPE

E.1.1 Scope. This appendix addresses symbols that support sea surface units, equipment and installations (UEI) in the C2 domain. The tables in this appendix present the icons and modifiers for the sea surface domain. This appendix is a mandatory part of the standard. The information contained herein is intended for compliance.

E.2 APPLICABLE DOCUMENTS

Specific documents in 2.2 of this standard apply to this appendix.

E.3 DEFINITIONS

The definitions in section 3 of this standard apply to this appendix.

E.4 GENERAL REQUIREMENTS

E.4.1 Organization. This appendix contains technical specifications, a symbol coding scheme, a symbology hierarchy and sea surface symbology.

E.5 DETAILED REQUIREMENTS

E.5.1 Technical specifications. Composition, construction and display of symbols are explained in the detailed requirements section of the standard.

E.5.2 Symbol identification coding scheme. A symbol identification code (SIDC) is a numeric string that may be used to provide the unique identifier necessary to display or exchange symbol information between MIL-STD-2525 compliant systems. Refer to Appendix A for SIDC positions and descriptions.

E.5.3 Composition of sea surface symbols. A standard method for constructing symbols is presented. Refer to 5.3.8 for an explanation of symbol composition. Figure E-1 shows an example of a sea surface equipment symbol.

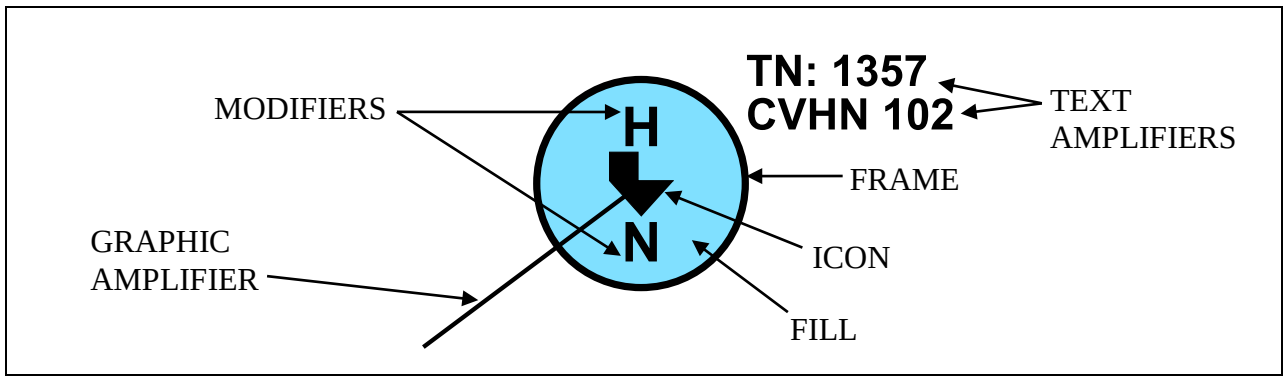

FIGURE E-1. Sea surface symbol components.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

E.5.3.1 Symbol building process. Table E-I depicts the symbol building process for sea surface symbols. The process is identical for icons and modifiers requiring the vertical bounding octagon.

TABLE E-I. Sea surface symbol building process.

STEP	DESCRIPTION	EXAMPLE
1.	Choose the frame that matches the standard identity of the object from the sea surface column in tables I, II, or III. In this example, the standard identity is friend. The example depicts a “friendly sea surface track.”	2.	Choose an icon for the main sector of the bounding octagon. In this example, the icon is “carrier,” a sea surface entity type. The example depicts a “friendly military combatant carrier.”	3.	If required, choose a modifier to depict an additional characteristic of the icon. In this example, the modifier is “helicopter equipped/VTOL,” a sector 1 modifier. The example depicts a “friendly military combatant carrier, helicopter equipped/VTOL.”	4.	If required, choose a modifier to depict another characteristic of the icon. In this example, the modifier is “nuclear powered,” a sector 2 modifier. The example depicts a “friendly military combatant carrier, helicopter equipped/VTOL, nuclear powered.”	5.	The finished symbol will appear as shown in the example.	

E.5.3.2 Icons and modifiers. All icons shall be placed within the main sector of the bounding octagon (see table D-I). When depicted, modifiers shall be placed in sectors 1 or 2 as

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

appropriate (see table D-I). Only one modifier may be placed in each sector at a given time. Multiple modifiers in the same position are prohibited due to legibility concerns.

E.5.3.3 Amplifiers.

E.5.3.3.1 Text amplifiers. The purpose of the static text amplifiers described in this appendix is to standardize the display of additional alphanumerical information on identity, movement and location and capabilities. See 5.1.6 for more information on amplifiers. Figure E-2 shows the placement of sea surface symbol amplifiers around the friend symbol frame. Table D-II provides descriptions and formats of each amplifier.

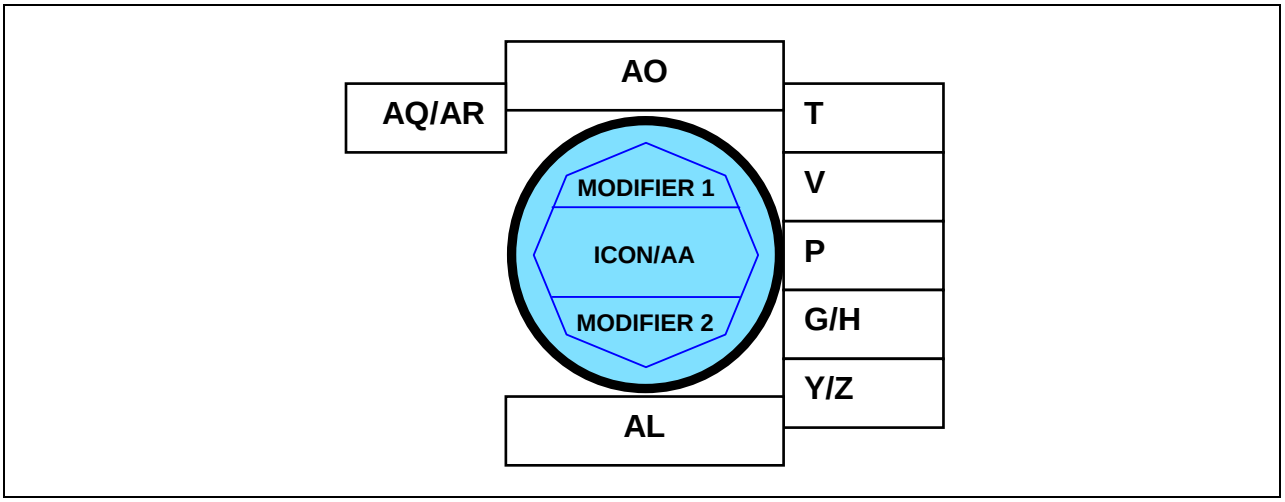

FIGURE E-2. Placement of sea surface symbol amplifiers.

TABLE E-II. Descriptions and formats of sea surface symbol amplifiers.

FIELD	FIELD TITLE	DESCRIPTION	FORMAT
A	Ship/Ship Type Icon	Uses icon and sector modifiers	
G	Staff Comments	A text amplifier for units, equipment and installations; content is implementation specific.	
H	Additional Information	A text amplifier for units, equipment and installations; content is implementation specific.	
P	Automatic Identification System (AIS)	A text amplifier displaying the maritime Automatic Identification System.	
T	Unique Designation (Track Number)	A text amplifier for units, equipment and installations that uniquely identifies a particular symbol or track number.	Prefix = TN:##### Example: TN:13579
V	Type	A text amplifier for equipment that indicates types of equipment.

TABLE E-II. Descriptions and formats of sea surface symbol amplifiers - Continued.

FIELD	FIELD TITLE	DESCRIPTION	FORMAT
Y	Location	A text amplifier for units, equipment and installations that displays a symbol's location in degrees, minutes and seconds (or in UTM or other applicable display format).	
Z	Speed	A text amplifier for CBRN, units and equipment that displays velocity as set forth in MIL-STD- 6040.	
AL	Operational Condition	A graphic amplifier for equipment or installations that indicates operational condition or capacity.	Operational Condition amplifier, if used, shall be comprised of only one color. Ex. Aircraft: Red - damaged, Green – fully capable Ex: Missile: Red – imminent threat, Green – no threat
AO	Engagement Bar	A graphic amplifier placed immediately atop the symbol. May denote, 1) local/remote status; 2) engagement status; and 3) weapon type.	A:BBB-CC, where A = remote/local BBB = engagement status CC = weapon asset
AQ	Guarded Unit	During ballistic missile defense, some tracks are designated as guarded by a particular unit.	The 2-character string, BG
AR	Special Designator	Special track designators, such as Non-Real Time (NRT) and Tactically Significant (SIG) tracks, are denoted here.	The 3-character strings, NRT or SIG

E.5.3.3.2 Graphic amplifiers. Graphic amplifiers can be static, located in a fixed position in relation to a track's symbol, or dynamic and move about the symbol based on the track's characteristics. See 5.1.6 for more information on amplifiers, including examples of dynamic amplifiers.

E.6 SEA SURFACE UNIT, EQUIPMENT AND INSTALLATION SYMBOLS

E.6.1 Sea surface unit, equipment and installation symbols. This section includes the lists of icons and modifiers for building sea surface unit, equipment and installation symbols.

E.6.2 Sea surface unit, equipment and installation icons. Table E-III depicts sea surface unit, equipment and installation icons.

Check the source to verify that this is the current version before use.

In accordance with STANAG 1166, Standard Ship Designator System, single letter codes specify the type of merchant ship, while two- and three-letter codes specify the type of military ship. For other types of civilian surface vessels, the letter codes of the icon are without a STANAG reference. Military symbols are depicted with black-filled icons, whereas civilian symbols are depicted with white-filled icons.

EXPENDABLE Symbol Set Code: 30 Code: 15	USV CONTROL		Used with USV only.

E.6.5 Sea surface local tracks. Local tracks are tracks internal to a particular Combat Information Center (CIC). These tracks are not intended to be transmitted outside the ship's CIC. Table E-VII depicts local tracks. Modifiers are not permitted with local track symbols.

E.6.5.1 Fused tracks. Fused tracks are tracks in the process of classification. Multiple sources of incoming information need to be adjudicated and combined (fused) into a single track. Fused tracks are denoted by a question mark ("?") encapsulated within an hourglass icon (see table E-VII). All fused tracks have a pending standard identity frame.

TABLE E-VI. Own Ship.

DESCRIPTION	ICON	REMARKS
OWN SHIP Type: Entity (Local) Symbol Set Code: 30 Code: **15**0000 Icon Type: Full Octagon		The diameter of the icon shall be 1L. This icon shall be used with a friend standard identity only.

APPENDIX F - SUBSURFACE SYMBOLS

F.1 SCOPE

F.1.1 Scope. This appendix addresses symbols that support subsurface units, equipment and installations in the C2 domain. The tables in this appendix present the icons and modifiers for the subsurface domain. This appendix is divided into two sections (see figure F-1): 1) unit, equipment and installation symbols (see section F.6) and 2) mine warfare symbols (see section F.7). This appendix is a mandatory part of the standard. The information contained herein is intended for compliance.

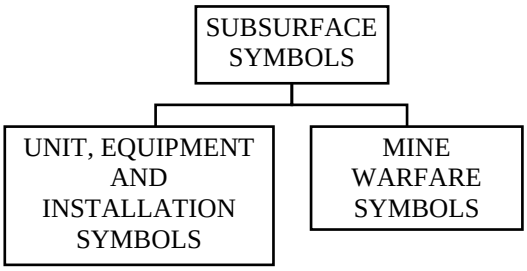

FIGURE F-1. Subsurface appendix sections.

F.2 APPLICABLE DOCUMENTS

Specific documents in 2.2 of this standard apply to this appendix.

F.3 DEFINITIONS

The definitions in section 3 of this standard apply to this appendix.

F.4 GENERAL REQUIREMENTS

F.4.1 Organization. This appendix contains technical specifications, a symbol coding scheme, a symbology hierarchy and subsurface symbology.

F.5 DETAILED REQUIREMENTS

F.5.1 Technical specifications. Composition, construction and display of symbols are explained in the detailed requirements section of the standard.

F.5.2 Symbol identification coding scheme. A symbol identification code (SIDC) is a numeric string that may be used to provide the unique identifier necessary to display or exchange symbol information between MIL-STD-2525 compliant systems. Refer to Appendix A for SIDC positions and descriptions.

F.5.3 Composition of subsurface symbols. A standard method for constructing symbols is presented. Refer to 5.3.8 for an explanation of symbol composition. Figure F-2 shows an example of a subsurface equipment symbol.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

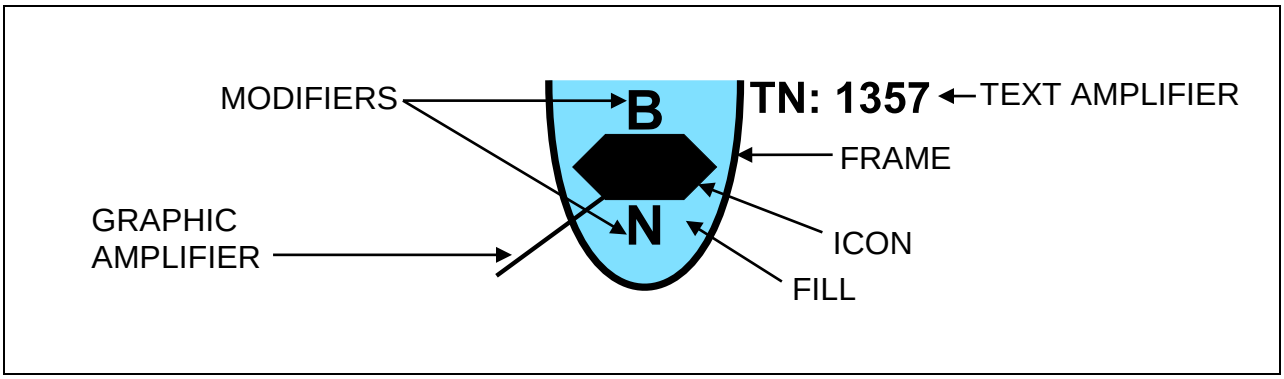

FIGURE F-2. Subsurface symbol components.

F.5.3.1 Symbol building process. Table F-I depicts the symbol building process for subsurface symbols. The process is identical for icons and modifiers requiring the vertical bounding octagon.

TABLE F-I. Subsurface symbol building process.

STEP	DESCRIPTION	EXAMPLE
1.	Choose the frame that matches the standard identity of the object from the subsurface column in tables I, II, or III. In this example, the standard identity is friend. The example depicts a “friendly subsurface track.”	2.	Choose an icon for the main sector of the bounding octagon. In this example, the icon is “submarine,” a subsurface entity type. The example depicts a “friendly submarine.”	3.	If required, choose a modifier to depict an additional characteristic of the icon. In this example, the modifier is “ballistic missile,” a sector 1 modifier. The example depicts a “friendly submarine with ballistic missile weapons capability.”	
Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

TABLE F-I. Subsurface symbol building process - Continued.

STEP	DESCRIPTION	EXAMPLE
4.	If required, choose a modifier to depict another characteristic of the icon. In this example, the modifier is "nuclear powered," a sector 2 modifier. The example depicts a "friendly nuclear powered submarine with ballistic missile weapons capability."	5.	The finished symbol will appear as shown in the example.	
F.5.3.2 Icons and modifiers. All icons shall be placed within the main sector of the bounding octagon or fill the octagon, as indicated in table F-III. When depicted, modifiers shall be placed in sectors 1 or 2 as appropriate (see table F-I). Only one modifier may be placed in each sector at a given time. Multiple modifiers in the same position are prohibited due to legibility concerns.

F.5.3.3 Amplifiers.

F.5.3.3.1 Text amplifiers. The purpose of the static text amplifiers described in this appendix is to standardize the display of additional alphanumerical information on identity, movement and location and capabilities. See 5.1.6 for more information on amplifiers. Figure F-3 shows the placement of subsurface symbol amplifiers around the friend symbol frame. Table F-II provides descriptions and formats of each amplifier.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

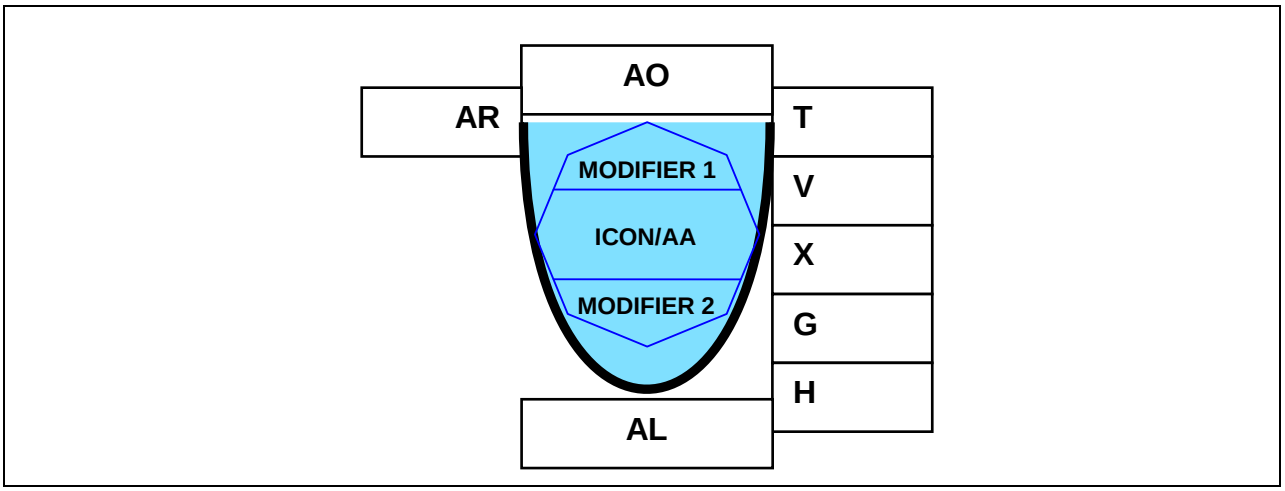

FIGURE F-3. Placement of subsurface symbol amplifiers.

TABLE F-II. Descriptions and formats of subsurface symbol amplifiers.

FIELD	FIELD TITLE	DESCRIPTION	FORMAT
A	Sub/Sub Type Icon	Uses icon and sector modifiers	
G	Staff Comments	A text amplifier for units, equipment and installations; content is implementation specific.	
H	Additional Information	A text amplifier for units, equipment and installations; content is implementation specific.	
T	Unique Designation (Track Number)	A text amplifier for units, equipment and installations that uniquely identifies a particular symbol or track number.	Prefix = TN:##### Example: TN:13579
V	Type	A text amplifier for equipment that indicates types of equipment.	
X	Depth	A text amplifier for equipment that displays depth for submerged objects.	Measurement units (FT, M) shall be displayed within the string. Ex: 105 FT
AL	Operational Condition	A graphic amplifier for equipment or installations that indicates operational condition or capacity.	Operational Condition amplifier, if used, shall be comprised of only one color. Ex. Aircraft: Red - damaged, Green – fully capable Ex: Missile: Red – imminent threat, Green – no threat
AO	Engagement Bar	A graphic amplifier placed immediately atop the symbol. May denote, 1) local/remote status; 2) engagement status; and 3) weapon type.	A:BBB-CC, where A = remote/local BBB = engagement status CC = weapon asset
AR	Special Designator	Special track designators such as Non-Real Time (NRT) and Tactically Significant (SIG) tracks are denoted here.	The 3-character strings, NRT or SIG

Check the source to verify that this is the current version before use.

F.5.3.3.2 Graphic amplifiers. Graphic amplifiers can be static, located in a fixed position in relation to a track's symbol, or dynamic and move about the symbol based on the track's characteristics. See 5.1.6 for more information on amplifiers, including examples of dynamic amplifiers.

F.6 SUBSURFACE UNIT, EQUIPMENT AND INSTALLATION SYMBOLS

F.6.1 Subsurface unit, equipment and installation symbols. This section includes the lists of icons and modifiers for building subsurface unit, equipment and installation symbols.

F.6.2 Subsurface unit, equipment and installation icons. Table F-III depicts subsurface unit, equipment and installation icons. Military symbols are depicted with black-filled icons, whereas civilian symbols are depicted with white-filled icons. Sea mines and sea mine decoys are presented in section F.7.

TABLE F-III. Subsurface unit, equipment and installation icons.

DESCRIPTION	ICON	REMARKS

F.7 MINE WARFARE SYMBOLS

F.7.1 Mine warfare symbols. This section includes the lists of icons for building mine warfare (MIW) symbols. There are no modifiers in MIW symbols.

F.7.2 Mine warfare icons. MIW symbols are represented using Mine Warfare Environmental Decision Aids Library (MEDAL) icons embedded within MIL-STD-2525 standard identity frames. The color in MEDAL icons represents the threat level of that contact. Red denotes mine, orange denotes mine-like contact (MILCO), yellow denotes mine-like echo (MILEC), dark green denotes non-mine mine-like object (or non-mine) and bright green denotes neutralized mine. An alternative icon set directly corresponding to MEDAL icons may also be used. The alternative set depicts the same MEDAL icons, but depicts them as black icons eliminating the color threat coding scheme. The MEDAL icons shall be used with unfilled subsurface frames. The alternative icons shall be used with the normal subsurface frames (see tables F-I, F-II and F-III). Figure F-4 shows examples of framed MEDAL and alternative icons. Table F-VII depicts mine warfare icons.

APPENDIX G - ACTIVITIES SYMBOLS

G.1 SCOPE

G.1.1 Scope. In this appendix, activities across the range of military operations use various symbols to predominately show support. Activities include stability operations, defense support to civil authorities, foreign humanitarian assistance, incidents, natural events, and operations. Among the types of activities represented are acts of terrorism, sabotage, crime, natural disasters, relief operations, and the uncontrolled movement of large numbers of people. The tables in this appendix present the icons and modifiers used for support stability operations, defense support to civil authorities, and foreign humanitarian assistance. Many of these icons represent emergency first response events used in a civilian community. This appendix is a mandatory part of the standard. The information contained herein is intended for compliance.

G.2 APPLICABLE DOCUMENTS

Specific documents in 2.2 of this standard apply to this appendix.

G.3 DEFINITIONS

The definitions in section 3 of this standard apply to this appendix.

G.4 GENERAL REQUIREMENTS

G.4.1 Organization. This appendix contains technical specifications, a symbol coding scheme, a symbology hierarchy and supports activies symbology.

G.5 DETAILED REQUIREMENTS

G.5.1 Technical specifications. Composition, construction and display of symbols are explained in the detailed requirements section of the standard.

G.5.2 Symbol identification coding scheme. A symbol identification code (SIDC) is a numeric string that may be used to provide the unique identifier necessary to display or exchange symbol information between MIL-STD-2525 compliant systems. Refer to Appendix A for SIDC positions and descriptions.

G.5.3 Composition of activities symbols. A standard method for constructing symbols is presented. Refer to 5.3.8 for an explanation of symbol composition. Figure G-1 shows an example of a activites symbol.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

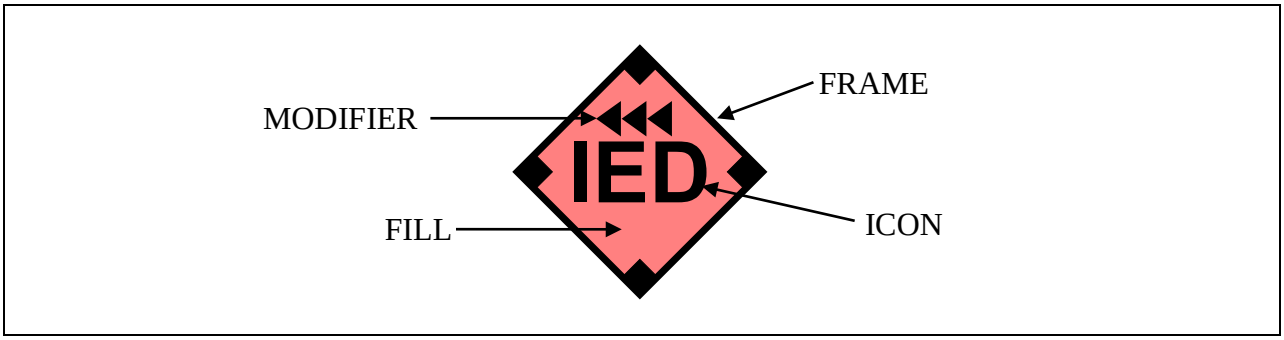

FIGURE G-1. Activities components.

G.5.3.1 Symbol building process. Table G-I depicts the symbol building process for activities symbols. The process is identical for icons and modifiers requiring the vertical bounding octagon. Activities symbols use the land frames for units, equipment and installations, as well as the activity/event frames for incidents.

TABLE G-I. Activities symbol building process.

STEP	DESCRIPTION	EXAMPLE
1.	Choose the frame that matches the standard identity of the object from the activity/event column in tables I, II, or III. In this example, the standard identity is hostile. The example depicts a “hostile incident.”	2.	Choose an icon for the symbol. In this example, the icon is “IED,” an equipment entity subtype. The example depicts a “hostile IED incident.”	3.	If required, choose a modifier to depict an additional characteristic of the icon. In this example, the modifier is “hoax,” a sector 1 modifier. The example depicts “hostile IED hoax incident.” Note: There are no sector 2 modifiers in activities symbols.	
Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

TABLE G-I. Activities symbol building process - Continued.

STEP	DESCRIPTION	EXAMPLE
4.	The finished symbol will appear as shown in the example.	

G.5.3.2 Icons and modifiers. All icons shall be placed within the main sector of the bounding octagon (see table G-I). When depicted, modifiers shall be placed in sectors 1 or 2 as appropriate (see table G-I). Only one modifier may be placed in each sector at a given time. Multiple modifiers in the same position are prohibited due to legibility concerns.

G.5.3.3 Amplifiers.

G.5.3.3.1 Text amplifiers. The purpose of the static text amplifiers described in this appendix is to standardize the display of additional alphanumerical information on identity, movement and location and capabilities. See 5.1.6 for more information on amplifiers. Figure G-2 shows the placement of activities symbol amplifiers around the friend symbol frame. Table G-II provides descriptions and formats of each amplifier.

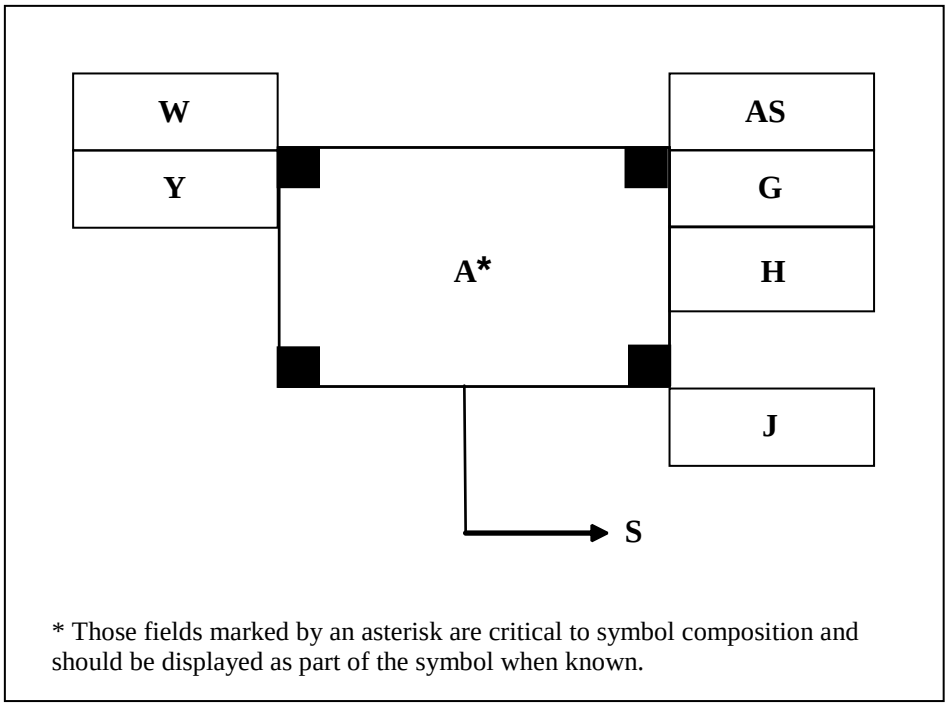

FIGURE G-2. Activities icon, modifier and amplifier fields.

Check the source to verify that this is the current version before use.

TABLE G-II. Description of icon, modifier and amplifier fields for activities symbols.

Field	Field Title	Description	Text/Graphic
A	Symbol	Symbol contains an icon in the "Main" sector of the bounding octagon and may contain a modifier in sector 1, sector 2, or both.	Either
G	Staff Comments	Free text. Can be used by staff for information required by commander.	Text
H	Additional Information	Free text.	Text
J	Evaluation Rating	Degree of confidence that may be placed on the information represented by the symbol. It is shown as one letter and one number made up of Reliability of Source and Credibility of Information. (STANAG 2511). Reliability of Source: A. Completely reliable B. Usually reliable C. Fairly reliable D. Not usually reliable E. Unreliable F. Reliability cannot be judged. Credibility of Information: 1. Confirmed by other sources 2. Probably true 3. Possibly true 4. Doubtful 5. Improbable 6. Truth cannot be judged.	Text
S	Offset Location Indicator	It is used to denote precise location.	Graphic
W	Date-Time Group	An alphanumeric designator for displaying a date-time group (DDHHMMSSZMONYY) or "O/O" for on order. The date-time group is composed of a group of six numeric digits with a time zone suffix and the standardized three-letter abbreviation for the month followed by two digits. The first pair of digits represents the day; the second pair, the hour; the third pair, the minutes. The last two digits of the year are after the month. For automated systems, two digits may be added before the time zone suffix and after the minutes to designate seconds.	Text
Y	Location	A text amplifier for units, equipment and installations that displays a symbol's location in degrees, minutes and decimal minutes (or in MGRS or other applicable display format).	Text
AS	Country Indicator	A three-letter code that indicates the country of origin of the organization (STANAG 1059). In stability activities, this field can be used for factions or groups.	Text

Check the source to verify that this is the current version before use.

G.5.3.3.2 Graphic amplifiers. Graphic amplifiers can be static, located in a fixed position in relation to a track's symbol, or dynamic and move about the symbol based on the track's characteristics. See 5.1.6 for more information on amplifiers, including examples of dynamic amplifiers.

G.6 ACTIVITIES SYMBOLS

G.6.1 Activities symbols. This section includes the lists of icons and modifiers for building activities symbols.

G.6.2 Activities icons. Table G-III depicts activities icons.

TABLE G-III. Activities icons.

DESCRIPTION	ICON	REMARKS

APPENDIX H - CONTROL MEASURE SYMBOLS

H.1 SCOPE

H.1.1 Scope. This appendix addresses symbols that support control measures as well as symbols for chemical, biological, radiological and nuclear (CBRN) incidents in the C2 domain. The tables in this appendix present the icons and amplifiers for control measures and CBRN. This appendix is a mandatory part of the standard. The information contained herein is intended for compliance. Ultimately, the joint force commander and his forces must be capable of accomplishing their mission, either directly or indirectly, by the employment of capabilities to create physical or psychological effects and be able to sustain such operations for as long as is necessary to achieve operational objectives. The principal method by which this capability is delivered is through the combination of joint operational capabilities and a range of mechanisms and control measures. This appendix establishes a standard system for the development and use of control measures symbols. Within this standard system there are series of control measure symbols that follow standard formats and there are control measure symbols that follow stand alone formats. This appendix provides rules for automated and hand-drawn symbols and examples for all control measure symbols. These control measure symbols are the standard for all command and control systems and simulations, including those used in live, virtual and planning. For many control measure symbols, there is a corresponding definition provided in this section. These definitions are provided to help add clarity in using these symbols. For ease of understanding and use the control measure symbols have been broken down into groups that correspond to the joint functions of command and control to include joint targeting, maneuver and fires, intelligence, force protection, sustainment and deception under information operations.

H.2 APPLICABLE DOCUMENTS

Specific documents in 2.2 of this standard apply to this appendix.

H.3 DEFINITIONS

The definitions in section 3 of this standard apply to this appendix.

H.4 GENERAL REQUIREMENTS

H.4.1 Organization. This appendix contains technical specifications, a symbol coding scheme, a symbology hierarchy and control measures symbology.

H.5 DETAILED REQUIREMENTS

H.5.1 Control measure symbols. Control measures are directives given to assign responsibilities, coordinate fires and maneuvers and control operations. They may be boundaries, special area designations and other unique markings related to operational environment geometry and necessary for planning and management of operations. Control measure symbols provide operational information that cannot be displayed via icon-based symbols alone. Control measures can be displayed as points, lines, areas, or tactical mission tasks.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

H.5.1.1 Composition of control measure symbols. Control measure symbols can be combined with other symbols, icons and amplifiers to display operational information (see figure H-1). They do not follow the same building rules as the icon-based symbols but shall be built in accordance with the rules specified in the control measure appendix.

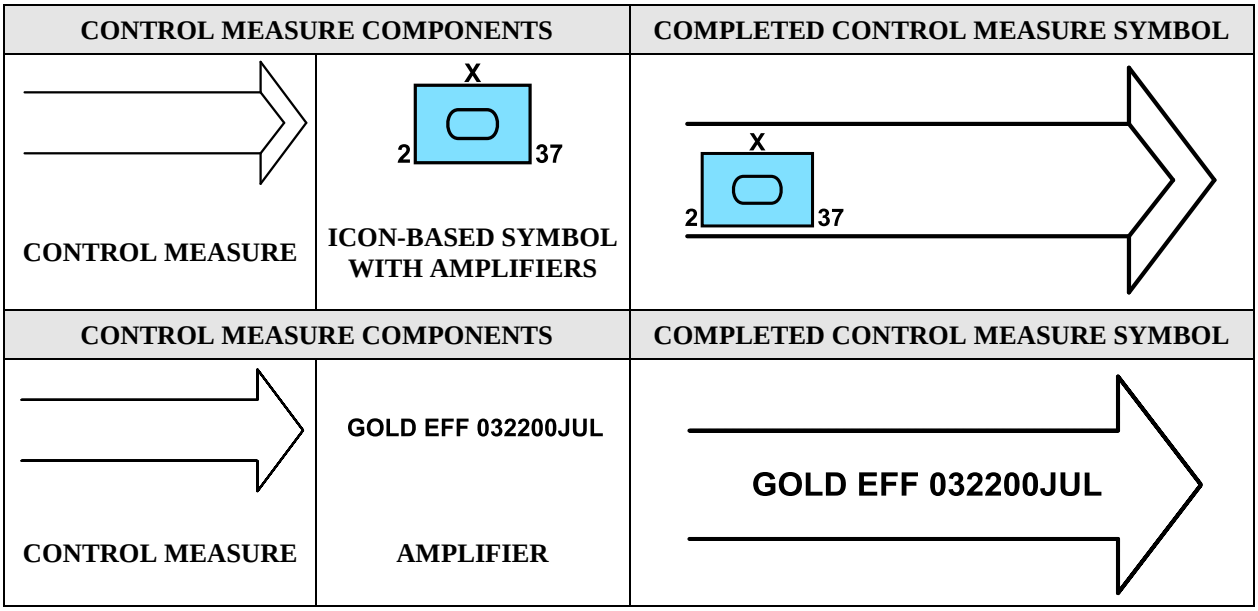

FIGURE H-1. Composition of control measure symbols.

H.5.1.1.1 Standard identity (color rules) for control measure symbols. The control measure symbols for monochrome systems shall be black or white, depending on display background. For color systems, control measures shall be black, blue (friendly), red (hostile), green (neutral or obstacles), or yellow (unknown or chemical, biological, radiological and nuclear cross-hatched contaminated area fill). If red is not available for hostile standard identity, the graphic shall be drawn in black with the abbreviation “ENY” placed on the graphic in at least two places for linear and multi point control measures and in one place for single point control measures.

H.5.1.1.2 Point control measure height. Unless specifically indicated otherwise in the size/shape parameter of a point control measure’s notes, the default point control measure symbol height should be 1L, where L is the default length and height of the bounding octagon (see 5.3.1).

H.5.1.1.3 Status. Status refers to whether a control measure exists at the location identified (status is “present”) or will in the future reside at that location (status is “planned”, “anticipated”, “suspected”, or “on order”). If a control measure is on order, the status code shall be specified “A – Anticipated/Planned” and field amplifier “W” shall be present and specified “O/O”. In general, linear control measures (including boundary lines) and area control measures shall be a solid line when indicating present status and a dashed line when indicating anticipated or planned status, as depicted in Table H-I. There are certain control measures such as counterattack which are drawn in the “present’” status with dashed lines. The codes for status in the SIDC are provided in the appendix for each symbology set.

Check the source to verify that this is the current version before use.

TABLE H-I. Present and planned status for control measures symbols.

	POINT GRAPHICS	BOUNDARY LINE GRAPHICS	AREA GRAPHICS
PRESENT POSITION (P)			ANTICIPATED, PLANNED, SUSPECTED, OR ON ORDER (A)			
H.5.1.1.4 Amplifiers. An amplifier provides optional additional information about a tactical symbol. The field ID, field title, description and maximum allowable display lengths of tactical symbol amplifiers are presented in table H-II. An example of each amplifier (both text and graphic indicators) is included in figure H-2.The default placement of amplifiers in fields for boundaries, points, lines and areas are shown in figures H-3, H-4, H-5 and H-6, respectively. An example of chemical, biological, radiological and nuclear (CBRN) events can be seen in table H-XIX. As indicated in figures H-3, H-4, H-5 and H-6, certain fields can be displayed more than once within a tactical symbol. In some cases, a tactical symbol may require multiple instances of a given amplifier in order to fully create or represent an object: examples of these fields are H, T, W and Y. The unnumbered fields should be filled before the numbered fields (i.e., fields W, H and T should be used before fields W1, H1 and T1). As indicated in table II, not all amplifiers are applicable to all tactical symbols. However, when any such amplifier is displayed, it shall be defined in accordance with the contents of this table and positioned in accordance with figures H-3, H-4, H-5, H-6 and table H-XIX.

TABLE H-II. Amplifier descriptions and maximum lengths for control measure symbols.

FIELD ID	FIELD TITLE	DESCRIPTION	P[1]	L[1]	A[1]	BL[1]	B/C[1]	R/N[1]
A	Symbol Icon	The innermost part of a symbol that represents a joint military object (see 5.3.4).	G[2]	G	G	G	G	G
B	Echelon	A graphic amplifier in a unit symbol that identifies command level (see tables D-III and D-V in the Land appendix and figure H-3 and figure H-6).	-	G	G	G	-	-
C	Quantity	A text amplifier in an equipment symbol that identifies the number of items present.	-	-	-	-	-	6[2]

TABLE H-II. Amplifier descriptions and maximum lengths for control measure symbols - Continued.

FIELD ID	FIELD TITLE	DESCRIPTION	P[1]	L[1]	A[1]	BL[1]	B/C[1]	R/N[1]
H	Additional Information	A**Error! Bookmark not defined.** text amplifier for control measure symbols; content is implementation specific.	20	20	20	-	20	20
N	Hostile (Enemy)	A text amplifier for control measure symbols; the letters "ENY" denote hostile control measure symbols.	3	3	3	3	3	3
Q	Direction of Movement Indicator	A graphic amplifier for events that identifies the direction of movement (see H.5.1.1.5 and table XIX).	-	-	-	-	G	G
S	Offset Location Indicator	A graphic amplifier for points and CBRN events used when placing an object away from its actual location (see H.5.1.1.7 and figures H-2, H-3, H-4, H-5, H-6 and table XIX).	G	-	-	-	G	G
T	Unique Designation	A text amplifier that uniquely identifies a particular control measure symbol; target number. **Nuclear:** delivery unit (missile, aircraft, satellite, etc.)	30	30	30	30	30	30
V	Type	A text amplifier for equipment that indicates types of equipment or nuclear weapon type.	20	20	20		20	20
W[3]	Date/Time Group (DTG)	An alphanumeric designator for displaying a date-time group (DDHHMMSSZMONYYYY) or “O/O” for on order. The date-time group is composed of a group of six numeric digits with a time zone suffix and the standardized three-letter abbreviation for the month followed by four digits. The first pair of digits represents the day; the second pair, the hour; the third pair, the minutes. The last four digits after the month are the year. For automated systems, two digits may be added before the time zone suffix and after the minutes to designate seconds.	16	16	16	-	16	16
X	Altitude / Depth	A text amplifier that displays the minimum, maximum and/or specific altitude (in feet or meters in relation to a reference datum), flight level, or depth (for submerged objects in feet below sea level). See H.5.1.1.9 for content.	14	14	14	-	14	14
Y	Location	A text amplifier that displays a graphic’s location in degrees, minutes and seconds (or in UTM or other applicable display format).	19	19	19	19	19	19
AM	Distance	A numeric amplifier that displays a minimum, maximum, or a specific distance (range, radius, width, length, etc.), in meters.	6	6	6	-	-	-
AN	Azimuth	A numeric amplifier that displays an angle measured from true north to any other line in degrees.	3	3	3	-	-	-

Check the source to verify that this is the current version before use.

TABLE H-II. Amplifier descriptions and maximum lengths for control measure symbols - Continued.

FIELD ID	FIELD TITLE	DESCRIPTION	P[1]	L[1]	A[1]	BL[1]	B/C[1]	R/N[1]
AP	Target Designator	A six character text modifier used in Fire Support operations to uniquely designate targets in accordance with STANAG 2147, where characters 1 and 2 are alphabetic, and characters 3-6 are numeric: AANNNN.	6	6	6	-	-	-
AS	Country	Identifies the country of the organization being shown.	-	3	-	3	-	-

Notes: 1. Column headings: P = points, L = lines, A = areas, BL = boundary lines, R/N = radiological/nuclear, B/C = biological/chemical.
2. Numeric entry indicates text amplifier. "G" indicates graphic amplifier. A dash (-) inside boxes indicates non-applicable.
3. Field W: D = day, H = hour, M = minute, S = second, Z = time zone suffix, MON = month and Y = year.

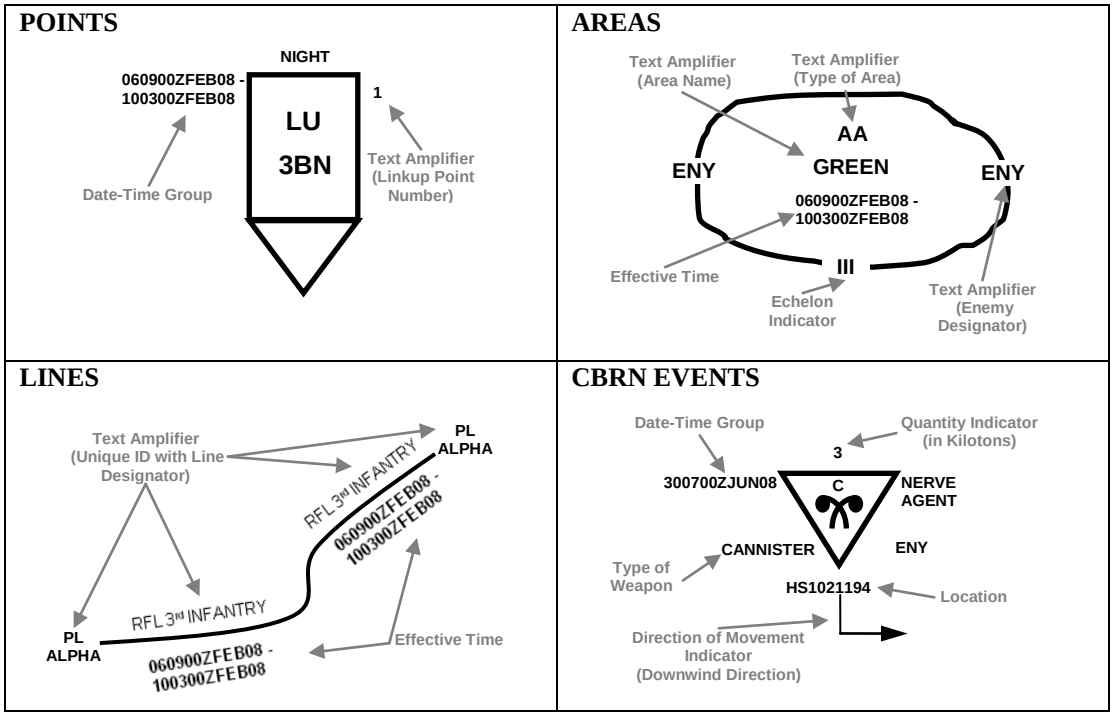

FIGURE H-2. Graphic amplifiers for control measure symbols.

H.5.1.1.5 Direction of movement indicator. The direction of movement indicator is an arrow identifying the direction of movement of events. The arrow extends downward from the center of the icon and points in the direction of movement. The indicator is represented in field Q as defined in table II and positioned as shown in table XIX.

H.5.1.1.6 Echelon indicator. The echelon indicator provides a graphic representation of command level and is used to show the element echelon on boundary lines, lines and areas. Echelon indicator codes are listed in table D-III of the land appendix. The indicator is represented in field B as defined in table H-II and positioned as shown in figure H-2 and figure H-6.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

H.5.1.1.7 Offset location indicator. The offset location indicator is used when placing an object away from its actual location. The indicator is a line extending downward from an appropriate anchor point on an icon. The actual location (field Y) is given in latitude and longitude. The indicator is represented in field **S** in table H-II and positioned as shown in figures H-2, H-3, H-4, H-5, H-6 and table H-XIX.

H.5.1.1.8 Text amplifier. Table H-II defines the specific content, length and type of each text amplifier. Additional information is contained in field H, with the content of this field being implementation specific, provided the maximum number of characters in each field is not exceeded.

H.5.1.1.9 Altitude/depth amplifier. This field may contain alternate value formats. Enter a description of the altitude/depth (X) using one of the following.

H.5.1.1.10 Altitude base reference point. Legal values are “GL” ground level and “MSL” mean sea level.

H.5.1.1.10.1 Relative altitude. The relative altitude is a composite field consisting of multiple parts, the numeric altitude, the altitude unit of measurement and the altitude vertical dimension. Legal values for the numeric altitude are (minus) -99999 through 99999 in increments of 1. Legal values for altitude units of measure is feet “FT,” meters “M,” kilometers “KM,” and statute miles “SM.” The legal value for the depth unit of measure is feet “FT.” Legal values for the vertical dimension are “AGL” above ground level, “AMSL” above mean sea level, “HAE” height above ellipsoid and “BMSL” below mean sea level. BMSL is used only for depth of submerged objects, reported in feet. A space may be added between the values in the field to make it easier to read.

Examples: 1250 FT AGL, 1000 FT AMSL, 1524 M HAE, 35760 FT BMSL.

H.5.1.1.10.2 Flight level. By definition, flight level (FL) is, “Surfaces of constant atmospheric pressure which are related to a specific pressure datum, 1013.2 mb (29.92 in) and are separated by specific pressure intervals. (Flight levels are expressed in three digits that represent hundreds of feet; e.g., flight level 250 represents a barometric altimeter indication of 25,000 feet and flight level 255 is an indication of 25,500 feet.).” The legal value for flight level indicator is “FL.” A space may be added between the values in the field to make it easier to read. The legal value for context quantity is 000-999, in increments of one.

Example: FL 290.

H.5.1.1.10.3 Multiple instances of altitude/depth amplifiers. When multiple instances of the “X” amplifier are present in a single instance of a symbol or graphic (ex., Minimum Altitude “X,” Maximum Altitude “X1”), for display purposes, the fields may be separated by a hyphen “-,” or a space, hyphen and space “ - .”

Examples:
500 FT AGL – 1250 FT AGL

25 FT AMSL – 150 FT AMSL

FL 250 – FL 290

MSL – 35760 FT BMSL

H.5.1.1.11 Date-time group. Date-time group (DTG) is defined as the date and time expressed in an alphanumeric combination. The alphanumeric combination used is day-time-time zone-month-year. The alphanumeric combination can be displayed in a number of ways. In its longest form, sixteen characters, it is composed of eight digits (first pair of digits denotes the date, second pair denotes the hours, third pair denotes the minutes and fourth pair denotes the seconds) followed by the time zone suffix, followed by a three-letter month abbreviation and four digits for the year: DDHHMMSSZMONYYYY. It can also be expressed in shorter forms by removing characters, such as DDHHMMZMONYY. On order (O/O) is a valid substitute for DTG.

H.5.2 Construction of control measure symbols. The rules for constructing control measure symbols vary depending on whether the object is point, line, or area based. The latter category of objects includes various forms of linear control measure symbols such as boundaries, areas of all shapes and sizes and complex figures such as an air corridor.

H.5.2.1 Point control measure symbols. A point-based control measure symbol, such as a casualty collection point, is constructed in the same manner as an unframed tactical symbol. Rules concerning the relative size of symbol components and placement of amplifiers in tactical symbols also apply to point based control measure symbols.

H.5.2.2 Line and area control measure symbols. A line or area control measure symbol is constructed using the anchor points, size and orientation defined for the control measure symbol. This appendix includes these parameters for the line and area graphics in the C2 domain. The size of the control measure symbol is determined by these parameters and the scale of the background on which the control measure symbols is placed. As a general rule, the line width and pattern height shall be scaled proportionally to the change in icon size required by its change in background scale (map or image). For control measure symbols, line width is dependent on the distance between the points to be depicted and may vary (i.e., be reduced or enlarged) as display scale changes.

H.5.3 Coloring. All friendly control measure symbols will be shown in black or blue when drawn manually or on a color computer-generated display. Hostile control measure symbols shall be shown in red. If red is not available, they will be drawn in black with the abbreviation “ENY” placed on the symbols in one place for single point symbols and at least two places for Area and Line symbols. All obstacles as shown in this appendix, friendly, hostile, neutral, unknown or factional, shall be drawn using the color green. If the color green is not available obstacles should be drawn using black. The color yellow will be used for the cross-hatching for CBRN contaminated areas. NOTE: The use of green and yellow for obstacles and CBRN is in contradiction to the standard identities.

H.5.4 Labeling. All text labeling shall be in upper case letters. The reader should be able to read the labels for all text labels of amplifier fields for control measures symbols when

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

the bottom of the overlay is closest to the reader. Labeling written on an angle should be readable to the viewer so they do not have to turn their head. Where space is limited within an area, the amplifying information may be shown in a stacked manner, rather than side by side as displayed in the templates.

H.5.4.1 Fonts. Font sizes shall be scaled as appropriate in order for the information to be readable to the viewer.

H.5.5 Command and Control. The exercise of authority and direction by a properly designated commander over assigned and attached forces in the accomplishment of the mission. Command and control functions are performed through an arrangement of personnel, equipment, communications, facilities, and procedures employed by a commander in planning, directing, coordinating, and controlling forces and operations in the accomplishment of the mission.

H.5.5.1 Boundaries. In land warfare, a boundary is a line by which areas of responsibility between adjacent units/formations are defined. For boundaries, all field labels are displayed perpendicular to the boundary line. Figure H-3 "Orientation of Boundary Lines" below provides the orientation of field labels for horizontal (east/west) and vertical (north/south) boundaries. The symbol for the highest echelon (Field B) unit on lateral boundaries is used for the boundary line. The graphic for the lower echelon (Field B) unit on a rear or forward boundary is used for the boundary line (see Table H-III) When units of the same echelon are adjacent to each other, the abbreviated unique designator (Field T) can be omitted from the alphanumeric designator. Tables H-XXIII and H-XXIV at the end of the appendix provide a list of abbreviations and acronyms to be used for Field T. For all boundaries, use Arabic numerals to show the numbers of units, except for a corps boundary, use Roman numerals to show the number of corps. When the boundary is between units of different countries, the country trigraph (Field AS) is shown in parenthesis behind or below the unit designation.

BOUNDARY TYPE	EXAMPLE Note: The symbols that have been colored grey are used to help explain how the control measure is used, but they are not a part of the control measure.
Rear Boundary Line that defines the rear area of operations assigned to a particular unit. The area behind the rear boundary belongs to the next higher commander and positioning of elements behind it must be coordinated with that commander.	
CONTROL MEASURE	TEMPLATE	DRAW RULES	EXAMPLE Note: The symbols that have been colored grey are used to help explain how the control measure is used, but they are not a part of the control measure.
Light Line Designated line forward of which vehicles are required to use black-out lights at night. Symbol Set Code: 25 Code: 11**02**00			
H.5.6 Points. In a number of tables (sustainment, CBRN decontamination and special C2) that follow there are single point control measure symbols that follow a specific format as shown in Figure H-4 below. Supply points follow this same format with a modification to the symbol. Supply points use the same icon used for supply units. The supply icon is placed toward the bottom of the box as shown in Figure H-4 below. This is format for use only with these types of points, as there are other points (contact, coordination, decision, targets, etc.) as displayed throughout this section on land control measure symbols that are formatted differently. In building points, the type of point is abbreviated and positioned inside the top part of the point symbol in field A. For supply symbols this may be a graphic depiction. In addition, below the abbreviation of the point name, the designation of the unit servicing that point may be included in field T1. To differentiate points, the point is numbered, lettered, or a combination. The

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

number, letter or combination is placed on the outside of the symbol on the right side at the top in field T. On the outside of the point on the left side at the top and middle, date-time groups can be associated with the point. On the outside of the point at the top, additional information can be provided in field H. Text will not be written on an angle for single point symbols. For dynamic displays, if the system has the capability to rotate the map display in the direction of movement, a single point symbol may optionally be rotated on its anchor point.

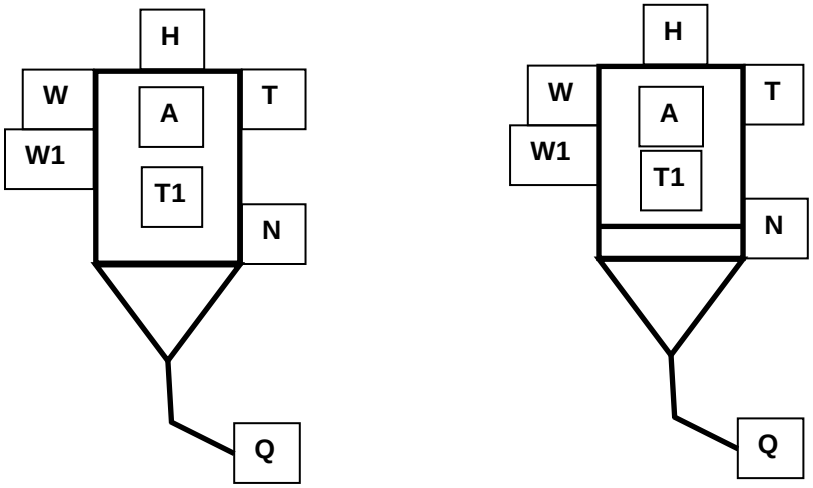

FIGURE H-4. Template for point (left) and supply point (right) control measure symbols.

H.5.7 Lines. In the tables that follow there are line control measure symbols that follow a specific format as shown in Figure H-5 below. Most lines are also named as a phase line for easy reference for use in orders and during transmissions. A phase line will be marked as PL with the name in the T field. Other lines that have a specific purpose and are also named as phase lines should have the primary purpose in the T1 field (such as restrictive fire line "RFL") labeled on top of the line at both ends of the line inside the lateral boundaries or as often as necessary for clarity. The T2 field is used for fire support coordination measures to show the designation of the controlling headquarters. The use of phase lines to mark line control measure symbols is not mandatory.

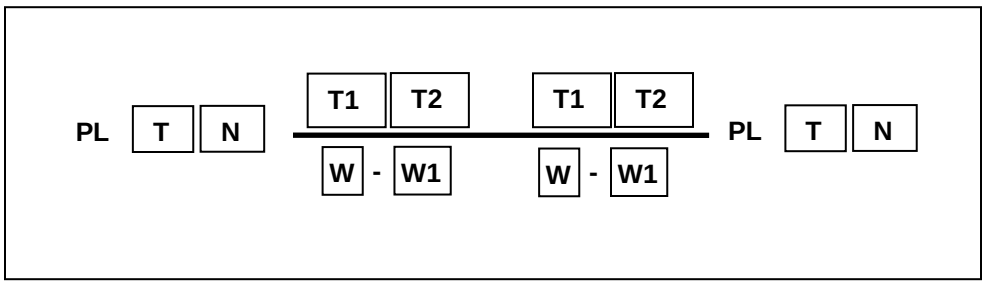

FIGURE H-5. Template for line control measure symbols.

H.5.8 Areas. In the tables that follow there are area control measure symbols that follow a specific format as shown in Figure H-6. Areas will normally be marked with the abbreviation for the type of area in the A field followed by a name in the T field. This labeling should be in

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z

the center of the area unless the area is too small or the labeling would interfere with the locating of units. Not all fields are required for each area; some areas may use only one field, while other will use several.

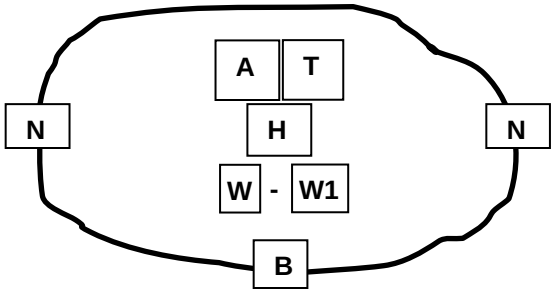

FIGURE H-6. Template for area control measure symbols.

H.5.9 Area of operations. An area of operations is an operational area defined by a joint commander for land or maritime forces to conduct military activities. Normally, an area of operations does not encompass the entire joint operations area of the joint commander, but is sufficient in size for the joint force component commander to accomplish assigned missions and protect forces. Operational area is an overarching term encompassing more descriptive terms for geographic areas in which military operations are conducted. Operational areas include, but are not limited to, such descriptors as area of responsibility, theatre of war, theatre of operations, joint operations area, amphibious objective area, joint special operations area and area of operations.

Contain Symbol Set Code: 25 Code: 1512**04** Static/Dynamic: D		Anchor Points. This symbol requires three anchor points. Points 1 and 2 define the endpoints of the semicircle's opening. Point 3 defines the end of the arrow. Size/Shape. Points 1 and 2 determine the diameter of the semicircle and point 3 determines the length of the arrow. The tip of the arrowhead will be at the center point of the semicircle's diameter and will project perpendicularly from the line between points 1 and 2. The default tic length should be the same as the text height of the echelon field (B). Spacing between the tics should also be the height of B. Users should be provided a facility to allow them to manually alter the height of B, which in turn should affect the tic length and spacing accordingly. Orientation. The opening typically faces enemy forces.

Retain Symbol Set Code: 25 Code: 1512**05** Static/Dynamic: D		Anchor Points. This symbol requires two anchor points. Point 1 defines the center point of the graphic and point 2 defines the graphic's start point and radius. Size/Shape. Points 1 and 2 will determine a radius that is long enough for the graphic to encompass the feature(s) being retained. The opening will be a 30-degree arc of the circle. The default tic length should be the same as the text height of the echelon field (R). Spacing between the tics should also be the height of R. Users should be provided a facility to allow them to manually alter the height of R, which in turn should affect the tic length and spacing accordingly. Orientation. The opening will be on the friendly side of the symbol.

Target Reference Point An easily recognizable point on the ground (either natural or manmade) used to initiate, distribute and control fires. Target reference points (TRPs) can also designate the center of an area where the commander plans to distribute or converge the fires of all his weapons rapidly. They are used by task force and below and can further delineate sectors of fire within an engagement area. TRPs are designated using the standard target symbol and numbers issued by the fire support officer. Once designated, TRPs also constitute indirect fire targets. Symbol Set Code: 25 Code: 16**03**00

H.5.15 Airspace Control Measures (Means).

H.5.15.1 Airspace control measures (means). Are control measures used by NATO to segregate, control and/or reserve airspace for allied operations. Airspace control means are used to enhance the effectiveness of accomplishing the joint force commander's objectives; to prevent mutual interference; to facilitate air defense identification; to prevent fratricide; and to help in safely accommodating the flow of all air traffic in the area of operations. In general terms, airspace control means can be broken down into the following groups: points, lines, air corridors and routes and areas.

TABLE H-XIII. Airspace control means.

CONTROL MEASURE	TEMPLATE	DRAW RULES	EXAMPLE Note: The symbols that have been colored grey are used to help explain how the control measure is used, but they are not a part of the control measure.
		Corridors (Areas)	
Airspace Control (Corridors) Areas Symbol Set Code: 25 Code: **17**0000	N/A		N/A
Air Corridor A restricted air route of travel specified for use by friendly aircraft and established for the purpose of preventing friendly aircraft from being fired on by friendly forces. Symbol Set Code: 25 Code: 17**01**00 Static/Dynamic: D		Anchor Points. This symbol may contain multiple segments. Each segment requires 2 anchor points. Point numbers that define the trace of the segment are sequential beginning with point 1, in increments of 1, up to a max of 99 points. Each anchor point defines the endpoint of a segment's centerline. The anchor points are Air Control Points (ACP), Communications Checkpoints	**NAME: GOLD** **WIDTH: 1200FT** **MIN ALT: 1500FT AGL** **MAX ALT: 20000FT AGL** **DTG START: 270600ZMAY08** **DTG END: 271845ZMAY08**

Lines			
Airspace Control Lines Symb ol Set Code: 25 Code: **19**0000	N/A		N/A
Identification, Friend-or-Foe (IFF) Off Line Line demarking where friendly aircraft en-route to targets stop emitting an IFF signal.(AJP-3.5.5) Symbol Set Code: 25 Code: 19**01**00		Anchor Points. This symbol requires at least two points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. The first and last anchor points determine the length of the line. The end-of line information will typically be posted at the ends of the line as it is displayed on the screen. Orientation. Orientation is determined by the order in which the anchor points are entered. Static/Dynamic: D	
Identification, Friend-or-Foe (IFF) On Line Line demarking where friendly aircraft returning to friendly territory start emitting an IFF signal. (AJP-3.5.5) Symbol Set Code: 25 Code: 19**02**00

H.5.16 Maritime control measures.

H.5.16.1 Maritime control measures. Are used by NATO to help the maritime component commander and his subordinate commanders to direct action by establishing responsibilities and to prevent ships, units, or aircraft from impeding one another and to impose necessary coordination. They aide the cooperation among forces without imposing needless restrictions on their freedom of action. In general terms, maritime control measures can be broken down into the following groups: points, lines and areas.

CONTROL MEASURE	TEMPLATE	DRAW RULES	EXAMPLE **Note**: The symbols that have been colored grey are used to help explain how the control measure is used, but they are not a part of the control measure.
Launch Area, Ellipse/Circle (AEGIS only) Symbol Set Code: 25 Code: 2001**01** Static/Dynamic: D **Note**: Launch Area may be depicted as orange (RGB: 255,155,0) where, the area fill is 75% transparent.		Anchor Points. This symbol requires one anchor point. This anchor point represents the center of an ellipse and, therefore, the geographic location of that ellipse. Size/Shape. The size and shape of this symbol is determined by three additional numeric values; A major axis radius, a minor axis radius, and a rotation angle. The radii should be expressed in the appropriate map distance units. Orientation. The orientation of this symbol is determined by the rotation angle provided, where 0 degrees is east/west and a positive rotation angle rotates the ellipse in a counter-clockwise direction.	 
Defended Area Symbol Set Code: 25 Code: 20**02**00	N/A		N/A

H.5.18 Fire Support Coordination Measures.

H.5.18.1 Fire Support Coordination Measures. Measures employed by land or amphibious commanders to facilitate the rapid engagement of targets and simultaneously provide safeguards for friendly forces. Fire support control measures should be labeled with the abbreviation of the control measure, the controlling headquarters (Field T) and the effective times (Field W/W1). For lines this labeling should be on both ends of the line and repeated as often as necessary for clarity along any line that passes through many boundaries.

CONTROL MEASURE	TEMPLATE	DRAW RULES	EXAMPLE Note: The symbols that have been colored grey are used to help explain how the control measure is used, but they are not a part of the control measure.
Weapon/Sensor Range fan, Circular Symbol Set Code: 25 Code: 24**21**00 Static/Dynamic: D	 The coordinate, which pinpoints the current physical location of a specific unit, weapon or acquisition system, may change with the movement of the object. The symbol for that object is located at the anchor point.	Anchor Points. This symbol requires one anchor point that defines an object at a dynamic grid location. Size/Shape. Shapes are concentric circles. Size is defined by the minimum and maximum ranges (as many as required) measured from the anchor point. All units in meters. Orientation. The center point is typically centered over the known location of a weapon or target acquisition system. The orientation of the Circular Range Fan is the direction of engagement. The orientation may change as the object moves or changes.

CONTROL MEASURE	TEMPLATE	DRAW RULES	EXAMPLE Note: The symbols that have been colored grey are used to help explain how the control measure is used, but they are not a part of the control measure.
Block An obstacle effect that integrates fire planning and obstacle effort to stop an attacker along a specific avenue of approach or to prevent him from passing through an engagement area. Symbol Set Code: 25 Code: 2705**01** Static/ Dynamic: D	 The horizontal line is the limit of the enemy advance. The vertical line indicates where obstacles tie in to terrain that is untrafficable.	Anchor Points. This symbol requires three anchor points. Points 1 and 2 define the endpoints of the symbol's vertical line. Point 3 defines the endpoint of the symbol's horizontal line. Size/Shape. Points 1 and 2 determine the length of the vertical line. The length of the horizontal line is determined by plotting point 3 on a plane extending perpendicularly from the midpoint of the vertical line. Orientation. The head of the "T" typically faces enemy forces.

TABLE H-XIX. Obstacle control measure symbols - Continued.

CONTROL MEASURE	TEMPLATE	DRAW RULES	EXAMPLE Note: The symbols that have been colored grey are used to help explain how the control measure is used, but they are not a part of the control measure.
Disrupt An obstacle effect that focuses fire planning and obstacle effort to cause the enemy to break up his formation and tempo, interrupt his timetable, commit breaching assets prematurely and attack in a piecemeal effort. Symbol Set Code: 25 Code: 2705**02** Static/ Dynamic: D	 Short arrow indicates where enemy is disrupted by obstacles. Longer arrows indicate where movement is allowed and enemy is attacked by fires.	Anchor Points: This symbol requires three anchor points. Points 1 and 2 define the end points of the symbol's vertical line. Point 3 defines the tip of the longest arrow. Size/Shape: Points 1 and 2 determine the height of the symbol and point 3 determines its length. The spacing between the symbol's arrows will stay proportional to the symbol's vertical line. The length of the short arrows will remain in proportion to the length of the longest arrow. Orientation: The arrows point away from enemy forces.

CONTROL MEASURE	TEMPLATE	DRAW RULES	EXAMPLE Note: The symbols that have been colored grey are used to help explain how the control measure is used, but they are not a part of the control measure.
Fix An obstacle effect that focuses fire planning and obstacle effort to slow an attacker's movement within a specified area, normally an engagement area. Symbol Set Code: 25 Code: 270503 Static/ Dynamic: D	 **Note**: From the tip of the arrow to the back of the irregular part of the symbol indicates where enemy advance is slowed by obstacles.	Anchor Points: This symbol requires 2 anchor points. Point 1 defines the tip of the arrowhead and point 2 defines the rear of the symbol. Size/Shape: Points 1 and 2 determine the length of the symbol, which varies only in length. Orientation: The orientation is determined by the anchor points.

CONTROL MEASURE	TEMPLATE	DRAW RULES	EXAMPLE Note: The symbols that have been colored grey are used to help explain how the control measure is used, but they are not a part of the control measure.
Turn An obstacle effect that integrates fire planning and obstacle effort to drive an enemy formation from one avenue of approach to an adjacent avenue of approach or into an engagement area. Symbol Set Code: 25 Code: 2705**04** Static/ Dynamic: D	 **Note**: Direction of the arrow indicates the desired direction of turn.	Anchor Points: This symbol requires two anchor points. Point 1 defines the rear of the symbol. Point 2 defines the tip of the arrowhead. Point 3 defines the 90 degree arc. Size/Shape: Points 1 and 2 are connected by a 90 degree arc. Point 3 indicates on which side of the line the arc is placed. Orientation: The rear of the symbol identifies the enemy's location and the arrow points in the direction the obstacle should force the enemy to turn.	Obstacle Bypass Symbol Set Code: 25 Code: 27**06**00	N/A		N/A

CONTROL MEASURE	TEMPLATE	DRAW RULES	EXAMPLE Note: The symbols that have been colored grey are used to help explain how the control measure is used, but they are not a part of the control measure.
Obstacle Line A conceptual control measure used at battalion or brigade level to show placement intent without specifying a particular type of linear obstacle. Symbol Set Code: 25 Code: 29**01**00 Static/ Dynamic: D		Anchor Points. This symbol requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. The first and last anchor points determine the length of the line. Orientation. Orientation is determined by the order in which the anchor points are entered.	
Antitank Obstacles A ditch which is impassable to vehicles unaided. It may be prepared using machinery or explosives. Symbol Set Code: 25 Code: 29**02**00	N/A		N/A

H.5.25 Supply points.

H.5.25.1 Supply point. Any point where supplies are issued in detail. Supply points follow the format as shown above with a modification to the symbol. As with the symbol for supply units, there is an additional line placed toward the bottom of the box. In building points, the name/type of the point is abbreviated and positioned inside the top part of the point symbol in field "A". For some supply symbols this may be a symbol icon. STANAG 2961 provides comparison charts for NATO and NATO nation classes of supply.

TABLE H-XXIII. Supply point control measure symbols.

H.5.28 Abbreviations and Acronyms for Use with Control Measure Symbols.

H.5.28.1 Boundary abbreviations and acronyms. Table H-XXIII below provides a list of abbreviations and acronyms for echelons and functional organizations to be used with boundaries.

TABLE H-XXVI. Abbreviations and acronyms for use with boundaries.

ECHELON	ABBREVIATION /ACRONYM	EXAMPLES Note: Any Unit identification can be followed by a 3 letter country code in parenthesis.
Army Group	AG (AAP-15)	1AG
Army	A (AAP-15)	3A
Corps	Does not require an abbreviation. Corps is the only echelon to use Roman numerals.	II
Marine Expeditionary Force	MEF (AAP-15)	III MEF (Use Roman numerals)
Marine Air-Ground Task Force	MAGTF (AAP-15)	4MAGTF
Division	DIV (AAP-15)	1DIV
Air Assault Division	AAD	101AAD
Airborne Division	ABD (AAP-15)	6ABD
Armored Division	AD (AAP-15)	2AD
Cavalry Division	CD	1CD
Infantry Division	ID (AAP-15)	52ID
Marine Division	MARD	1MARD
Mechanized Division	MD (AAP-15)	4MD
Mountain Division	MTND	10MTND
Multinational Division	MND (AAP-15)	1MND or MND(S).
Note: Multinational divisions may use geographical references in parenthesis		
Brigade	BDE (AAP-15)	2BDE
Air Assault Brigade	AAB (AAP-15)	8AAB
Airborne Brigade	ABB (AAP-15)	3ABB
Marine Expeditionary Brigade	MEB (AAP-15)	6MEB
Multinational Brigade	MNB (AAP-15)	2MNB
Naval Infantry Brigade	NIB (AAP-15)	4NIB
Regiment	REGT (AAP-15)	21REGT
Airborne Regiment	ABR (AAP-15)	901ABR
Marine Expeditionary Unit	MEU (AAP-15)	3MEU
Group	GP	41GP
Battle Group	BG (AAP-15)	5BG
Battalion	BN (AAP-15)	7BN
Company	COY (AAP-15)	ACOY or 2COY
Platoon	PLT	2PLT
Team	TM	BTM

APPENDIX I - METEOROLOGICAL AND OCEANOGRAPHIC SYMBOLOGY

I.1 SCOPE

I.1.1 Scope. This appendix addresses control measure symbols in the meteorological and oceanographic (METOC) domain. Although the symbology in this domain is outside the configuration management of the Symbology Standards Management Committee (SSMC), it is beneficial to present the information to users of this standard as a separate appendix. This appendix has been coordinated and approved by the joint METOC community and is a mandatory part of this standard. The information contained herein is intended for compliance.

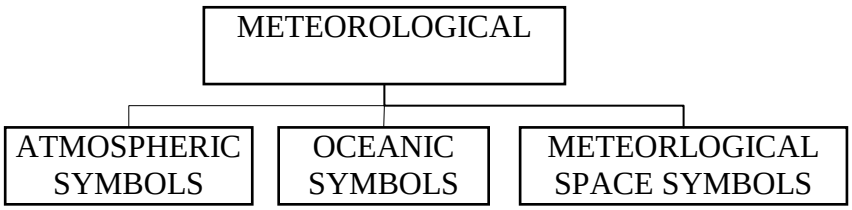

FIGURE I-1. Meteorological and oceanographic appendix sections

I.2 APPLICABLE DOCUMENTS

Specific documents in 2.2 of this standard apply to this appendix.

I.3 DEFINITIONS

The definitions in section 3 of this standard apply to this appendix.

I.4 GENERAL REQUIREMENTS

I.4.1 Organization. This appendix contains technical specifications, a symbol coding scheme, a symbology hierarchy and METOC symbology.

I.5 DETAILED REQUIREMENTS

I.5.1 Technical specifications. Composition, construction and display of symbols are explained in the detailed requirements section of the standard.

I.5.2 Symbology identification coding scheme. A symbol identification code (SIDC) is a numeric string that may be used to provide the unique identifier necessary to display or exchange symbol information between MIL-STD-2525 compliant systems. Refer to Appendix A for SIDC positions and descriptions.

I.5.3 Symbology set. The following graphics are some of those more commonly used to depict weather and should only be used on weather-related displays. These graphics must be implemented as a separate layer or classification since they may conflict with other symbols or icons used in the warrior icon set. These graphics are based on approved symbols and icons from the World Meteorological Organization (WMO).

TABLE I-I. Atmospheric icons.

DESCRIPTION	ICON	DRAW RULES
PRESSURE SYSTEMS Static/Dynamic: N/A Symbol Set Code: 45 Code: **11**0000	N/A	N/A
PRESSURE SYSTEMS **LOW PRESSURE CENTER** Static/Dynamic: D Symbol Set Code: 45 Code: 11**01**00 Color: Red (RGB 255,0,0)		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is typically centered over the represented pressure center. **Note:** The graphic is a letter 'L' with a dynamic tag 'P' below it that represents the lowest atmospheric pressure of the system. The value is three or 4 digits and represents the pressure in hectoPascals (millibars). The value below, 998, represents 998 hectoPascals. A value above 1000 HectoPascals would be reflected in 4 digits like 1008 hectoPascals.
PRESSURE SYSTEMS LOW PRESSURE CENTER **CYCLONE CENTER** Static/Dynamic: S Symbol Set Code: 45 Code: 1101**01** Color: Red (RGB 255,0,0)		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is typically centered over the represented pressure center. **Note:** The graphic is a letter 'C' that represents the atmospheric circulation center of the system.

TABLE I-I. Atmospheric icons - Continued.

DESCRIPTION	ICON	DRAW RULES
PRESSURE SYSTEMS LOW PRESSURE CENTER **TROPOPAUSE LOW** Static/Dynamic: D Symbol Set Code: 45 Code: 1101**02** Color: Black		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is typically centered over the represented pressure center. **Note:** The center of the graphic is the pressure center. The low point of the tropopause topography is indicated by the letter 'L' and the height (H in 3 digits) above mean sea level in hundreds of feet (or meters) is included within the graphic
PRESSURE SYSTEMS **HIGH PRESSURE CENTER** Static/Dynamic: D Symbol Set Code: 45 Code: 11**02**00 Color: Blue (RGB 0,0,255)		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is typically centered over the represented pressure center. **Note:** The graphic is a letter 'H' with a dynamic tag 'P' below it that represents the highest atmospheric pressure of the system. The value is three or four digits and represents the pressure in hectoPascals (millibars). The value below, 1016, represents 1016 hectoPascals. A value below 1000 HectoPascals would be reflected in three digits like 998 hectoPascals.
PRESSURE SYSTEMS HIGH PRESSURE CENTER **ANTICYCLONE CENTER** Static/Dynamic: S Symbol Set Code: 45 Code: 1102**01** Color: Blue (RGB 0,0,255)		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is typically centered over the represented pressure center **Note:** The graphic is a letter 'A' that represents the atmospheric circulation center of the system. .

TABLE I-I. Atmospheric icons - Continued.

DESCRIPTION	ICON	DRAW RULES
PRESSURE SYSTEMS HIGH PRESSURE CENTER **TROPOPAUSE HIGH** Static/Dynamic: D Symbol Set Code: 45 Code: 1102**02** Color: Black		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is typically centered over the represented pressure center. **Note:** The center of the graphic is the pressure center. The high point of the tropopause topography is indicated by the letter 'H' and the height (X in 3 digits) above mean sea level in hundreds of feet (or meters) is included within the graphic.
PRESSURE SYSTEMS **FRONTAL SYSTEMS** Static/Dynamic: N/A Symbol Set Code: 45 Code: 11**03**00	N/A	**Note:** For special lines that are not symmetrical, such as Fronts, the sequence of anchor points determines the proper alignment of the line. For two anchor points that describe the position of the front or a section of the front, with L (for left point) and R (for right point): (1) If R comes before L in sequence, the front is rendered in the way shown, (2) If L comes before R in sequence, the front is rendered in the reverse with pips shown facing the opposite direction.).
PRESSURE SYSTEMS FRONTAL SYSTEMS **COLD FRONT** Static/Dynamic: D Symbol Set Code: 45 Code: 1103**01** Color: Blue (RGB 0,0,255)		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable/Curve. The points are typically connected with a curved line with solid, triangular pips spaced evenly along the line. The curvature of the line is operator defined. Orientation. The first and last anchor points determine the length of the line. The line should be drawn from the pressure center to the extent of the front. The pips will be evenly spaced.

DESCRIPTION	ICON	DRAW RULES
PRESSURE SYSTEMS FRONTAL SYSTEMS OCCLUDED FRONT **UPPER OCCLUDED FRONT** Static/Dynamic: D Symbol Set Code: 45 Code: 1103**10** Color: Purple (RGB 111,49,152)		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable/Curve. The points are typically connected with a curved line with alternating hollow, triangular and half-circle pips spaced evenly along the line. The curvature of the line is operator defined. Orientation. The first and last anchor points determine the length of the line. The line should be drawn from the pressure center to the extent of the front. The pips will be evenly spaced along the line. Pips point in the direction the front is moving.
PRESSURE SYSTEMS FRONTAL SYSTEMS OCCLUDED FRONT **OCCLUDED FRONTOLYSIS** Static/Dynamic: D Symbol Set Code: 45 Code: 1103**11** Color: Purple (RGB 111,49,152)		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable/Curve. The points are typically connected with a curved line with alternating solid, triangular and half-circle pips spaced evenly along the line separated by a crossed line. The curvature of the line is operator defined. Orientation. The first and last anchor points determine the length of the line. The line should be drawn from the pressure center to the extent of the front. The pips will be evenly spaced along the line. Pips point in the direction the front is moving. **Note:** Frontolysis is the process where a frontal system is dissipating/weakening.

DESCRIPTION	ICON	DRAW RULES
PRESSURE SYSTEMS FRONTAL SYSTEMS **STATIONARY FRONT** Static/Dynamic: D Symbol Set Code: 45 Code: 1103**12** Color: Alternate Red (RGB 255,0,0) & Blue (RGB 0,0,255)		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable/Curve. The points are typically connected with a curved line with solid, triangular and half-circle pips spaced evenly on alternating sides of the line. The curvature of the line is operator defined. Orientation. The first and last anchor points determine the length of the line. The line should be drawn from the pressure center to the extent of the front. The pips will be evenly spaced. Since the front is not moving, pips alternate with warm (red) pointing one direction (normally to left or up) and the cold (blue) pointing the other (normally right or down).
PRESSURE SYSTEMS FRONTAL SYSTEMS STATIONARY FRONT **UPPER STATIONARY FRONT** Static/Dynamic: D Symbol Set Code: 45 Code: 1103**13** Color: Alternate Red (RGB 255,0,0) & Blue (RGB 0,0,255)		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable/Curve. The points are typically connected with a curved line with hollow, triangular and half-circle pips spaced evenly on alternating sides of the line. The curvature of the line is operator defined. Orientation. The first and last anchor points determine the length of the line. The line should be drawn from the pressure center to the extent of the front. The pips will be evenly spaced along the line. Since the front is not moving, pips alternate with warm (red) pointing one direction (normally to left or up) and the cold (blue) pointing the other (normally right or down).

DESCRIPTION	ICON	DRAW RULES
PRESSURE SYSTEMS FRONTAL SYSTEMS STATIONARY FRONT **STATIONARY FRONTOGENESIS** Static/Dynamic: D Symbol Set Code: 45 Code: 1103**14** Color: Alternate Red (RGB 255,0,0) & Blue (RGB 0,0,255)		Size/Shape. Scalable/Curve. The points are typically connected with a curved line with solid, triangular and half-circle pips spaced evenly on alternating sides of the line separated by one dot. The curvature of the line is operator defined. Orientation. The first and last anchor points determine the length of the line. The line should be drawn from the pressure center to the extent of the front. The pips will be evenly spaced along the line. Since the front is not moving, pips alternate with warm (red) pointing one direction (normally to left or up) and the cold (blue) pointing the other (normally right or down).
PRESSURE SYSTEMS FRONTAL SYSTEMS STATIONARY FRONT **STATIONARY FRONTOLYSIS** Static/Dynamic: D Symbol Set Code: 45 Code: 1103**15** Color: Alternate Red (RGB 255,0,0) & Blue (RGB 0,0,255)		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable/Curve. The points are typically connected with a curved line with solid, triangular and half-circle pips spaced evenly on alternating sides of the line separated by a crossed line. The curvature of the line is operator defined. Orientation. The first and last anchor points determine the length of the line. The line should be drawn from the pressure center to the extent of the front. The pips will be evenly spaced. Since the front is not moving, pips alternate with warm (red) pointing one direction (normally to left or up) and the cold (blue) pointing the other (normally right or down)..
PRESSURE SYSTEMS **LINES** Static/Dynamic: N/A Symbol Set Code: 45 Code: 11**04**00	N/A

TABLE I-I. Atmospheric icons - Continued.

DESCRIPTION	ICON	DRAW RULES
PRESSURE SYSTEMS LINES **TROUGH AXIS** Static/Dynamic: D Symbol Set Code: 45 Code: 1104**01** Color: Black		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable/Curve. The points are typically connected with a dashed curved line. The curvature of the line is operator defined. Orientation. The first and last anchor points determine the length of the line. The line should be drawn along the trough axis. **Note:** This is a surface feature.
PRESSURE SYSTEMS LINES **UPPER TROUGH AXIS** Static/Dynamic: D Symbol Set Code: 45 Code: 1104**02** Color: Black		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable/Curve. The points are typically connected with a solid curved line. The curvature of the line is operator defined Orientation. The first and last anchor points determine the length of the line. The line should be drawn along the trough axis.
PRESSURE SYSTEMS LINES **RIDGE AXIS** Static/Dynamic: D Symbol Set Code: 45 Code: 1104**03** Color: Black		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable/Curve. The points are typically connected with a solid zigzag line. The zigzag of the line is operator defined. Orientation. The first and last anchor points determine the length of the line. The line should be drawn along the ridge axis. The zigzag of the line will be placed at regular intervals along the entire length of the line.

DESCRIPTION	ICON	DRAW RULES
PRESSURE SYSTEMS LINES **SEVERE SQUALL LINE** Static/Dynamic: D Symbol Set Code: 45 Code: 1104**04** Color: Black		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable/Curve. The points are typically connected with a straight line consisting of a short line section and an alternating V shape. The curvature and amplitude of the waves of the line are operator defined. Orientation. The first and last anchor points determine the length of the line. The line should be drawn so the "V" shapes are facing in the direction of movement. The "V" shapes and short line segment will alternate along the line. **Note:** This line type is rarely seen, but may appear in products from the Canadian meteorological service (Meteorological Services of Canada). The term “severe squall line” is generally implied by “squall line”
PRESSURE SYSTEMS LINES **INSTABILITY LINE** Static/Dynamic: D Symbol Set Code: 45 Code: 1104**05** Color: Black		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable/Curve. The points are typically connected with a straight line consisting of a short line section and alternating two dots. The curvature and amplitude of the waves of the line are operator defined. Orientation. The first and last anchor points determine the length of the line. The two dots and the short line segment will alternate along the line.

TABLE I-I. Atmospheric icons - Continued.

DESCRIPTION	ICON	DRAW RULES
PRESSURE SYSTEMS LINES **SHEAR LINE** Static/Dynamic: D Symbol Set Code: 45 Code: 1104**06** Color: Black		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable/Curve. The points are typically connected with a curved/wavy line consisting of a short line and one dot. The curvature and amplitude of the waves of the line are operator defined. Orientation. The first and last anchor points determine the length of the line. The dot and the short line segment will alternate along the line. **Note:** A shear line is normally the convergent easterly winds where a cold front has intruded into a tropical region.
PRESSURE SYSTEMS LINES **INTER-TROPICAL CONVERGANCE ZONE** Static/Dynamic: D Symbol Set Code: 45 Code: 1104**07** Color: Orange (RGB 255,128,0)		Anchor Points. This graphic requires at least three anchor points to define the boundary of the area. Add as many points as necessary to accurately reflect the area's size and shape. Size/Shape. Determined by the anchor points. Orientation. The first and last anchor points determine the length of the line. The dual line segments will be parallel to slightly wider at the western end.. **Note**: The operator should place the modifier(s) to indicate areas of weather activity within the graphic. The Inter-Tropical Convergence Zone (ITCZ) is a region where the northeasterly and southeasterly trade winds converge.

TABLE I-I. Atmospheric icons - Continued.

DESCRIPTION	ICON	DRAW RULES
PRESSURE SYSTEMS LINES **CONVERGANCE LINE** Static/Dynamic: D Symbol Set Code: 45 Code: 1104**08** Color: Orange (RGB 255,128,0)		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable/Curve. The points are typically connected with a solid straight line with alternating slanted lines connected as depicted in the example to indicate convergence. Orientation. The first and last anchor points determine the length of the line. The alternating slanted lines will be evenly spaced along the line. Orientation is determined by the anchor points.
PRESSURE SYSTEMS LINES **INTER-TROPICAL DISCONTINUITY** Static/Dynamic: D Symbol Set Code: 45 Code: 1104**09** Color: : Alternate Red (RGB 255,0,0) and Green (RGB 13,223,39)		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable/Curve. The points are typically connected with a dashed straight or curved line. The curvature of the line is operator defined. Orientation. The first and last anchor points determine the length of the line. The red and green line segments will alternate along the line. Orientation is determined by the anchor points.
PRESSURE SYSTEMS **PRESSURE TENDENCY** Static/Dynamic: D Symbol Set Code: 45 Code: 11**05**00	N/A	**Note**: Each symbol within the pressure tendency group is static, but only one can be applied to a particular station plot, dependent upon the pressure tendency at that location. As such, the group of symbols is dynamic.

TABLE I-I. Atmospheric icons - Continued.

DESCRIPTION	ICON	DRAW RULES
PRESSURE SYSTEMS PRESSURE TENDENCY **RISE THEN FALL HIGHER** Static/Dynamic: D Symbol Set Code: 45 Code: 1105**01** Color: Black / Blue (RGB 0,0,255)		Anchor Points: This graphic requires one anchor point. The center point defines the geometric center of the graphic. Size/Shape: Scalable. Orientation: The graphic is centered over the anchor location. **Note:** Pressure tendency symbols are depicted to the right of the plot circle just after the text value for the actual pressure change. Pressure tendency is displayed in two digits in black immediately to right of the plot circle followed by the pressure tendency symbol.
PRESSURE SYSTEMS PRESSURE TENDENCY **RISE THEN STEADY** Static/Dynamic: D Symbol Set Code: 45 Code: 1105**02** Color: Black / Blue (RGB 0,0,255)		Anchor Points: This graphic requires one anchor point. The center point defines the geometric center of the graphic. Size/Shape: Scalable. Orientation: The graphic is centered over the anchor location. **Note:** Pressure tendency symbols are depicted to the right of the plot circle just after the text value for the actual pressure change. Pressure tendency is displayed in two digits in black immediately to right of the plot circle followed by the pressure tendency symbol.

DESCRIPTION	ICON	DRAW RULES
WINDS **WIND PLOT** Static/Dynamic: D Symbol Set Code: 45 Code: 14**02**00 Color: Black	Image 1  Image 2  Image 3  Image 4  Image 5 	Anchor Points. This graphic requires a minimum of two anchor points. The first point defines the location of the plot circle. Additional points define the wind shaft and the speed of the wind. Wind speed is depicted on the shaft using a combination of the shaft alone (1-2 knots), half barbs (5 knots), barbs (10 knots) and pennants (50 knots). Wind speeds 5 knots or greater are rounded to the nearest 5 knots. Missing wind speed is depicted by an "X" at the end of the wind shaft. Winds with missing direction are not displayed. Size/Shape. Not applicable. Orientation. The shaft of the graphic is oriented with reference to true north in the direction from which the wind is blowing to the nearest 10 degrees. The barbs and pennants lie back from the shaft at an angle of 120 degrees and are oriented to the left of the shaft in the Northern Hemisphere and to the right in the Southern Hemisphere. The graphic is operator-centered over the desired location. **Note**: Cloud coverage is typically depicted in the plot circle in accordance with cloud coverage graphics. The wind speed, direction and cloud coverage depicted in wind plot graphics are example only. Image 1: From 270 degrees at 1-2 knots Image 2: From 270 degrees at 5 knots Image 3: From 250 degrees at 10 knots Image 4: From 110 degrees at 25 knots Image 5: From 250 degrees at 50 knots

DESCRIPTION	ICON	DRAW RULES
	Image 6 	Image 6: From 270 degrees with missing wind speed
WINDS **JET STREAM** Static/Dynamic: D Symbol Set Code: 45 Code: 14**03**00 Color: Red or Black		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable/Curve. Orientation. The first and last anchor points determine the length of the line. The arrowheads will be evenly spaced along the line.
WINDS **STREAM LINE** Static/Dynamic: D Symbol Set Code: 45 Code: 14**04**00 Color: Operator Defined		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable/Curve. Orientation. The first and last anchor points determine the length of the line. The arrowheads will be evenly spaced along the line.
CLOUD COVERAGE Static/Dynamic: N/A Symbol Set Code: 45 Code: **15**0000	N/A	N/A
CLOUD COVERAGE **CLOUD COVERAGE SYMBOLS** Static/Dynamic: N/A Symbol Set Code: 45 Code: 15**01**00	N/A	N/A

DESCRIPTION	ICON	DRAW RULES
CLOUD COVERAGE CLOUD COVERAGE SYMBOLS **CLEAR SKY** Static/Dynamic: D Symbol Set Code: 45 Code: 1501**01** Color: Black		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is centered over the location of the reported cloud cover.
CLOUD COVERAGE CLOUD COVERAGE SYMBOLS **FEW COVERAGE** Static/Dynamic: D Symbol Set Code: 45 Code: 1501**02** Color: Black		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is centered over the location of the reported cloud cover.
CLOUD COVERAGE CLOUD COVERAGE SYMBOLS **SCATTERED COVERAGE** Static/Dynamic: D Symbol Set Code: 45 Code: 1501**03** Color: Black		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is centered over the location of the reported cloud cover.
CLOUD COVERAGE CLOUD COVERAGE SYMBOLS **BROKEN COVERAGE** Static/Dynamic: D Symbol Set Code: 45 Code: 1501**04** Color: Black		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is centered over the location of the reported cloud cover.

DESCRIPTION	ICON	DRAW RULES
CLOUD COVERAGE CLOUD COVERAGE SYMBOLS **OVERCAST COVERAGE** Static/Dynamic: D Symbol Set Code: 45 Code: 1501**05** Color: Black		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is centered over the location of the reported cloud cover.
CLOUD COVERAGE CLOUD COVERAGE SYMBOLS **SKY TOTALLY OR PARTIALLY OBSCURED** Static/Dynamic: D Symbol Set Code: 45 Code: 1501**06** Color: Black		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is centered over the location of the reported cloud cover.
WEATHER SYMBOLS Static/Dynamic: S Symbol Set Code: 45 Code: **16**0000	N/A	
WEATHER SYMBOLS **RAIN** Static/Dynamic: S Symbol Set Code: 45 Code: 16**01**00	N/A	
WEATHER SYMBOLS RAIN **INTERMITTENT LIGHT** Static/Dynamic: S Symbol Set Code: 45 Code: 1601**01** Color: Green		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is centered over the location of the reported conditions.

DESCRIPTION	ICON	DRAW RULES
WEATHER SYMBOLS RAIN INTERMITTENT LIGHT **CONTINUOUS LIGHT** Static/Dynamic: S Symbol Set Code: 45 Code: 1601**02** Color: Green		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is centered over the location of the reported conditions.
WEATHER SYMBOLS RAIN **INTERMITTENT MODERATE** Static/Dynamic: S Symbol Set Code: 45 Code: 1601**03** Color: Green		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is centered over the location of the reported conditions.
WEATHER SYMBOLS RAIN **INTERMITTENT MODERATE/CONTINUOUS MODERATE** Static/Dynamic: S Symbol Set Code: 45 Code: 1601**04** Color: Green		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is centered over the location of the reported conditions.
WEATHER SYMBOLS RAIN **INTERMITTENT HEAVY** Static/Dynamic: S Symbol Set Code: 45 Code: 1601**05** Color: Green		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is centered over the location of the reported conditions.

TABLE I-II. Oceanographic icons - Continued.

DESCRIPTION	ICON	DRAW RULES
ICE SYSTEMS LIMITS **LIMIT OF VISUAL OBSERVATION** Static/Dynamic: D Symbol Set Code: 46 Code: 1105**01** Color: Black		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable/Curve. Orientation. The first and last anchor points determine the length of the line. The ovals will be repeated the entire length of the line.
ICE SYSTEMS LIMITS **LIMIT OF UNDERCAST** Static/Dynamic: D Symbol Set Code: 46 Code: 1105**02** Color: Black		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable/Curve. The points are typically connected with a series of wave-like shapes. Orientation. The first and last anchor points determine the length of the line. The wave-like shapes will be repeated the entire length of the line.
ICE SYSTEMS LIMITS **LIMIT OF RADAR OBSERVATION** Static/Dynamic: D Symbol Set Code: 46 Code: 1105**03** Color: Black		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable/Curve. The points are typically connected with a solid curved line. The curvature of the line is operator defined. Orientation. The first and last anchor points determine the length of the line. The ovals and ’s will alternate the entire length of the line.

DESCRIPTION	ICON	DRAW RULES
HYDROGRAPHY AIDS TO NAVIGATION **LIGHT** Static/Dynamic: S Symbol Set Code: 46 Code: 120406 Color: Magenta flare		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is typically centered over the desired location.
HYDROGRAPHY AIDS TO NAVIGATION **LEADING LINE** Static/Dynamic: D Symbol Set Code: 46 Code: 120407 Color: Black solid to dashed line		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable. Orientation. The first and last anchor points determine the length of the line.
HYDROGRAPHY AIDS TO NAVIGATION **LIGHT VESSEL/LIGHT SHIP** Static/Dynamic: S Symbol Set Code: 46 Code: 120408 Color: Black light vessel		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is typically centered over the desired location.
HYDROGRAPHY AIDS TO NAVIGATION **LIGHTHOUSE** Static/Dynamic: S Symbol Set Code: 46 Code: 120409 Color: Black lighthouse symbol		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is typically centered over the desired location.

DESCRIPTION	ICON	DRAW RULES
HYDROGRAPHY **DANGERS/HAZARDS** Static/Dynamic: N/A Symbol Set Code: 46 Code: 12**05**00	N/A	N/A
HYDROGRAPHY DANGERS/HAZARDS **ROCK SUBMERGED** Static/Dynamic: S Symbol Set Code: 46 Code: 1205**01** Color: Blue/Black Black cross in blue solid circle w/ black dotted outline		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is typically centered over the desired location.
HYDROGRAPHY DANGERS/HAZARDS **ROCK AWASHED** Static/Dynamic: S Symbol Set Code: 46 Code: 1205**02** Color: Black 6 point asterisk		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is typically centered over the desired location.
HYDROGRAPHY DANGERS/HAZARDS **UNDERWATER DANGER/HAZARD** Static/Dynamic: D Symbol Set Code: 46 Code: 1205**03** Color: Blue/Black Blue fill w/ black dot outline		Anchor Points. This graphic requires at least three anchor points to define the boundary of the area. Add as many points as necessary to accurately reflect the area's size and shape. Size/Shape. Determined by the anchor points. Orientation. Not applicable.

DESCRIPTION	ICON	DRAW RULES
HYDROGRAPHY DANGERS/HAZARDS **FOUL GROUND - POINT** Static/Dynamic: S Symbol Set Code: 46 Code: 1205**04** Color: Gray Gray pound (#) symbol		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is typically centered over the desired location.
HYDROGRAPHY DANGERS/HAZARDS **FOUL GROUND - AREA** Static/Dynamic: D Symbol Set Code: 46 Code: 1205**05** Color: Gray Gray # offset pattern fill		Anchor Points. This graphic requires at least three anchor points to define the boundary of the area. Add as many points as necessary to accurately reflect the area's size and shape. Size/Shape. Determined by the anchor points. Orientation. Not applicable.
HYDROGRAPHY DANGERS/HAZARDS **KELP/SEAWEED - POINT** Static/Dynamic: D Symbol Set Code: 46 Code: 1205**06** Color: Gray kelp symbol		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is typically centered over the desired location.
HYDROGRAPHY DANGERS/HAZARDS **KELP/SEAWEED - AREA** Static/Dynamic: D Symbol Set Code: 46 Code: 1205**07** Color: Gray kelp symbol pattern fill		Anchor Points. This graphic requires at least three anchor points to define the boundary of the area. Add as many points as necessary to accurately reflect the area's size and shape. Size/Shape. Determined by the anchor points. Orientation. Not applicable.

DESCRIPTION	ICON	DRAW RULES
HYDROGRAPHY DANGERS/HAZARDS **SNAGS/STUMPS** Static/Dynamic: S Symbol Set Code: 46 Code: 1205**08** Color: Blue/Black Blue oval w/ black dotted outline		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is typically centered over the desired location.
HYDROGRAPHY DANGERS/HAZARDS **WRECK (UNCOVERS)** Static/Dynamic: S Symbol Set Code: 46 Code: 1205**09** Color: Grey wreck symbol		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is typically centered over the desired location.
HYDROGRAPHY DANGERS/HAZARDS **WRECK (SUBMERGED)** Static/Dynamic: S Symbol Set Code: 46 Code: 1205**10** Color: Blue/Black Black horizontal bar w/ 3 ticks in blue solid oval w/ black dotted outline		Anchor Points. This graphic requires one anchor point. The center point defines the center of the graphic. Size/Shape. Scalable. Orientation. The graphic is typically centered over the desired location.
HYDROGRAPHY DANGERS/HAZARDS **BREAKERS** Static/Dynamic: D Symbol Set Code: 46 Code: 1205**11** Color: Gray thin dashed line		Anchor Points. This graphic requires at least two anchor points, points 1 and 2, to define the line. Additional points can be defined to extend the line. Size/Shape. Scalable/Curve. Orientation. The first and last anchor points determine the length of the line.

APPENDIX J - SIGNALS INTELLIGENCE SYMBOLS

J.1 SCOPE

J.1.1 Scope. This appendix addresses symbols that support signals intelligence (SIGINT) in the C2 domain. The tables in this appendix present the icons and modifiers for the SIGINT domain. This appendix is a mandatory part of the standard. The information contained herein is intended for compliance.

J.2 APPLICABLE DOCUMENTS

Specific documents in 2.2 of this standard apply to this appendix.

J.3 DEFINITIONS

The definitions in section 3 of this standard apply to this appendix.

J.4 GENERAL REQUIREMENTS

J.4.1 Organization. This appendix contains technical specifications, a symbol coding scheme, a symbology hierarchy and SIGINT symbology.

J.5 DETAILED REQUIREMENTS

J.5.1 Technical specifications. Composition, construction and display of symbols are explained in the detailed requirements section of the standard.

J.5.2 Symbol identification coding scheme. A symbol identification code (SIDC) is a numeric string that may be used to provide the unique identifier necessary to display or exchange symbol information between MIL-STD-2525 compliant systems. Refer to Appendix A for SIDC positions and descriptions.

J.5.3 Composition of SIGINT symbols. A standard method for constructing symbols is presented. Refer to 5.3.8 for an explanation of symbol composition. Figure J-1 shows an example of a SIGINT symbol.

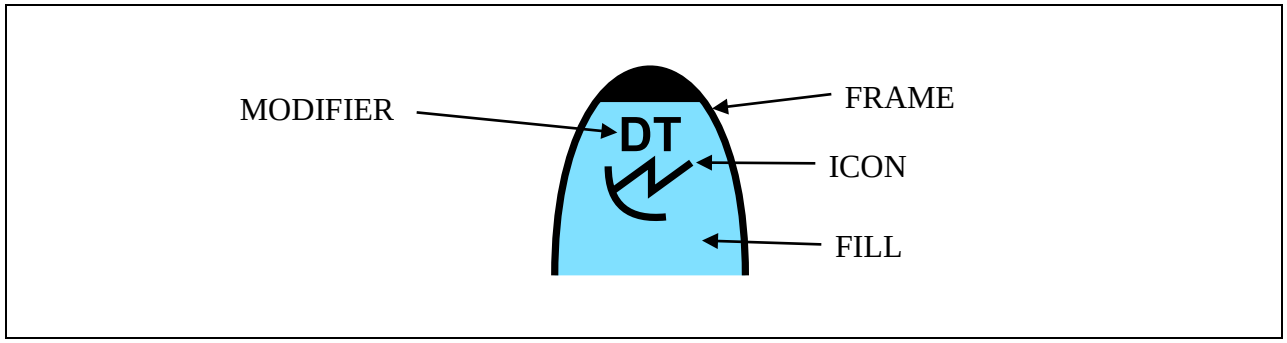

FIGURE J-1. Signals intelligence symbol components.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

J.5.3.1 Symbol building process. Table J-1 depicts the symbol building process for SIGINT symbols. The process is identical for icons and modifiers requiring the vertical bounding octagon.

TABLE J-I. Signal intelligences symbol building process.

STEP	DESCRIPTION	EXAMPLE
1.	Choose the frame that matches the standard identity of the object from the appropriate dimension column in tables I, II, or III. In this example, the standard identity is friend and the dimension is space. The example depicts a “friendly space track.”	2.	Choose an icon for the main sector of the bounding octagon. In this example, the icon is “radar,” a SIGINT entity type. The example depicts a “friendly space radar.”	3.	If required, choose a modifier to depict an additional characteristic of the icon. In this example, the modifier is “data transmission,” a sector 1 modifier. The example depicts a “friendly space radar with data transmission capability.” **Note**: There are no sector 2 modifiers in SIGINT symbols.	4.	The finished symbol will appear as shown in the example.	
J.5.3.2 Icons and modifiers. All icons shall be placed within the main sector of the bounding octagon (see table J-I). When depicted, modifiers shall be placed in sector 1 as appropriate (see table J-I). There are no sector 2 modifiers in SIGINT. Only one modifier may be placed in each sector at a given time. Multiple modifiers in the same position are prohibited due to legibility concerns.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

J.5.3.3 Amplifiers. The display of additional alphanumerical and graphical information on identity, movement and location and capabilities of a SIGINT symbol is dependent on the dimension of that symbol. A SIGINT symbol may be in the space, air, land, sea surface, or subsurface dimension. For example, if the SIGINT symbol is in the space dimension, then that symbol shall follow the amplifier requirements as stated in the space appendix. See 5.1.6 for more information on amplifiers.

J.6 SIGINT SYMBOLS

J.6.1 SIGINT symbols. This section includes the lists of icons and modifiers for building SIGINT symbols.

J.6.2 SIGINT icons. Table J-II depicts SIGINT icons.

TABLE J-II. Signals intelligence icons.

DESCRIPTION	ICON	REMARKS
SIGNAL INTERCEPT Type: Entity Symbol Set Code: 50, 51, 52, 53, 54 Code: **11**0000 Icon Type: Full Octagon	N/A	There is no icon associated with this entity.
COMMUNICATIONS Type: Entity Type Entity: SIGNAL INTERCEPT Symbol Set Code: 50, 51, 52, 53, 54 Code: 11**01**00 Icon Type: Main		N/A
JAMMER Type: Entity Type Entity: SIGNAL INTERCEPT Symbol Set Code: 50, 51, 52, 53, 54 Code: 11**02**00 Icon Type: Main		N/A
RADAR Type: Entity Type Entity: SIGNAL INTERCEPT Symbol Set Code: 50, 51, 52, 53, 54 Code: 11**03**00 Icon Type: Main		N/A

J.6.3 SIGINT sector 1 modifiers. SIGINT sector 1 modifiers denote communications and radar categories based on dimension (for example, space, air, land, sea surface, or subsurface). Table J-III lists SIGINT sector 1 modifiers and illustrates their placement within the bounding octagon.

TABLE J-III. Signals intelligence sector 1 modifiers.

DESCRIPTION	CATEGORY	MODIFIER	REMARKS
ANTI-AIRCRAFT FIRE CONTROL Symbol Set Code: 52,53 Code: 01	LAND/SEA SURFACE RADAR		N/A

APPENDIX K - USE OF WARFIGHTING SYMBOLS IN PSEUDO-THREE-DIMENSIONAL (2.5D) DISPLAYS

K.1 SCOPE

K.1.1 Scope. This appendix provides definitions and guidelines for display of Common Warfighting Symbology in pseudo-three-dimensional displays, also known as 2.5D displays. In the context of this appendix, 2.5D display refers to the presentation of information that gives the perception of depth or varying distance, as in a non-orthogonal viewing angle. In other words, a viewing angle that is not perpendicular to the surface of the Earth. This is in contrast to several other emerging graphic technologies that will allow for viewing in stereographic or full three-dimensional display. In stereo display, dual images are used to recreate a three-dimensional perception in the human brain.

a. Although there is some discussion of the use of 2.5D symbols, the primary focus of this appendix is the display of the two-dimensional symbols contained in MIL-STD-2525 in a 2.5D display of the surrounding environment. Modeling and simulation standards and methods of portrayal would be more suitable for the display of 2.5D or full three-dimensional symbols and models.

b. This appendix is not a mandatory part of the standard. It is intended for guidance only.

K.2 REFERENCES

This section is not applicable to this standard.

K.3 DEFINITIONS

K.3.1 Billboarding: A method for portraying a symbol in a 2.5D display in which the symbol is perpendicular to the viewing angle.

K.3.2 Cubing: A method for portraying a symbol in a 2.5D display in which the symbol is overlaid on a cube to present a surface visible from the viewing angle.

K.3.3 Curve (line): One-dimensional geometric primitive representing the continuous image of a line.

K.3.4 Geospatial: Pertaining to the geographic location and characteristics of natural or constructed features and boundaries on, above, or below the Earth's surface; especially referring to data that is geographic and spatial in nature.

K.3.5 Glyph: A symbol (as a curved arrow on a road sign) that conveys information nonverbally.

K.3.6 Icon: A sign (as a word or graphic symbol) whose form suggests its meaning.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

K.3.7 Image: The optical counterpart of an object produced by an optical device (as a lens or mirror) or an electronic.

K.3.8 Marker post (lollipop): A method for portraying a symbol in a 2.5D display in which the symbol is billboarded but also raised above or below the terrain surface by a vertical line.

K.3.9 Model: A miniature representation or simulation.

K.3.10 Pictograph: A picture representing a word or idea; a hieroglyph.

K.3.11 Point: Zero-dimensional geometric primitive, representing a position.

K.3.12 Solid (volume): Three-dimensional geometric primitive, representing the continuous image of a region of Euclidean three space.

K.3.13 Surface (area): Two-dimensional geometric primitive locally representing a continuous image of a region of a plane.

K.3.14 Symbicon: A hybrid of a symbol and icon which attempts to combine the best identification performance benefits of each representation.

K.3.15 Symbol: An object that presents information (MIL-STD-2525). An arbitrary or conventional sign used in writing or printing relating to a particular field to represent operations, quantities, elements, relations, or qualities.

K.3.16 Terrain draping: A method for portraying a symbol in a 2.5D display in which the symbol is overlaid on a terrain surface.

K.3.17 Three-dimensional: Giving the illusion of depth or varying distances.

K.3.18 Two-dimensional: Lacking depth of characterization.

K.4 PSEUDO-THREE-DIMENSIONAL (2.5D) SYMBOLIZATION

K.4.1 Introduction. Symbols are used to convey information about objects in space. In most traditional command and control applications, this has been accomplished by an orthogonal (directly overhead) view, such as when looking at a map. Command and control symbols have been overlaid on top of geospatial information or a “map background” to provide a geospatial context to locate the military object of interest at a geographic position. Attributes of the object are visually encoded in the symbol to communicate information about the object to the observer.

a. As command and control symbology has evolved from hand-annotated paper maps to automated computer display screens, views other than orthogonal have become practical. Non-overhead views or dynamic viewing positions such as “fly-through” displays provide new ways in which a warfighter can better perceive and understand the operational environment.

Check the source to verify that this is the current version before use.

b. This appendix establishes some basic terminology for addressing portrayal of information in 2.5D displays and provides advantages, disadvantages and guidance on some of these methods of display. Although some aspects of 2.5D symbols are discussed, the primary focus of this appendix is on portrayal of the two-dimensional symbols contained in MIL-STD-2525 in a 2.5D display. The modeling and simulation (M&S) community has been portraying the environment in 2.5D for a long time and there are M&S standards and symbol libraries available for 2.5D symbology (see section K.5.2).

c. This appendix is not intended to be a "standard" as such. New developments in the information technology, computer graphics and the geospatial information systems (GIS) and modeling and simulation industries will undoubtedly eclipse the information provided here.

K.4.2 When to use 2.5D displays. The paramount point when considering the use of 2.5D displays is to recognize that a 2.5D display is not necessarily better than a two-dimensional display for every application. A 2.5D display may look neat and impress a viewing audience, but it must really be evaluated as to whether it presents information better or not as good as a traditional two-dimensional display. Research indicates that using 2.5D displays provide advantages such as –

a. Provide a visual representation that may be useful in understanding the shape or rough spatial layout of scenes

b. May be more intuitive and natural for use

c. Are preferred by users

d. May present clearer picture of tactical information (eliminate need to search text boxes for attributes such as altitude and to do mental integration of information from different views). These benefits may also be engineered into 2D displays as well.[1]

Conversely, 2.5D displays have several disadvantages as well:

a. Are prone to distortion (due to association with parameters of perspective)

b. Are prone to clutter (less display area near horizon, so more objects are packed into a smaller area; addition of depth cues such as drop lines increase number of objects displayed)

c. Are poor for tasks requiring precision, both about objects (e.g. realistic icons do not scale well; distant objects may be too small to recognize) and distances and angles (from foreshortening and inadequate and conflicting depth cues.

Research is mixed concerning performance benefits of using 2D or 2.5D displays largely due to the great variety of factors considered in the studies. Also, users may prefer (or rate highly) displays that actually hinder rather than enhance their performance.[2]

K.4.3 Taxonomy of symbols and displays. Symbols can be classified many different ways, including subject area, data structure and visual aspects. A basic taxonomy might look something like this:

K.4.3.1 Subject Area.

a. Operational symbols – military operations and control measures

b. Geospatial symbols – provides geospatial context (map background)

K.4.3.2 Delineation Type.

a. Point – one coordinate point

b. Line – a series of coordinate points

c. Area – a series of coordinate points in which the line creates a polygon

d. Volume – a polygon or shape with a vertical component

K.4.3.3 Degree of Abstraction.

a. Abstract symbol – a symbol representing an object based on learned association

b. Pictograph or icon – a symbol representing an object based on the symbol looking like the object

c. Symbicon – a hybrid of a symbol and an icon which attempts to combine the best identification performance benefits of each representation.

d. Two-dimensional image – a picture of the object based on varying intensity of reflected energy from the object

e. Pseudo-three-dimensional model – a physical or digital representation of an object

K.4.3.4 Dimensionality.

a. Two-dimensional – a symbol lacking depth of characterization

b. Pseudo-three-dimensional (2.5D) – a symbol giving the illusion of depth or varying distances

c. Three-dimensional – a symbol displayed by stereoscopic, holographic or other means that provides a complete representation of three dimensions.

Check the source to verify that this is the current version before use.

K.4.3.5 Relative to terrain.

a. Ground clamped – symbol is shown on terrain

b. Elevated – symbol is raised above terrain surface

K.4.4 Geospatial (map) symbols. Geospatial symbology generally follows the “earth surface” and can be draped over elevation data. Typically, operational symbols are shown on a map background to provide a positional reference. Digital geospatial information can be classified into two types.

K.4.4.1 Raster data. Raster data is a method of representing geospatial data characterized by a matrix of evenly spaced rows and columns of data points. These data points (called "pixels" in image and scanned map data) typically represent some value at that point, while the position within the columns and rows determines the geographic position. Raster data structures are typically used to record scanned maps and charts (MC&G graphic data), image data, or gridded data, such as terrain elevation posts in an elevation model.

K.4.4.2 Vector data. Vector data represents each cartographic feature by an entity description (feature code) and a spatial extent (geographic position). Geographic position may be two-dimensional (horizontal position only) or three-dimensional (including elevation). Features are categorized as point, line, or area features. The position of a point feature is described by a single coordinate pair (or triplet for three dimensional data). The spatial extent of a line feature is described by a string of coordinates of points lying along the line, while the extent of an area feature is described by treating its boundary as a line feature. Vector data may be stored in a sequential, chain node, or topological data structure.

K.4.5 Imagery. By its nature, imagery is not symbolized but instead relies on variations in intensity of captured light (or other portion of spectrum or other phenomena) to create a visual picture of the object or phenomena being represented. Imagery can be used as a background display or the picture of an object or piece of equipment.

a. There is a significant difference between raster geospatial data or an image and vector geospatial data. In vector data, geographic features can be filtered or turned on or off in a vector display. In a raster display, the map or image content is fixed and you see whatever was shown on the scanned paper map or image.

K.4.6 Optimum display method. Each type of symbolization has advantages and disadvantages. There is no one right answer. The intended application will determine which method best meets the intended use of the display.

K.5 GUIDANCE AND PORTRAYAL CONSIDERATIONS IN PSEUDO-THREE-DIMENSIONAL (2.5D) DISPLAYS

K.5.1 Use of 2D symbols in 2.5D display. The symbols provided in the appendices of MIL-STD-2525 were designed for two-dimensional display. They can be used in a 2.5D display, using various visualization techniques, some of which are described below. The visualizations described here are not intended to be an all-encompassing or comprehensive list but merely some

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

of the more common approaches. The intent of this appendix is to provide guidance to implementers on some of the advantages and disadvantages of these visualization techniques.

K.5.1.1 Visualization of icons. The symbols in the various appendices of MIL-STD-2525 for space, air, land, maritime (surface and subsurface), meteorology, signals intelligence, etc., symbolize units, equipment and installations as point symbols. Each is associated with a single geographic coordinate. The following paragraphs describe several methods of symbolizing point icons.

K.5.1.1.1 Terrain draping. One simple method of displaying two-dimensional symbols in a 2.5D display is to simply place the 2D symbols over the 2.5D surface model (see figure K-1). This makes it appear as if operational symbols were large flags laid out on the ground. With draping, no changes to existing 2D symbols are required. Since the viewing angle is not perpendicular, symbols may be distorted in shape. Depending on the underlying terrain, some symbols may be obscured by higher terrain in between the symbol and the viewing position.

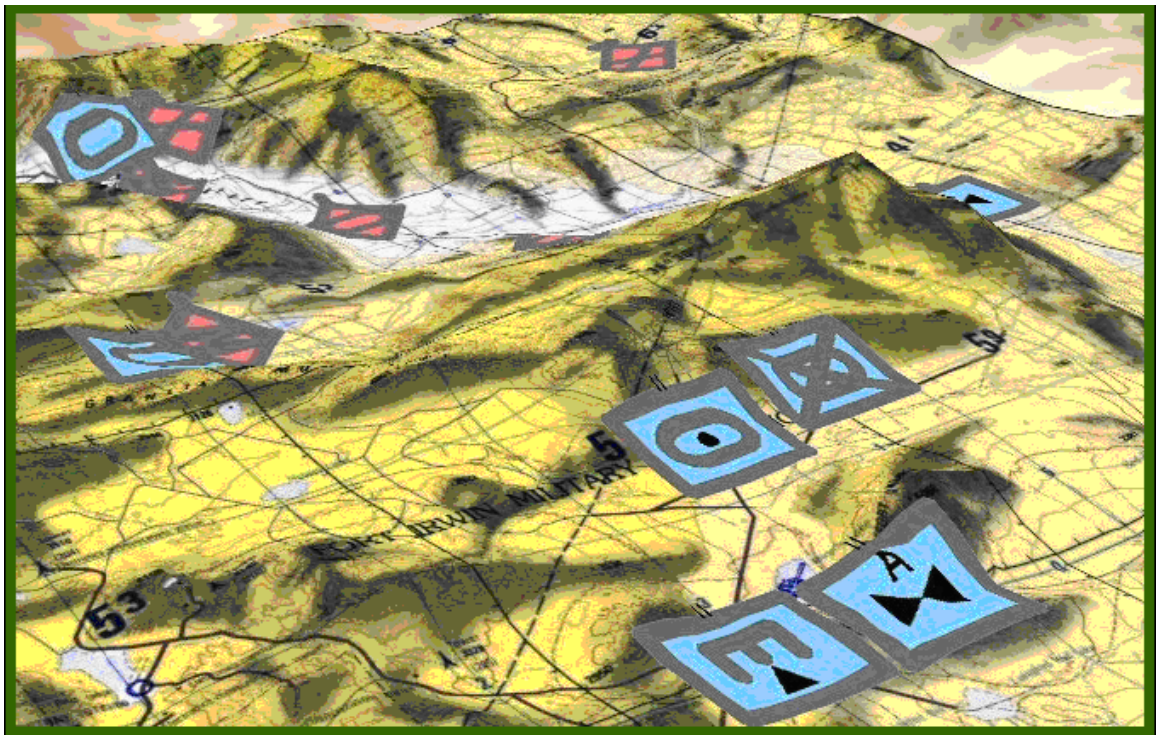

FIGURE K-1. Example of terrain draping of icons.
(Static MOLE layer displayed in ArcGlobe)

K.5.1.1.2 Billboarding. Billboarding is a technique in which a two-dimensional symbol is positioned vertically or perpendicular to the view angle (see figure K-2). This makes symbols easier to see than if they were draped over the terrain but is much more computationally demanding, sometimes affecting system performance. Although used in systems, the performance benefits of billboarding have not been validated with performance data. There are several factors that must be considered when orienting the billboard as well. Symbols placed on

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

the ground have to be elevated enough so the entire symbol is visible. If the center of the symbol was co-located with the position on the ground surface, the bottom half of the symbol would be obscured. Billboarding is conceptually different from lollipopping. In fact most billboard displays are raised above ground level. Billboarding refers to placing the 2D symbol perpendicular to view angle, while lollipopping or using a marker post refers to elevating the symbol above or below the terrain surface.

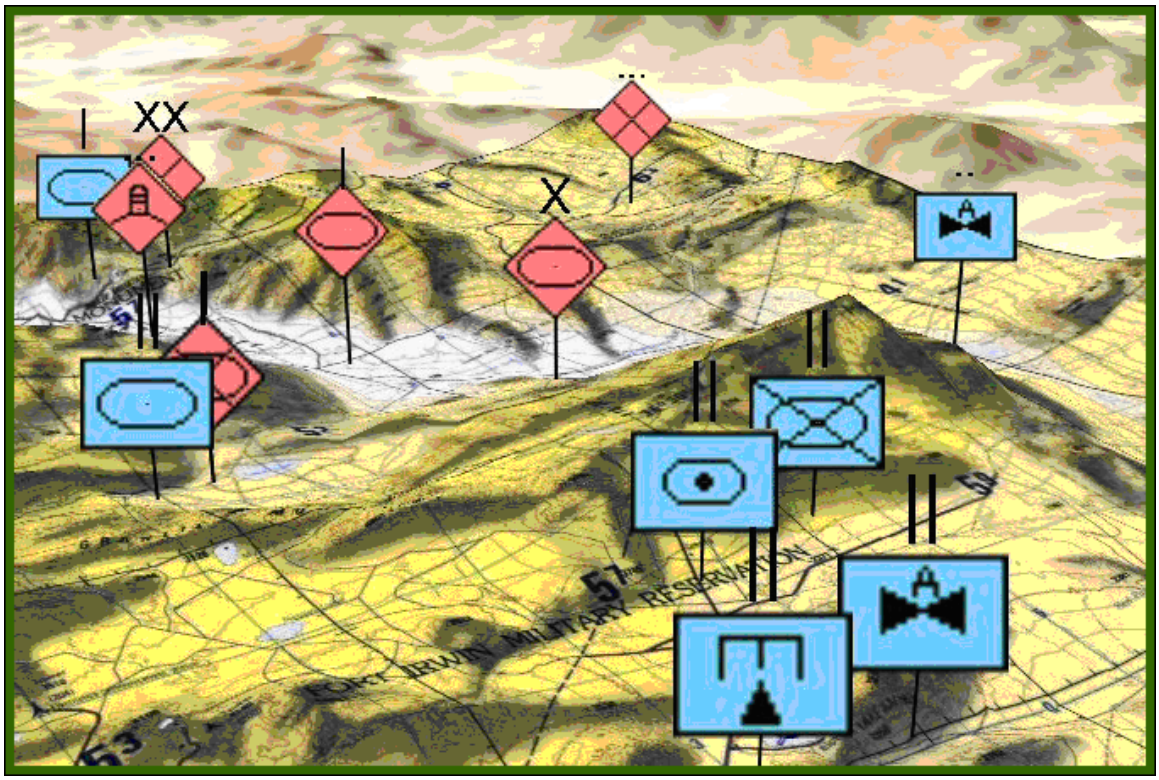

FIGURE K-2. Example of billboarding of icons. (TOC 3D display)

K.5.1.1.3 Cubing. An alternative to billboarding is to project the 2D symbol onto a 2.5D shape, such as a cube (see figure K-3). As with billboarding, cubes can also be elevated above the terrain surface.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

FIGURE K-3. Example of cubing of icons.

K.5.1.1.4 Marker post. In many cases, billboarded or cubed symbols are raised above the ground surface using a marker post, a technique sometimes called “lollipopping” (see figure K-4). The user can set an arbitrary height above ground surface and drop down lines connect the symbol to its ground location. In a 2.5D display, tracks that are actually above or below ground or water surface can be portrayed in their actual location. Lollipopping has the potential to create confusion with the actual altitude of an above or below-ground/water track. For example, it might appear that a helicopter is flying underneath a tank. Care must also be taken to distinguish between symbols raised to an arbitrary height above or below terrain and those symbols showing an actual altitude/depth, if both types are used in the same display.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

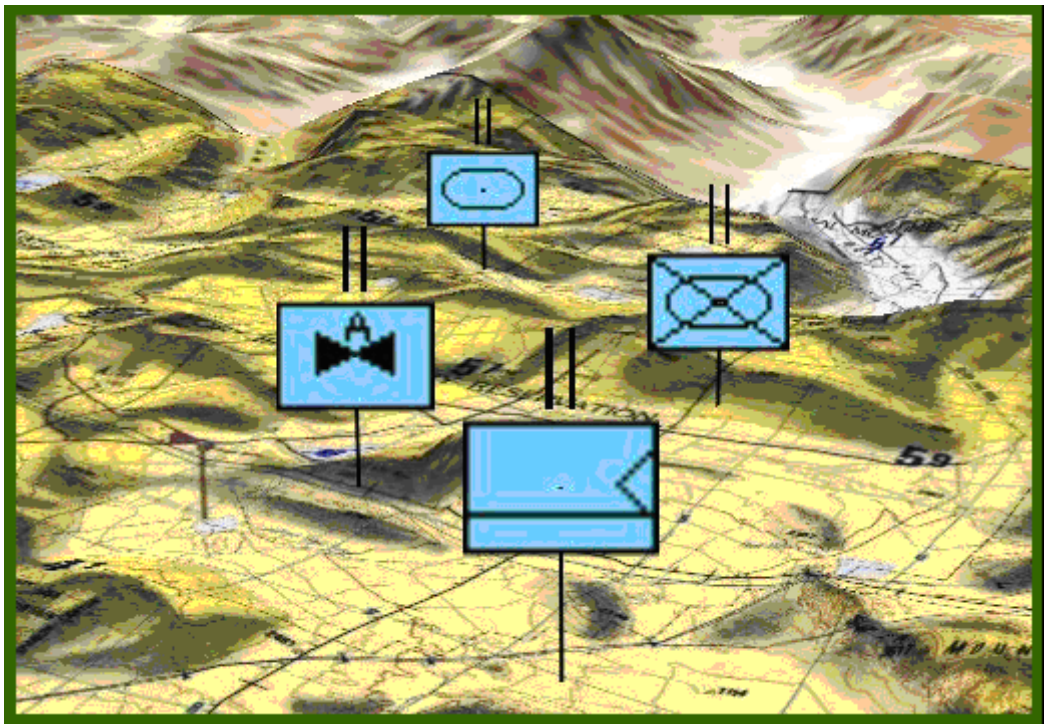

FIGURE K-4. Example of marker posts.
(TOC 3D display)

K.5.1.2 Visualization of control measure symbols. The control measure symbols in MIL-STD-2525 are more complex than the simple icons in appendix A and contain point, line and area symbols. The techniques for portrayal of line and area symbols are generally similar to the point symbols. Lines may be “draped” over the terrain; but, as with points, draping creates the potential for a symbol to be obscured by intervening terrain (see figure K-5). Line symbols can be extruded above the terrain for visual emphasis, forming what appear to be walls on the terrain surface
(see figure K-6). These walls could be used as a background for presenting additional information, such as echelon, status, etc.

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

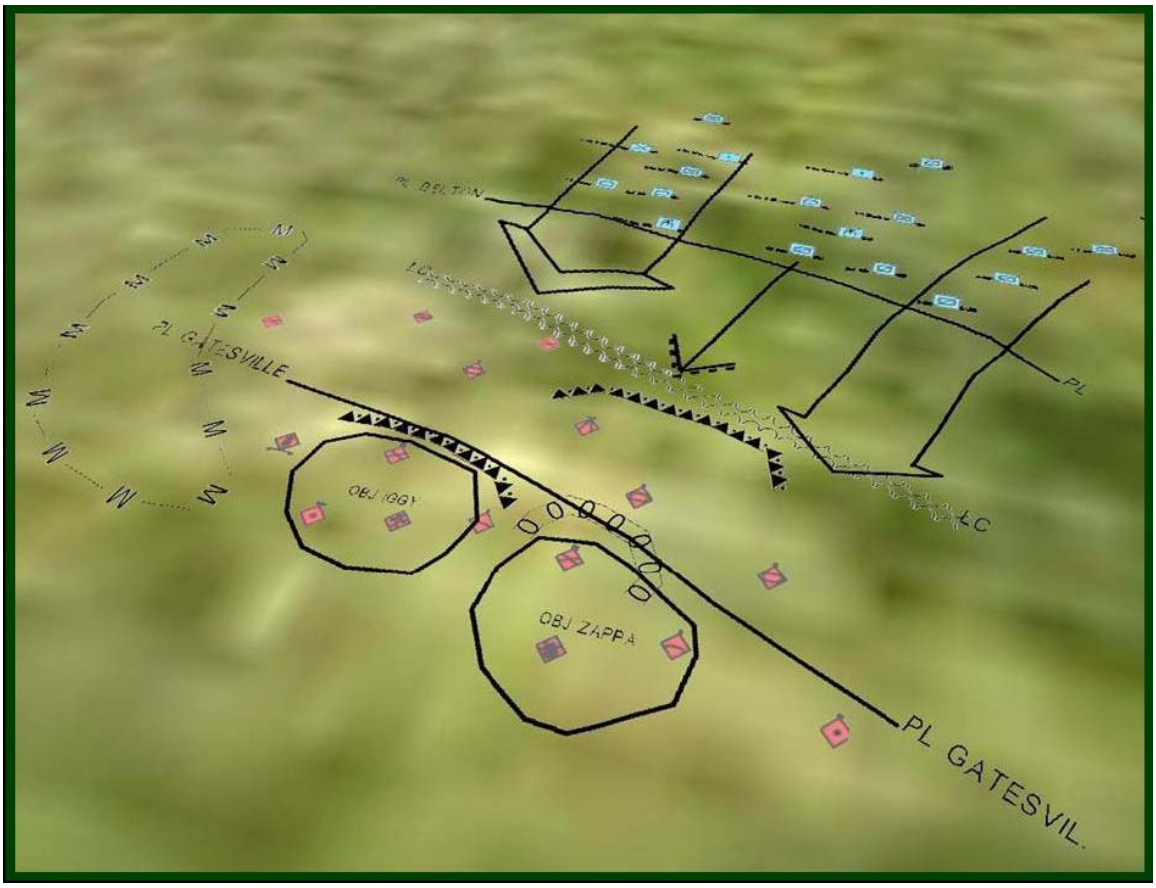

FIGURE K-5. Example of draped control measure symbols symbols. (MOLE in ArcGlobe)

Check the source to verify that this is the current version before use.

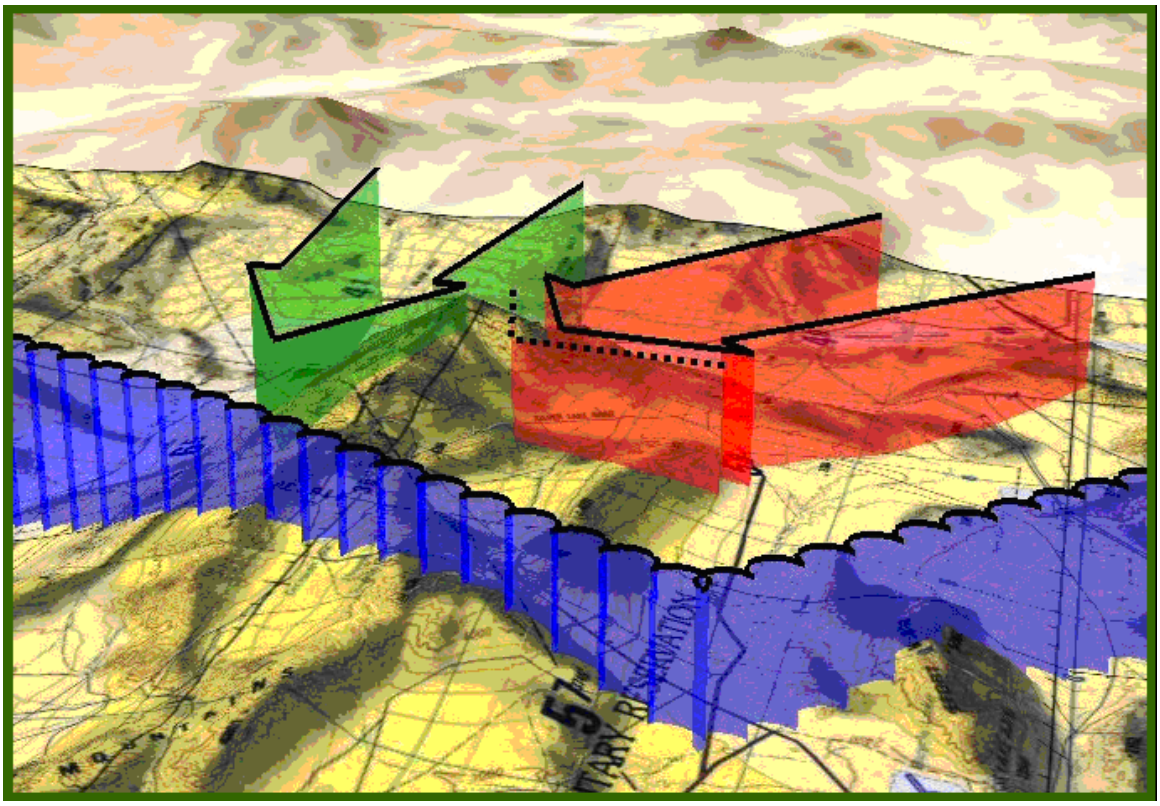

FIGURE K-6. Example of extruded control measure symbols symbols. (TOC 3D display)

K.5.1.3 Symbicon. A symbicon is a hybrid of an abstract symbol with a pictograph or icon that increases the ease of identifying an object[3] (see figure K-7). A typical symbicon may combine the identification code of a symbol, for example "B" for bomber, with the stylized silhouette of an aircraft.

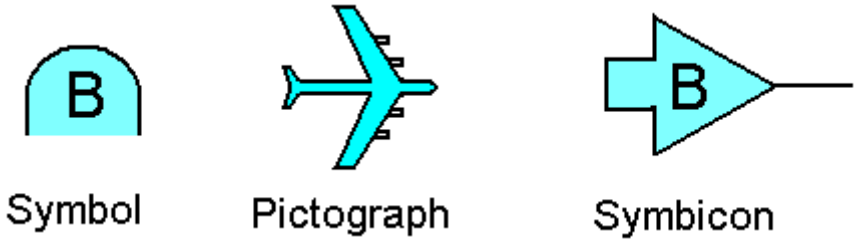

FIGURE K-7. Example of a symbicon.

K.5.2 Pseudo-three-dimensional models. Many systems are starting to use 2.5D models to represent military objects, rather than the 2D symbols contained in MIL-STD-2525 (see figure K-8). Models may work well for portrayal of individual platforms or systems, such

[3] Symbicons: Advanced Symbology for Two-dimensional and Three-dimensional Displays, SPAWAR TR 1850, February 2001

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

as a tank or aircraft, but models work less well or may be impractical for symbolizing larger units. Although in general users prefer to look at realistic icons, they result in slower, error-prone performance.[4] The level of detail provided by the model may also create recognition problems in the display that reflect the situation in the real world. For example, if an operator were unfamiliar with the appearance of a particular weapons system, it would not make much sense to use a 2.5D model of that weapons system to identify the equipment type. You would also expect recognition errors to occur if two weapons systems were similar in appearance. Overall, traditional symbols were more useful when determining platform identity and affiliation are required. Icons are better for determining some aspects of direction of movement.[5]

FIGURE K-8. Examples of pseudo-three-dimensional models.

K.5.2.1 Modeling and Simulation (M&S) standards. The International Organization for Standardization (ISO) 18023, Computer Graphics and Image Processing – Synthetic Environment Data Representation and Interchange Specification (SEDRIS) suite of standards are used for the exchange of modeling and simulation data.

K.5.2.2 Model libraries. The DOD maintains several libraries of reusable digital models of weapons systems at:

a. Army Model Exchange: https://modelexchange.army.mil

b. M&S Glossary: http://www.msco.mil/MSGlossary_ABR_M.html

c. M&S Coordination Office: http://msco.mil/

d. M&S Resource Repository System: http://www.msco.mil/resource_discovery.html

K.5.3 Design considerations for symbology in a 2.5D display.

K.5.3.1 Symbol location. One important function of a symbol is to indicate where the object is located. MIL-STD-2525, Section 5.3.11 requires that point icons be positioned so the

[4] Smallman, H.S., St. John, M.B., Oonk, H.M. and Cowen, M.B. (2000) Track recognition using two-dimensional symbols or three-dimensional realistic icons. SPAWAR Technical Report 1818.
[5] Searching for Tracks Imaged as Symbols or Realistic Icons: A Comparison Between Two-Dimensional and Three-Dimensional Displays, SPAWAR TR 1854, April 2001

Source: https://assist.dla.mil -- Downloaded: 2015-09-19T09:30Z
Check the source to verify that this is the current version before use.

geometric center, or center of mass of the symbol, corresponds to the actual location of the object. Certain other control measure symbols have specified "anchor points" that differ from the center of mass of the symbol.

K.5.3.1.1 Submergence of symbols. If a symbol is overlain on the terrain "terrain draping," it is possible to tie the center of mass of the symbol to the symbol location as in a two-dimensional display and conform to the general rules of MIL-STD-2525. If, however, the symbols are billboarded or shown vertically, then linking the symbol location to the center of mass of the symbol will result in the bottom half of the symbol being below the terrain surface. Billboarding displays generally place bottom of the symbol on the terrain surface. This problem does not occur if the object is an air or sub-surface track and is far enough above or below the terrain surface (ground/water).

K.5.3.1.2 Height above/below terrain surface. Some 2.5D displays use the "lollipop" technique to elevate symbols a fixed distance above the terrain surface. This works well for ground tracks but may cause confusion if ground and air tracks were shown in the same display, since some symbols will be raised an arbitrary height while air tracks will generally show actual altitude of the track.

K.5.3.1.3 Estimating track position. Studies have shown that estimating a track position in a 2.5D display is difficult because many of the visual cues that the human brain uses to estimate a location cannot be duplicated in a 2.5D digital display. Operator performance is increased if artificial cues are added, typically a drop line or drop shadow. A drop line is a vertical line from the above-surface object to the terrain surface. A drop shadow is a silhouette of the object on the terrain surface. These artificial cues can contribute to display clutter. Even two-dimensional displays will benefit by having a distinct "locator point" on the symbol, rather than just using the center of mass of the symbol.[6]

K.5.3.2 Perspective. In a traditional two-dimensional (map-like) display, the perspective is "orthogonal" or viewed from directly overhead; so, there is no change of scale over the display. In a 2.5D view the scale of the display decreases (gets smaller) as distance from the observer increases. This creates difficulty in perceiving the actual location of an object in space. In a two-dimensional display, the elevation of an object is not obvious, but the horizontal position (x,y coordinates) is not in doubt. In a 2.5D display, the latitude, longitude and elevation (x, y and z) aspects of location are each ambiguous. When viewing an object in the real world, a human observer uses a number of visual cues to determine location in three-dimensional space. Objects become smaller with increasing distance. Illumination provides variation in light and dark to specify shape in depth. Closer objects block out objects that are farther away. People see in stereo vision and can judge how far away an object is based on the slight differences in the image in their right and left eyes. In a digital display, many of these real-world cues are impossible or impractical to reproduce. Varying symbol size with distance and closer objects obscuring more distant objects are the most easily implemented visual cues. These visual cues have limitations when implemented in a digital display. Symbols can only be made so small before they becomes unrecognizable, yet exaggerating their size to make them more legible

[6] Track Location Enhancements for Perspective View Displays, SPAWAR TR 1847, December 2000

distorts the appearance of location, making them appear closer than they really are. Closer symbols obscuring symbols that are farther away also makes legibility difficult. Artificial visual cues, not found in the real world but possible on a digital display, such as drop lines and drop shadows (discussed previously), enhance a human's ability to determine the location of an object in a 2.5D display.[6]

K.5.3.3 Direction indicators. In a 2.5D display, the viewing angle is variable, dependent on the viewing position selected by the operator. Typical viewing angles range from 25 to 65 degrees. Unlike map displays, where north is generally displayed oriented to the top of the display, the 2.5D display can be viewed from any direction. In a "fly-through" the viewing direction is changing frequently. There are several methods to provide a visual cue for direction of view, including placing north arrows in the display or showing the heading and attitude in a "heads-up display" type symbol (see figure K-9).

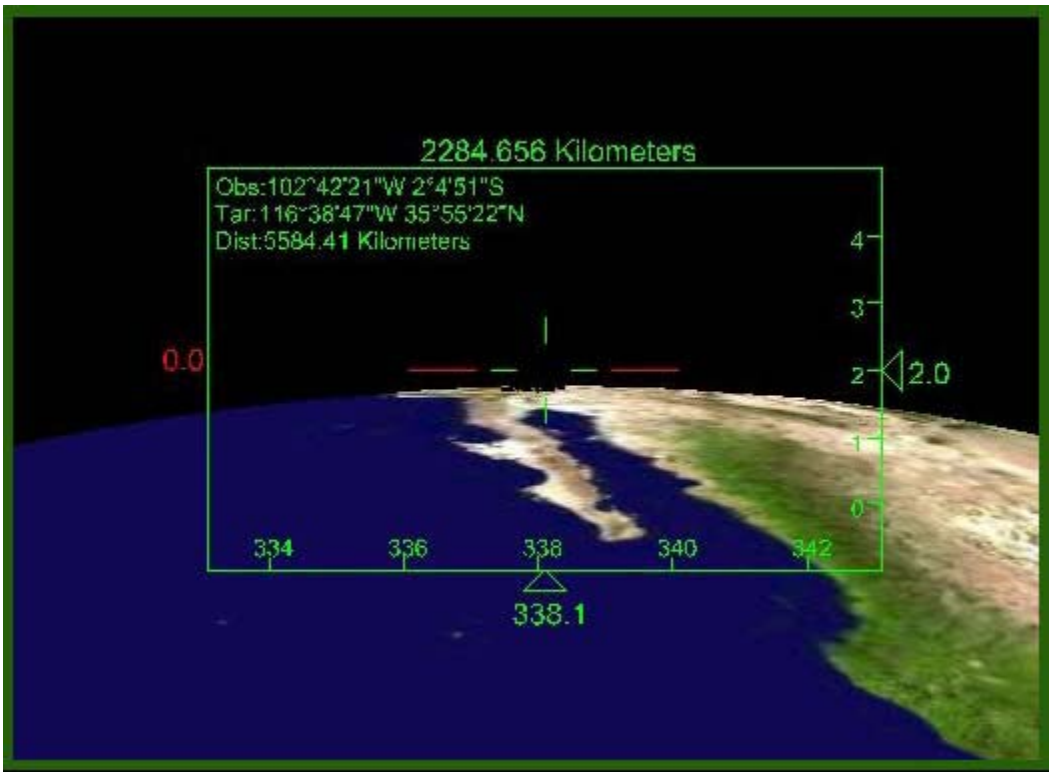

FIGURE K-9. Example of visual cue for direction of view. (TOC 3D display)

K.5.4 Text amplifiers for symbols. Many symbols in MIL-STD-2525 have text fields around them to present additional information. Text fields for point icons are defined in Figure 3 of MIL-STD-2525. Text fields are also found on the control measure symbols and control measures. Showing text around symbols in a 2.5D display creates a number of difficulties. Perhaps the greatest is the perspective in the display. One of the visual cues to create the impression of three dimensions is to show objects that are farther away in a smaller size; however, reducing symbol size, including text, also reduces legibility. Occultation is another visual cue, in which closer objects obscure more distant objects. Closer objects with text around

Check the source to verify that this is the current version before use.

them just create a larger “footprint” in the visual plane, potentially obscuring distant symbols or terrain features. Finally, the text will only be visible if there is enough contrast between the text and the background.

K.5.5 Speed vectors and trailing lines. A speed vector is a line extending in front of a symbol or icon, whose length is proportional to the speed of the object. The speed vector is an easy way to symbolize the speed and the heading of the platform. They are generally used on fast-moving platforms such as air tracks. A trailing line is a line showing the track of a platform, indicating where it has been for a period of time in the past. In a 2.5D perspective display, the record of a track of a platform is sometimes enhanced by using drop lines to indicate the position on the terrain surface. Drop lines are sometimes filtered by time to show only a limited trail and to reduce display clutter.

K.5.6 Incomplete data. One of the difficulties facing implementers of 2.5D displays is that sometimes the track data being symbolized may be incomplete. For example, the latitude and longitude of an air track may be known, but the altitude unknown. This is not a great problem in an overhead two-dimensional display, but in a 2.5D display, where should the air track be shown? If the direction of travel is unknown, which direction should be symbolized? The implementer might choose to ignore the missing data (show the air track on the ground) or infer it from other sources. In either case, a warning indicator should be included with the symbol to indicate to the operator that the track has been symbolized based on incomplete information.

K.5.7 Vertical exaggeration of terrain and tactical symbols. In 2.5D displays, the vertical dimension is often exaggerated to highlight variation in the terrain (see figure K-10). This particular example has a vertical exaggeration of x15. This vertical exaggeration may create distortions in the display, when tactical symbols are also used. For example, if the vertical exaggeration was x3, then the altitude of the air track would also have to be exaggerated by x3 to keep relative position with the terrain.

FIGURE K-10. Example of vertical exaggeration. (TOC 3D display)

K.5.8 Implications for training and doctrine. The use of 2.5D displays in the command and control community is growing. Research into human performance has shown, however, that a 2.5D display is not necessarily the best way to accomplish all tasks. In fact, some tasks are better performed using a conventional "overhead" 2D display or even a conventional map. The types of tasks performed on a C4ISR system should be conducted using a display mode (2D or 2.5D) that best fits the intended task. Operators should be trained to understand which tasks are accomplished best using each display type. User preference often has little bearing on the choice because an operator may like one type of display, even though his/her performance is degraded, compared to other display modes. Some tasks may be accomplished best using a combination of 2.5D to get an overall impression of the situation and 2D views to do the specific locational analysis needed to accomplish the task.

K.6 NOTES

K.6.1 Graphics displayed in this appendix are from the 3D Visualization and Tactical Symbology Considerations for Command, Control, Communications, Computers, Intelligence, Surveillance and Reconnaissance (C4ISR) Applications, Concurrent Technologies Corporation (CTC) White Paper, April 2, 2004.

APPENDIX L - CYBERSPACE SYMBOLS

L.1 SCOPE

L.1.1 Scope. This appendix addresses symbols that support cyberspace in the C2 domain. The tables in this appendix present the icons for the cyberspace domain. This appendix is a mandatory part of the standard. The information contained herein is intended for compliance.

L.2 APPLICABLE DOCUMENTS

Specific documents in 2.2 of this standard apply to this appendix.

L.3 DEFINITIONS

The definitions in section 3 of this standard apply to this appendix.

L.4 GENERAL REQUIREMENTS

L.4.1 Organization. This appendix contains technical specifications, a symbol coding scheme, a symbology hierarchy and cyberspace symbology.

L.5 DETAILED REQUIREMENTS

L.5.1 Technical specifications. Composition, construction and display of symbols are explained in the detailed requirements section of the standard.

L.5.2 Symbol identification coding scheme. A symbol identification code (SIDC) is a numeric string that may be used to provide the unique identifier necessary to display or exchange symbol information between MIL-STD-2525 compliant systems. Refer to Appendix A for SIDC positions and descriptions.

L.5.3 Composition of cyberspace symbols. A standard method for constructing symbols is presented. Refer to 5.3.8 for an explanation of symbol composition. Figure L-1 shows an example of a cyberspace symbol.

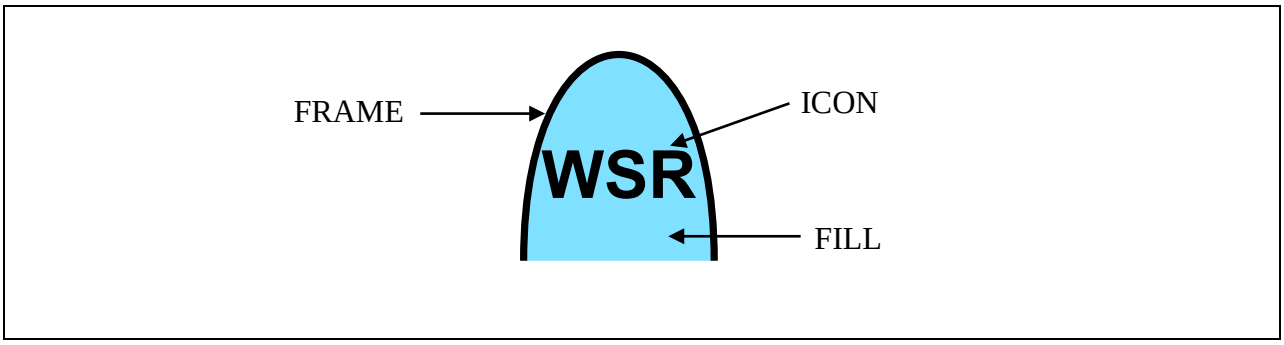

FIGURE L-1. Cyberspace symbol components.

Check the source to verify that this is the current version before use.

L.5.3.1 Symbol building process. Table L-I depicts the symbol building process for cyberspace symbols. The process is identical for icons and modifiers requiring the vertical bounding octagon.

TABLE L-I. Cyberspace symbol building process.

STEP	DESCRIPTION	EXAMPLE
1.	Choose the frame that matches the standard identity of the object from the appropriate dimension column in tables I, II, or III. In this example, the standard identity is friend and the dimension is air. The example depicts a “friendly air track.”	2.	Choose an icon for the main sector of the bounding octagon. In this example, the icon is “web server,” a cyberspace entity type. The example depicts a “friendly air web server.” Note: There are no modifiers in cyberspace symbols.	
3.	The finished symbol will appear as shown in the example.	
L.5.3.2 Icons and modifiers. All icons shall be placed within the main sector of the bounding octagon (see table L-I). There are no modifiers in cyberspace symbols.

L.5.3.3 Amplifiers. The display of additional alphanumerical and graphical information on identity, movement and location and capabilities of a cyberspace symbol is dependent on the dimension of that symbol. A cyberspace symbol may be in the space, air, land, sea surface, or subsurface dimension. For example, if the cyberspace symbol is in the space dimension, then that symbol shall follow the amplifier requirements as stated in the space appendix. See 5.1.6 for more information on amplifiers.

L.6 CYBERSPACE SYMBOLS

L.6.1 Cyberspace symbols. This section includes the lists of icons and modifiers for building cyberspace symbols.
